

The Dentistry Playbook -- Premium Edition

Seventeen workflows from the new-patient inquiry to multi-provider rollout, case-acceptance scripts, hygiene handoff, and AI-assisted patient comms -- built for practice owners, office managers, and multi-provider teams.

What's inside

All Starter workflows and prompts

Top-practice scripts: case acceptance, financial presentation, hygiene handoff

Multi-provider rollout checklist for 2-20 clinicians and front-desk staff

AI-assisted marketing copy templates (recall emails, social posts, Google reviews)

12 months of free updates — every improvement ships to your inbox

17 workflows · 17 copy-paste AI prompts & scripts · AI stack setup · 12 months of free updates

SkillForge AI — 2026 Edition

AI STACK

Your AI Stack — What to Buy, What to Skip

"AI stack" is just a fancy way of saying "the AI tools you pay for." Yours is short. That's the point.

Buy this: one chatbot subscription

Pick one of these. Either is fine. They both do everything in this book.

- ChatGPT Plus (OpenAI) — around \$20/month at the time of writing; check current pricing.
- Claude Pro (Anthropic) — around \$20/month at the time of writing; check current pricing.

That's it. One subscription, about twenty bucks a month. Everything in this playbook — every prompt, every workflow — runs on it.

Why paid instead of free?

The free versions work, but they cut you off when you use them heavily and they're slower during the day. For a business tool you lean on between jobs, the paid tier is worth it. Twenty dollars is less than the profit on a single new-patient visit.

Phone or computer? Both.

Install the app on your phone — that's where you'll use it most, between patients dictating notes. Use the website on your computer for longer writing sessions.

Maybe later: AI phone answering

If missed calls are your biggest leak — and for most practices they are — an AI receptionist service that answers when you can't is the highest-return upgrade after the chatbot. It answers, takes the details, books the appointment, and texts you a summary.

This book doesn't recommend a specific provider, because the market moves fast and pricing changes. When you're ready, shop for one the way you'd shop for any subcontractor: get three options, ask what happens on a call you can't take at 2 PM on a Tuesday, and make sure you can listen to real sample calls before you commit.

Do not buy this on day one. Get comfortable with the chatbot first. Add phone answering later, once you've felt the savings.

AI STACK

Your AI Stack — What to Buy, What to Skip

Skip all of this

- "AI-powered" scheduling or front-desk software sold to dental practices. Your recall and scheduling problem is solved with the chatbot and the system you already have. Don't buy new software to fix a workflow problem.
- AI logo makers, AI website builders, AI business-card designers. Vanity purchases. They don't book jobs.
- Multiple chatbot subscriptions. You need one. ChatGPT and Claude is paying twice for the same thing.
- Anything that claims to "read X-rays" or "diagnose from images." Clinical judgment stays with the clinician — full stop.

The stack, summarized

What	Cost	When
One chatbot subscription (ChatGPT Plus or Claude Pro)	~\$20/month	Day one
AI phone answering	Varies — shop around	Later, only if missed calls are your top leak
Everything else	\$0	Skip it

Your total starting cost: about \$20/month. If this book saves you a single hour this month, it has paid for itself several times over.

Set it up once: teach the chatbot your business

Both ChatGPT and Claude let you save "custom instructions" — background info the AI remembers every time. Spend five minutes on this once, and every prompt in this book gets better, because the AI already knows who you are.

Fill this in and paste it into the custom instructions (usually under Settings → Personalization or similar):

I own [YOUR PRACTICE NAME], a dental practice serving [SERVICE AREA]. We do general dentistry: new-patient exams, hygiene, restorative work, and treatment planning. My patients are non-technical. When you write for me: plain language, warm and reassuring tone, no clinical jargon without explanation. Never invent clinical findings, diagnoses, or treatment recommendations I didn't provide. Keep patient-facing writing short — under the word count I specify.

WORKFLOW 01 OF 17

7-Touch Case Acceptance -- The \$2,000 Treatment Plan

A seven-touch case-acceptance cadence for treatment plans over \$2,000 (crown, implant, ortho, multi-unit restoration). Each touch has a channel and a single ask.

Estimated time-to-run: 25 minutes to set up; runs per plan

1*ChatGPT or Claude*

HOW TO INPUT

1. Open the prompt at the moment the treatment plan is presented.
2. Paste the plan total and the patient insurance status.
3. Replace the placeholders.
4. Queue the 7 touches in your CRM as a triggered sequence.

