

The Contracting Playbook -- Premium Edition

Eighteen workflows from the 7pm inbound lead to multi-crew rollout, change-orders, estimator scripts, and AI-assisted marketing copy -- built for general contractors, remodelers, and multi-crew operators.

What's inside

All Starter workflows and prompts

Estimator scripts and crew handoff checklists

Crew-team rollout checklist for 2-20 crew members

AI-assisted marketing copy templates (email, social, lead-gen)

12 months of free updates — every improvement ships to your inbox

18 workflows · 18 copy-paste AI prompts & scripts · AI stack setup · 12 months of free updates

SkillForge AI — 2026 Edition

AI STACK

Your AI Stack — What to Buy, What to Skip

"AI stack" is just a fancy way of saying "the AI tools you pay for." Yours is short. That's the point.

Buy this: one chatbot subscription

Pick one of these. Either is fine. They both do everything in this book.

- ChatGPT Plus (OpenAI) — around \$20/month at the time of writing; check current pricing.
- Claude Pro (Anthropic) — around \$20/month at the time of writing; check current pricing.

That's it. One subscription, about twenty bucks a month. Everything in this playbook — every prompt, every workflow — runs on it.

Why paid instead of free?

The free versions work, but they cut you off when you use them heavily and they're slower during the day. For a business tool you lean on between jobs, the paid tier is worth it. Twenty dollars is less than the profit on a single job.

Phone or computer? Both.

Install the app on your phone — that's where you'll use it most, standing on a job site dictating notes. Use the website on your computer for longer writing sessions.

Maybe later: AI phone answering

If missed calls are your biggest leak — and for most contractors they are — an AI receptionist service that answers when you can't is the highest-return upgrade after the chatbot. It answers, takes the details, books the appointment, and texts you a summary.

This book doesn't recommend a specific provider, because the market moves fast and pricing changes. When you're ready, shop for one the way you'd shop for any subcontractor: get three options, ask what happens on a call you can't take at 2 PM on a Tuesday, and make sure you can listen to real sample calls before you commit.

Do not buy this on day one. Get comfortable with the chatbot first. Add phone answering later, once you've felt the savings.

AI STACK

Your AI Stack — What to Buy, What to Skip

Skip all of this

- "AI-powered" CRM or dispatch software sold to contractors. Your scheduling problem is solved with the chatbot and the system you already have. Don't buy new software to fix a workflow problem.
- AI logo makers, AI website builders, AI business-card designers. Vanity purchases. They don't book jobs.
- Multiple chatbot subscriptions. You need one. ChatGPT and Claude is paying twice for the same thing.
- Anything that claims to "check building-code compliance" or "verify structural calculations." Your license is on the line — code answers come from the code book and your building department, not a chatbot.

The stack, summarized

What	Cost	When
One chatbot subscription (ChatGPT Plus or Claude Pro)	~\$20/month	Day one
AI phone answering	Varies — shop around	Later, only if missed calls are your top leak
Everything else	\$0	Skip it

Your total starting cost: about \$20/month. If this book saves you a single hour this month, it has paid for itself several times over.

Set it up once: teach the chatbot your business

Both ChatGPT and Claude let you save "custom instructions" — background info the AI remembers every time. Spend five minutes on this once, and every prompt in this book gets better, because the AI already knows who you are.

Fill this in and paste it into the custom instructions (usually under Settings → Personalization or similar):

I own [YOUR COMPANY NAME], a general contracting business serving [SERVICE AREA]. We do residential remodels and multi-crew projects: kitchens, additions, and renovations. My customers are homeowners — non-technical. When you write for me: plain language, warm but professional tone, no jargon without explanation. Never invent technical specifications, prices, or timelines I didn't provide. Keep customer-facing writing short — under the word count I specify.

WORKFLOW 01 OF 18

30-Minute Kitchen Quote -- From One-Page Scope

A two-step prompt that turns a one-page scope (square footage, cabinet line, counter material, fixture grade, scope of demo and electrical) into a one-page proposal the homeowner can sign before the second site visit.