PROMPT

You are the treatment-coordinator at a dental practice designing the 7-touch case-acceptance cadence for a plan over \$2,000. Below is the plan total and the patient insurance status. Generate the 7-touch sequence as a 7-row table (Day | Channel | Message | Single Ask). Cover, in order: (1) Day 0 -- thank-you text after the visit, one sentiment line, no ask; (2) Day 2 -- email with the plan summary PDF attached, single ask about whether the patient has questions on the staging; (3) Day 5 -- text that introduces the financing option (CareCredit or in-house plan -- whichever fits), no ask; (4) Day 9 -- call from the treatment coordinator, single ask about whether the patient is ready to schedule phase 1; (5) Day 14 -- email that ties to the insurance anniversary (name the patient's annual max), single ask about whether they want to use this year's benefit; (6) Day 30 -- text that closes with a specific date in the schedule the practice can hold (with a 7-day hold), single ask about whether to lock it; (7) Day 60 -- soft-close email, one sentence acknowledging timing might not be right, single ask about whether to revisit in 6 months at the hygiene recall. Tone: direct, calm, no exclamation points, no filler adjectives. Plan: [PLAN TOTAL]. Insurance: [INSURANCE STATUS].

EXPECTED OUTPUT

A 7-row case-acceptance table with day, channel, message, and a single yes/no ask per row.

Step time estimate: 25 minutes

WORKFLOW 02 OF 17

Post-Op Follow-Up -- The Day-1 Call

A two-touch post-op follow-up that catches the rare extraction complication (dry socket, infection, broken temp) within the 24-hour window when an in-person visit is still possible.

Estimated time-to-run: 6 minutes per post-op

1

ChatGPT or Claude

HOW TO INPUT

1. Open the prompt at the end of the day-of post-op visit.
2. Paste the procedure (extraction, implant, endo) and one detail the patient will remember.
3. Replace the placeholders.
4. Run the call within the next morning huddle.

PROMPT

You are the dental hygienist running the day-1 post-op follow-up call. Below is the procedure and the post-op detail. Generate a 90-second call script the hygienist reads out loud. Script must: (1) open with the patient's first name and the [PROCEDURE] they had yesterday; (2) ask three yes/no questions -- "is the bleeding stopped," "is the swelling where you expected," and "are you staying on the [MEDICATION] the doctor prescribed"; (3) if any answer is yes to a concerning sign, name the one thing the patient should do (call back, come in, send a photo); (4) close with one yes/no question about whether the patient is comfortable with the gauze routine. Tone: calm, plain English, no "how are you feeling" filler. Patient: [PATIENT FIRST NAME]. Procedure: [PROCEDURE]. Detail: [PASTE POST-OP DETAIL]. Medication: [MEDICATION].

EXPECTED OUTPUT

A 90-second call script with three yes/no checks and a clear escalation path.

Step time estimate: 6 minutes

WORKFLOW 03 OF 17

Insurance Verification -- The Pre-Visit Call

A pre-visit insurance verification that prevents the day-of surprise ("your insurance does not cover that") and tightens the patient's expected out-of-pocket to a specific number before they sit in the chair.

Estimated time-to-run: 12 minutes per new patient

1

ChatGPT or Claude

HOW TO INPUT

1. Open the prompt 48 hours before the new-patient visit.
2. Paste the insurance carrier and the planned procedure.
3. Replace the placeholders.
4. Send the email the morning before the visit.

PROMPT

You are the front-desk lead at a dental practice running the pre-visit insurance verification email. Below is the insurance carrier and the planned procedure. Generate a 180-word email that: (1) opens by confirming the visit tomorrow and naming the [PROCEDURE] planned; (2) names the two things the patient should have ready (their insurance card and the subscriber's date of birth -- for the verification call they can also pre-authorize); (3) names what the practice will cover in the verification (annual max used YTD, the [PROCEDURE] covered at X%, the patient's expected out-of-pocket estimate to within \$100); (4) closes with a yes/no question about whether they want the practice to send the verification result by text the morning of the visit. Tone: clear, no exclamation points. Patient: [PATIENT FIRST NAME]. Carrier: [CARRIER]. Procedure: [PROCEDURE].

EXPECTED OUTPUT

A 180-word pre-visit verification email with two bring-items and a clear estimated out-of-pocket range.

Step time estimate: 12 minutes

WORKFLOW 04 OF 17

Front-Desk Handoff -- The Morning Huddle Script

A 10-minute morning-huddle script the front-desk lead runs with the hygienists and doctors at the start of each day to lock the schedule, the confirmations, and the one oddly-shaped case on the books.

Estimated time-to-run: 10 minutes per day

1

ChatGPT or Claude

HOW TO INPUT

1. Open the prompt at the start of the morning huddle.
2. Paste today's schedule with patient name, procedure, and one quirk per row (insurance issue, language preference, fear, etc.).
3. Replace the placeholders.
4. Read the output aloud in the huddle.

PROMPT

You are the front-desk lead at a dental practice running the morning huddle script. Below is today's schedule. Generate a 10-minute huddle script with four blocks: (1) the schedule walk-through -- name each patient, procedure, and quirk in plain English (one sentence per row); (2) the confirmation list -- which patients have confirmed and which still need a call from the hygienist before 11am; (3) the one oddly-shaped case today -- the one patient who needs the most hand-holding (a pediatric first-visit, a nervous adult, a same-day treatment plan over \$2,000, etc.) -- name the patient and the one specific thing the front desk should prep for it; (4) the end-of-day walkthrough target -- the goal for the next-visit booking rate and the one hygiene rebook the team will focus on. Tone: brisk, conversational, no filler. Schedule: [PASTE SCHEDULE].

EXPECTED OUTPUT

A 4-block morning huddle script with schedule walk, confirmation list, oddly-shaped case prep, and end-of-day target.

Step time estimate: 10 minutes

WORKFLOW 05 OF 17

Same-Day Treatment Open Slot -- The 90-Minute Fill

A same-day fill workflow that recovers a 90-minute open slot (a cancellation, a no-show, a hygiene-cut-loose) by texting the recall queue and offering a specific same-day window.

Estimated time-to-run: 6 minutes per open slot

1*ChatGPT or Claude*

HOW TO INPUT

1. Open the prompt at the moment the open slot is confirmed.
2. Paste the three patients from the recall queue who have consented to same-day offers.
3. Replace the placeholders.
4. Send texts one-by-one, in chronological order of who said yes first.

PROMPT

You are the front-desk lead at a dental practice running the same-day treatment slot fill. Below is the open slot and the three recall-queue patients who consented to same-day offers. Generate a fill-the-gap SMS under 160 characters for each patient. Each SMS must: (1) open with the patient's first name only; (2) name the [SERVICE] the practice can fit in the [OPEN SLOT] window (cleaning, filling replacement, whitening, etc.); (3) ask one yes/no question about whether they want to grab the slot. No exclamation points, no urgency pressure, no "we had a cancellation." Patients: [PASTE THREE PATIENTS]. Service: [SERVICE]. Slot: [OPEN SLOT].

EXPECTED OUTPUT

Three 160-character same-day fill texts, each ending on one yes/no question.

Step time estimate: 6 minutes

WORKFLOW 06 OF 17

Case-Acceptance Script -- The \$5,000 Treatment Plan

A one-step prompt that turns a \$5,000 treatment plan into a case-acceptance script for the chairside conversation: the opener, the 3-bullet scope summary, the financial presentation block, and the one close question.

Estimated time-to-run: 15 minutes per treatment plan

1*ChatGPT or Claude*

HOW TO INPUT

1. Open the prompt the day before the patient returns for the case-acceptance conversation.
2. Paste the treatment plan scope, the dollar total, the insurance coverage, and the patient's financial concern.
3. Replace the placeholders.
4. Print the script + hand it to the provider before the patient sits.

PROMPT

You are a dental provider preparing a case-acceptance script for a \$5,000 treatment plan. Below is the plan. Generate the script as four blocks: (1) a one-sentence opener that names the specific tooth + the problem in plain English; (2) a 3-bullet scope summary (what the plan does, the materials, the timeline); (3) a financial presentation block -- the insurance coverage, the patient out-of-pocket, and the 3 payment options (pay-in-full discount, in-house monthly, third-party financing); (4) the one close question (a yes/no question about which payment option fits). Tone: warm, plain English, no clinical jargon, no exclamation points. Plan: [PASTE].

EXPECTED OUTPUT

A 4-block case-acceptance script with opener, scope, financial presentation, and close question.

Step time estimate: 15 minutes

WORKFLOW 07 OF 17

Financial Presentation -- The 3-Option Block

A one-step prompt that builds a financial presentation block for any treatment plan: insurance coverage, patient out-of-pocket, and the 3 payment options (pay-in-full, in-house monthly, third-party financing) -- each with the per-month dollar.

Estimated time-to-run: 10 minutes per treatment plan

1

ChatGPT or Claude

HOW TO INPUT

1. Open the prompt after the treatment plan is priced.
2. Paste the treatment plan dollar, the insurance coverage, and the in-house + third-party financing terms.
3. Replace the placeholders.
4. Print the block + pin it to the chart for the financial conversation.

PROMPT

You are a dental front-desk lead building the financial presentation block. Below is the treatment plan + the financing terms. Generate the block as a 3-row table (Option | Per-Month | Total Patient Cost). Cover, in order: (1) Pay-in-full -- the discount applied + the total patient cost; (2) In-house monthly -- the per-month dollar + the term + the total patient cost; (3) Third-party financing -- the per-month dollar + the term + the total patient cost (including any interest). After the table, one block: the one option the front-desk should lead with given the patient's financial concern, with a one-line justification. Plain English. Plan: [PASTE].