Estimated time-to-run: 30 minutes per quote

1 ChatGPT or Claude

HOW TO INPUT

1. Gather the one-page scope from the site visit (room dimensions, cabinet line, top material, fixture package, electrical scope).
2. Open ChatGPT or Claude with the recent material-cost reference open.
3. Paste the scope bullets and the prompt below.
4. Use the output to draft the proposal page in your CRM.

PROMPT

You are a general contractor pricing a single-family kitchen remodel. Below is the one-page scope. Generate the proposal as four blocks: (1) the one-paragraph project description a homeowner can sign off on without redlines; (2) the line-item budget broken into SIX buckets (cabinetry, counters, fixtures, demo and electrical, install labor, project management), each with a single subtotal -- no vendor line items, that goes in internal-only docs; (3) one block naming the three most common change-orders for this scope, with a one-line justification for each (e.g. "subfloor replacement" if the scope notes water damage); (4) the timeline block naming the 6-week phases in order with one week per phase (demo, rough-in, cabinet set, counter template, fixture install, punch). Numbers, no narrative filler. Scope: [PASTE SCOPE].

EXPECTED OUTPUT

A 4-block kitchen proposal with subtotals, three change-order risks, and a 6-week phase timeline.

Step time estimate: 20 minutes

WORKFLOW 02 OF 18

5-Touch Post-Quote Follow-Up -- The Silent Stage

A five-touch post-quote follow-up cadence that lifts close rate by recognizing the silent stage (between proposal delivery and the homeowner replying) -- instead of sending "just checking in" emails the homeowner ignores.

Estimated time-to-run: 15 minutes to set up; runs per quote

1*ChatGPT or Claude*

HOW TO INPUT

1. Open the prompt at the moment the proposal is delivered.
2. Paste the proposal date and the value-engineering item you flagged in the proposal.
3. Replace [HOMEOWNER NAME] and the placeholders.
4. Queue the 5 messages in your CRM as a triggered post-quote sequence.

PROMPT

You are a general contractor running the 5-touch post-quote follow-up. Generate the sequence for the homeowner below: (1) Day 1 -- proposal delivery acknowledgment, under 80 words, names the proposal total and one value-engineering item the homeowner can opt to add or drop (e.g. "soft-close drawers," "quartz vs granite"); (2) Day 4 -- a one-line "any questions on the cabinetry section?" reply-prompt under 30 words; (3) Day 10 -- a one-paragraph email that introduces the project timeline in plain English and names the one decision the homeowner needs to make this week to keep the next available install slot (e.g. "fixture finish" or "cabinet hardware"); (4) Day 21 -- the value-engineering follow-up that proposes one substitution that lowers the proposal by a specific dollar amount without changing the visible scope; (5) Day 35 -- the soft close, one last email under 90 words that acknowledges timing might not be right and offers a 6-month hold on the quote. Tone: direct, calm, no exclamation points, no filler adjectives. Homeowner: [HOMEOWNER NAME]. Proposal total: [PROPOSAL TOTAL]. Value-engineering item: [VE ITEM].

EXPECTED OUTPUT

A 5-message sequence with day, subject, body, and a one-line CTA per message.

Step time estimate: 15 minutes

WORKFLOW 03 OF 18

6-Week Subcontractor Sheet -- The Schedule Build

A 6-week subcontractor schedule the PM can paste into the subcontractor portal without an Excel macro. Each week has a lead trade (the one whose prep blocks the rest), a day-by-day task list, and the one inspection window.

Estimated time-to-run: 20 minutes per project

1*ChatGPT or Claude*

HOW TO INPUT

1. Open the prompt at the week-before-kickoff mark.
2. Paste the project start date and the lead trade sequence.
3. Replace [PROJECT START DATE] and the placeholders.
4. Save the output as the lead-trade schedule for the team.

PROMPT

You are a general contractor building the 6-week sub schedule for a kitchen project starting [PROJECT START DATE]. Generate the schedule as a 6-row table (Week | Lead Trade | Day-by-Day Tasks | Inspection). The lead trades appear in this order: demo + electrical rough-in (week 1), plumbing rough-in (week 1.5), drywall + paint (week 2-3), cabinet set (week 3.5), counter template + install (week 4), fixture trim + punch (week 5-6). For each week, day-by-day tasks must be specific verbs (no "as needed"), and the inspection row names the specific code inspection required that week (electrical rough-in, plumbing rough-in, drywall, final). Tone: precise, no filler adjectives, no "as needed".

EXPECTED OUTPUT

A 6-row sub schedule table with lead trades, day-by-day tasks, and named inspection windows.

Step time estimate: 20 minutes

WORKFLOW 04 OF 18

Warranty Callback -- The 48-Hour Acknowledgment

A two-step warranty callback workflow that responds to a homeowner warranty request within 48 hours, schedules the service visit, and converts the callback into a referral opportunity without sounding transactional.

Estimated time-to-run: 8 minutes per callback

1*ChatGPT or Claude*

HOW TO INPUT

1. Open the prompt at the moment the warranty call comes in.
2. Paste the homeowner's warranty concern (cabinet hinge, drawer slide, fixture drip).
3. Replace [HOMEOWNER NAME] and the placeholders.
4. Send the SMS within 2 hours and the email within 24.

PROMPT

You are a general contractor running the warranty callback workflow. Generate two outputs: (1) a 3-sentence SMS under 160 characters for the homeowner below that names the specific warranty item in plain English, anchors the next-step (a 30-minute service-window visit within 48 hours), and ends on a one yes/no question; (2) a follow-up email under 200 words that opens by naming the warranty item, lists the 3 most likely causes for that specific item (cabinet hinge loose, drawer slide worn, fixture seal failing -- whichever fits), and closes with a one yes/no question about whether they want one other small item checked while the tech is on site. Tone: confident, calm, no exclamation points, no "we appreciate your patience". Homeowner: [HOMEOWNER NAME]. Item: [WARRANTY ITEM]. Service slot: [SERVICE SLOT].

EXPECTED OUTPUT

A SMS and an email -- both ending on a single yes/no question.

Step time estimate: 8 minutes

WORKFLOW 05 OF 18

Annual Proposal Renewal -- The Off-Season Stay-Warm Plan

A quarterly off-season email plan that keeps the contractor top of mind with past clients during the slow season (winter, late summer). Each email has a season-specific home maintenance tip and one low-pressure call to action.

Estimated time-to-run: 20 minutes to set up; runs quarterly

1 ChatGPT or Claude

HOW TO INPUT

1. Open the prompt at the start of the slow season.
2. Paste the past-client list (1-3 short detail lines per client).
3. Replace [MONTH] and the placeholders.
4. Queue the 4 emails in your CRM as a quarterly stay-warm sequence.

PROMPT

You are a general contractor running the off-season stay-warm plan for [MONTH]. Below is the past-client list. Generate the 4-email quarterly sequence as a 4-row table (Client | Email Subject | Email Body -- 1 sentence teaser). Each email: (1) opens with a [MONTH]-specific home maintenance tip that is short, useful, and not a sales pitch (e.g. "check the caulk around the kitchen sink before the [MONTH] cold snap"); (2) names one specific scope the contractor actually did for this client (e.g. the kitchen cabinet refit, the bathroom tile replacement) -- use the detail from the past-client list; (3) closes with one yes/no question about whether they want a 15-minute walk-through of that scope to look for any follow-on work. Tone: warm, conversational, no urgency pressure, no exclamation points. Past-client list: [PASTE].

EXPECTED OUTPUT

A 4-row quarterly stay-warm table with past clients, subjects, and teasers tied to original project scope.

Step time estimate: 20 minutes

WORKFLOW 06 OF 18

Estimator Script -- The 20-Minute Walkthrough

A one-step prompt that turns a 20-minute walkthrough into a line-item estimate with three pricing tiers (good/better/best), the per-tier margin, and the one tier the estimator should recommend given the client's budget signals.

Estimated time-to-run: 25 minutes per estimate

1*ChatGPT or Claude*

HOW TO INPUT

1. Open the prompt in the truck cab after the walkthrough.
2. Paste the walkthrough notes (rooms, scope per room, materials discussed, client budget signal).
3. Replace the placeholders.
4. Email the estimate within 24 hours of the walk.

PROMPT

You are a contractor estimator pricing a 20-minute walk. Below is the walkthrough. Generate the estimate as three tiered blocks (Good / Better / Best). Each tier: (1) a one-line material palette summary; (2) a 5-row line-item table (Labor, Material, Sub, Permit, Disposal) with dollar totals; (3) the per-tier margin percent; (4) a 7-day schedule block (crew size, days on site). After the three tiers, one block: which tier to recommend given the client's budget signal, with a one-line justification. Plain English, numbers only. Walk: [PASTE].

EXPECTED OUTPUT

A 3-tier estimate with line items, margins, schedule, and a recommended tier.

Step time estimate: 25 minutes

WORKFLOW 07 OF 18

Change-Order -- The Mid-Project Written Add

A one-step prompt that turns a mid-project discovery (rotted subfloor, hidden electrical, an added bath) into a written change-order with the original contract section reference, the new line items, and the schedule impact.

Estimated time-to-run: 12 minutes per change-order

1*ChatGPT or Claude*

HOW TO INPUT

1. Open the prompt the moment the crew flags an out-of-scope discovery.
2. Paste the original contract section, the discovered item, and the crew + material delta.
3. Replace the placeholders.
4. Hand the change-order to the client before the crew leaves the site.

PROMPT

You are a contractor writing a mid-project change-order. Below is the original contract section, the discovered item, and the delta. Generate the change-order as four blocks: (1) a one-paragraph scope amendment that references the original contract section by number and names the discovered item; (2) a 4-row line-item table (Labor, Material, Sub, Permit) with dollar totals; (3) a one-sentence schedule-impact line ("adds N working days to the original end date of [END DATE]"); (4) a signature block the client signs on-site. Plain English. Original section: [PASTE]. Discovered: [PASTE]. Delta: [PASTE].

EXPECTED OUTPUT

A 4-block change-order with scope amendment, line items, schedule impact, and signature block.

Step time estimate: 12 minutes

WORKFLOW 08 OF 18

Crew Rollout -- The 2-20 Foreman Onboarding

A one-step prompt that builds a 2-week onboarding checklist for a new foreman or crew lead: week-1 shadow days, week-2 lead-under-supervision days, the 5 site-side decisions they own, and the 3 they escalate.

Estimated time-to-run: 15 minutes per new hire

1

ChatGPT or Claude

HOW TO INPUT

1. Open the prompt the day the new hire signs on.
2. Paste the new hire role, the crew, and the first project they will work on.
3. Replace the placeholders.
4. Print the checklist and pin it to the job trailer for the first 2 weeks.

PROMPT

You are a contractor building a 2-week onboarding checklist for a new foreman. Below is the role, the crew, and the first project. Generate the checklist as a 14-row table (Day | Activity | Supervisor | Sign-Off). Week 1 is shadow days: ride-along, tool + safety intro, watch the scope the crew is running that day. Week 2 is lead-under-supervision days: the new hire runs the day's scope with the supervisor on site as backup, daily debrief at end of day. After the table, one block: the 5 site-side decisions the new hire owns (scope-confirm, crew-break timing, materials-on-truck check, subcoordination, day-end photo) and the 3 they escalate (price change, change-order scope, weather cancellation). Plain English. Role: [PASTE]. Crew: [PASTE]. First project: [PASTE].

EXPECTED OUTPUT

A 14-row onboarding checklist with daily activities, plus the 5 owned vs 3 escalated decisions.

Step time estimate: 15 minutes

WORKFLOW 09 OF 18

Multi-Crew Rollout -- The 3-Crew Daily Board

A one-step prompt that turns the active project list into a 3-crew daily board: per-crew project assignment, the one trade sub each crew needs that day, the materials each crew must grab from the shop, and the one project at risk of slipping.

Estimated time-to-run: 20 minutes per day

1

ChatGPT or Claude

HOW TO INPUT

1. Open the prompt every morning at 6am in the shop.
2. Paste the active project list (3-8 projects, each with stage + sub-trade needed today).
3. Replace the placeholders.
4. Pin the board to the shop wall + text each crew lead their assignment.

PROMPT

You are a contractor building the 3-crew daily board. Below is the active project list. Generate the board as a 3-row table (Crew | Project | Sub on Site | Materials to Grab). Each row: (1) assigns one crew to one project for the day; (2) names the one trade sub each crew needs that day (plumber, electrician, drywall, etc.); (3) lists the materials each crew must grab from the shop before roll-out. After the table, one block: the one project at risk of slipping today (the project whose schedule has the least slack) with a one-line justification and the one decision the contractor must make before 8am. Plain English. Project list: [PASTE].

EXPECTED OUTPUT

A 3-row crew daily board with sub + materials per crew, plus the at-risk project of the day.

Step time estimate: 20 minutes

WORKFLOW 10 OF 18

Lead-Gen Email -- The Past-Client 90-Day Touch

A one-step prompt that builds a 90-day past-client touch email from a completed project: a one-line "remember us" opener, a 3-bullet "what we shipped for you" block, and a single ask for a referral or a new project walkthrough.

Estimated time-to-run: 10 minutes per past-client

1*ChatGPT or Claude*

HOW TO INPUT

1. Open the prompt 90 days after a project closed.
2. Paste the project name, the scope one-liner, and the completion date.
3. Replace the placeholders.
4. Send the email same-day.

PROMPT

You are a contractor writing a 90-day past-client touch email. Below is the completed project. Generate the email as three blocks: (1) a one-line opener that names the project + the completion month; (2) a 3-bullet "what we shipped for you" block, each bullet a one-line scope summary with the material installed (no dollar totals, no client names); (3) a single ask -- one yes/no question about whether they want a walkthrough for a new project OR a referral to a neighbor. Tone: warm, plain English, no exclamation points, no urgency. Under 200 words. Project: [PASTE].

EXPECTED OUTPUT

A 3-block 90-day past-client email with opener, scope bullets, and one ask.

Step time estimate: 10 minutes

WORKFLOW 11 OF 18

Social Post -- The In-Progress Project Tease

A one-step prompt that turns a mid-project progress photo into an Instagram / Facebook post: a one-line hook, a 3-bullet "what changed this week" block, and the one call-to-action line that points at the estimate form.

Estimated time-to-run: 8 minutes per post

1

ChatGPT or Claude

HOW TO INPUT

1. Open the prompt every Friday from the project site.
2. Paste the project scope one-liner, the week's progress, and the one detail that will land (a material reveal, a before/after).
3. Replace the placeholders.
4. Schedule the post for Saturday morning.

PROMPT

You are a contractor writing an in-progress project tease post. Below is the project + the week's progress. Generate the post as three blocks: (1) a one-line hook that names the project type (kitchen, bath, addition); (2) a 3-bullet "what changed this week" block, each bullet a one-line summary of a visible change; (3) a single call-to-action line that points at the estimate form. Tone: plain English, warm, no exclamation points. Under 320 characters. Project: [PASTE]. Progress: [PASTE].

EXPECTED OUTPUT

A 3-block social post under 320 characters with a hook, progress bullets, and a CTA.

Step time estimate: 8 minutes

WORKFLOW 12 OF 18

Bid Prep -- The 30-Minute Multi-Trade Estimate

A one-step prompt that turns a 30-minute bid walkthrough into a multi-trade estimate: per-trade line items (plumbing, electrical, HVAC, framing, drywall, finish), the trade sub each line relies on, and the one trade most likely to bust the budget.

Estimated time-to-run: 35 minutes per bid

1

ChatGPT or Claude

HOW TO INPUT

1. Open the prompt in the truck after the bid walkthrough.
2. Paste the walkthrough notes (scope per room, the trades involved, the timeline).
3. Replace the placeholders.
4. Send the bid within 48 hours.

PROMPT

You are a contractor pricing a 30-minute multi-trade bid. Below is the walkthrough. Generate the bid as a 6-row table (Trade | Scope | Sub | Labor Hours | Material | Dollar Total). Cover, in order: Framing, Plumbing, Electrical, HVAC, Drywall, Finish. Each row: (1) names the trade; (2) one-line scope from the walk; (3) the trade sub the line relies on (or "in-house" if no sub); (4) labor hours; (5) material dollar; (6) the row total. After the table, one block: the one trade most likely to bust the budget (the one with the highest unknown) with a one-line justification and the one contingency the bid should carry. Plain English. Walk: [PASTE].

EXPECTED OUTPUT

A 6-row multi-trade bid table plus the one trade at risk and the contingency to carry.

Step time estimate: 35 minutes

WORKFLOW 13 OF 18

Permit Pull -- The One-Page Scope Sheet

A one-step prompt that turns the project scope into a one-page permit-pull sheet: project description, scope of work, the trades involved, the inspection milestones, and the contact block the permit office needs.

Estimated time-to-run: 15 minutes per permit

1*ChatGPT or Claude*

HOW TO INPUT

1. Open the prompt the day the contract is signed.
2. Paste the project scope, the address, the trades involved, and the inspection milestones.
3. Replace the placeholders.
4. Print the sheet + submit it to the permit office.

PROMPT

You are a contractor preparing a permit-pull sheet. Below is the project scope. Generate the sheet as four blocks: (1) a one-paragraph project description (address, square footage, project type); (2) a numbered scope-of-work list (8-12 lines, each a one-line scope item per trade); (3) the inspection milestones (rough-in, insulation, final) with the trade each inspection covers; (4) the contact block (contractor name, license #, phone, email). Plain English, no filler. Scope: [PASTE].

EXPECTED OUTPUT

A 4-block permit-pull sheet with description, scope, inspections, and contact block.

Step time estimate: 15 minutes

WORKFLOW 14 OF 18

Sub Coordination -- The 7-Day Lookahead

A one-step prompt that turns the active project schedule into a 7-day lookahead for trade subs: per-day sub assignment, the scope each sub must complete, and the one material the sub must have on site to start.

Estimated time-to-run: 20 minutes per week

1

ChatGPT or Claude

HOW TO INPUT

1. Open the prompt every Friday afternoon.
2. Paste the active project schedule + the trade subs on each project.
3. Replace the placeholders.
4. Email each sub their 7-day lookahead same-day.

PROMPT

You are a contractor building a 7-day lookahead for trade subs. Below is the active schedule. Generate the lookahead as a 7-row table (Day | Project | Sub | Scope | Material to Have). Each row: (1) the day of the week; (2) the project name; (3) the trade sub assigned; (4) the scope they must complete that day; (5) the one material the sub must have on site to start. After the table, one block: the one sub whose schedule has the least slack (the one most likely to push the project) with a one-line justification and the one call the contractor must make Monday morning. Plain English. Schedule: [PASTE].

EXPECTED OUTPUT

A 7-row 7-day lookahead table with per-day sub assignment plus the at-risk sub of the week.

Step time estimate: 20 minutes

WORKFLOW 15 OF 18

Warranty Callback -- The 48-Hour Acknowledgment

A one-step prompt that turns a warranty callback into a 48-hour acknowledgment email: the issue summary, the crew visit schedule, the one thing the client must do before the crew arrives, and the one thing the contractor will cover at no charge.

Estimated time-to-run: 10 minutes per callback

1*ChatGPT or Claude*

HOW TO INPUT

1. Open the prompt the moment a warranty callback comes in.
2. Paste the project name, the issue, and the original completion date.
3. Replace the placeholders.
4. Email the client within 48 hours of the callback.

PROMPT

You are a contractor writing a warranty callback acknowledgment. Below is the callback. Generate the email as four blocks: (1) a one-line thank-you for reporting the issue + the issue summary in plain English; (2) the crew visit schedule -- the day the crew will be on site (within 7 days) and the visit window; (3) the one thing the client must do before the crew arrives (clear the area, take a photo, etc.); (4) the one thing the contractor will cover at no charge, with a one-line scope of the warranty coverage. Tone: warm, plain English, no exclamation points. Under 200 words. Callback: [PASTE].

EXPECTED OUTPUT

A 4-block warranty callback acknowledgment with issue, crew visit, client prep, and warranty scope.

Step time estimate: 10 minutes

WORKFLOW 16 OF 18

Job-Site Daily Log -- The End-of-Day Report

A one-step prompt that turns the crew lead's end-of-day notes into a written job-site daily log: work completed, materials used, the one thing that ran long, and the one thing tomorrow's crew should know.

Estimated time-to-run: 5 minutes per day

1*ChatGPT or Claude*

HOW TO INPUT

1. Open the prompt at 5pm in the job trailer.
2. Paste the crew lead's scratch notes from the day.
3. Replace the placeholders.
4. Email the log to the contractor + pin it to the project folder.

PROMPT

You are a contractor crew lead writing the end-of-day job-site log. Below is the day's scratch notes. Generate the log as four blocks: (1) a 3-row table of work completed (Trade | Hours | Material Used); (2) a one-paragraph "what ran long today" block; (3) a one-paragraph "what tomorrow's crew should know" block -- the one open item, the one tool to grab, the one sub to call before 8am; (4) a one-line equipment note. Tone: plain English, no filler. Notes: [PASTE].

EXPECTED OUTPUT

A 4-block end-of-day job-site log with work, overrun, tomorrow's heads-up, and equipment note.

Step time estimate: 5 minutes

WORKFLOW 17 OF 18

Project Closeout -- The Final Walkthrough Packet

A one-step prompt that builds a project closeout packet at final walkthrough: the punch-list, the warranty summary, the maintenance cadence the homeowner must follow, and the one ask for a referral + a review.

Estimated time-to-run: 20 minutes per project

1*ChatGPT or Claude*

HOW TO INPUT

1. Open the prompt the day before the final walkthrough.
2. Paste the project scope, the original contract sections, and the warranty terms.
3. Replace the placeholders.
4. Print the packet + walk the client through it at the final meeting.

PROMPT

You are a contractor preparing a project closeout packet. Below is the project. Generate the packet as four blocks: (1) a punch-list table (Item | Location | Status) with 5-10 items the walkthrough will check; (2) a one-paragraph warranty summary that names the warranty term, the items covered, and the items NOT covered; (3) a one-paragraph maintenance cadence the homeowner must follow (e.g. "caulk check every 6 months, paint touch-up every 2 years"); (4) a single ask for a referral + a Google review, with the review short-URL placeholder. Tone: warm, plain English. Project: [PASTE].

EXPECTED OUTPUT

A 4-block project closeout packet with punch-list, warranty, maintenance cadence, and referral ask.

Step time estimate: 20 minutes

WORKFLOW 18 OF 18

Off-Season Proposal Renewal -- The Stay-Warm Plan

A four-touch off-season cadence that keeps a past-client warm between projects. Month 1 check-in, Month 3 maintenance nudge, Month 6 seasonal project tease, Month 9 close -- each touch names the prior project and one open question.

Estimated time-to-run: 15 minutes to set up; runs per past-client

1

ChatGPT or Claude

HOW TO INPUT

1. Open the prompt 30 days after a project closed.
2. Paste the project name, the completion date, and the one seasonal project the client might consider next.
3. Replace the placeholders.
4. Queue the 4 touches in the CRM as a triggered off-season sequence.

PROMPT

You are a contractor running the off-season stay-warm cadence. Below is the completed project. Generate the 4-touch sequence as a 4-row table (Month | Channel | Message | Single Ask). Cover, in order: (1) Month 1 -- email check-in that names the project + the one open question ("how is the new space working?"); (2) Month 3 -- maintenance nudge email that names the one maintenance task the season requires (caulk check, paint touch-up, gutter clear); (3) Month 6 -- seasonal project tease email that names the one new project the client might consider (deck, bath, kitchen refresh) with a one-line scope + a one-line ballpark dollar; (4) Month 9 -- close email, one short paragraph that names the client's upcoming year + a single yes/no question about whether they want a walkthrough. Tone: warm, plain English. Project: [PASTE].

EXPECTED OUTPUT

A 4-row off-season stay-warm table with month, channel, message, and one ask per row.

Step time estimate: 15 minutes