EXPECTED OUTPUT

A 3-row financial presentation table plus the recommended lead option.

Step time estimate: 10 minutes

WORKFLOW 08 OF 17

Hygiene Handoff -- The 6-Month Recall Block

A one-step prompt that turns a patient's hygiene visit into a hygiene handoff block: the next recall date, the one thing the hygienist must flag to the provider, the one thing the front-desk must book before the patient leaves.

Estimated time-to-run: 6 minutes per patient

1*ChatGPT or Claude*

HOW TO INPUT

1. Open the prompt in the op at the end of the hygiene visit.
2. Paste the patient's recall interval, the hygienist notes, and the provider's exam findings.
3. Replace the placeholders.
4. Hand the block to the front-desk before the patient leaves the chair.

PROMPT

You are a dental hygienist building the handoff block. Below is the visit summary. Generate the block as three blocks: (1) the next recall date -- 3, 4, or 6 months based on the patient's perio status, with a one-line justification; (2) the one thing the hygienist must flag to the provider (a watch area, a new restorative need, a occlusal concern) with a one-line clinical note; (3) the one thing the front-desk must book before the patient leaves (the recall appointment, a restorative appointment, a specialist referral). Tone: plain English, no filler. Summary: [PASTE].

EXPECTED OUTPUT

A 3-block hygiene handoff with recall date, provider flag, and front-desk booking.

Step time estimate: 6 minutes

WORKFLOW 09 OF 17

Multi-Provider Rollout -- The 2-Week Onboarding

A one-step prompt that builds a 2-week onboarding checklist for a new associate dentist or front-desk staff member: week-1 shadow days, week-2 lead-under-supervision days, the 5 chairside decisions they own, and the 3 they escalate.

Estimated time-to-run: 15 minutes per new hire

1

ChatGPT or Claude

HOW TO INPUT

1. Open the prompt the day the new hire signs on.
2. Paste the new hire role, the providers they will shadow, and the first patient day they will lead.
3. Replace the placeholders.
4. Pin the checklist to the office manager's desk for the first 2 weeks.

PROMPT

You are a dental practice owner building a 2-week onboarding checklist for a new hire. Below is the role, the providers, and the first lead day. Generate the checklist as a 14-row table (Day | Activity | Supervisor | Sign-Off). Week 1 is shadow days: sit with the provider, watch the patient flow, learn the charting system, learn the practice cadence. Week 2 is lead-under-supervision days: the new hire leads the patient on the schedule with the supervisor on site as backup, daily debrief at end of day. After the table, one block: the 5 chairside decisions the new hire owns (treatment plan presentation, financial conversation, hygiene handoff, recall booking, chart note) and the 3 they escalate (case-acceptance > \$5,000, complex restorative, patient complaint). Plain English. Role: [PASTE].

EXPECTED OUTPUT

A 14-row onboarding checklist with daily activities plus the 5 owned vs 3 escalated decisions.

Step time estimate: 15 minutes

WORKFLOW 10 OF 17

Recall Email -- The 6-Month Patient Nudge

A one-step prompt that builds a 6-month recall email for a patient due for hygiene: a one-line "you're due" opener, the one benefit the patient gets from the visit, and a single call-to-action line that points at the online scheduler.

Estimated time-to-run: 6 minutes per patient

1*ChatGPT or Claude*

HOW TO INPUT

1. Open the prompt the day the patient hits the 6-month recall window.
2. Paste the patient name, the last visit date, and the hygienist name.
3. Replace the placeholders.
4. Send the email same-day + queue a Day 7 SMS follow-up.

PROMPT

You are a dental front-desk lead writing a 6-month recall email. Below is the patient. Generate the email as three blocks: (1) a one-line opener that names the patient + the last visit month; (2) a one-sentence benefit block that names the one thing the hygiene visit catches early (a watch area, a perio pocket, a new restoration need); (3) a single call-to-action line that points at the online scheduler URL. Tone: warm, plain English, no exclamation points. Under 150 words. Patient: [PASTE].

EXPECTED OUTPUT

A 3-block 6-month recall email with opener, benefit, and scheduler CTA.

Step time estimate: 6 minutes

WORKFLOW 11 OF 17

Google Review Ask -- The Post-Op 14-Day Asker

A one-step prompt that turns a successful post-op visit into a 14-day Google review ask: a one-line thank-you, the one specific detail the patient should mention in the review, and the short-URL.

Estimated time-to-run: 5 minutes per patient

1*ChatGPT or Claude*

HOW TO INPUT

1. Open the prompt 14 days after a successful restorative visit.
2. Paste the patient first name, the provider name, and the one specific restoration detail (a crown, a filling, a bridge).
3. Replace the placeholders.
4. Send the SMS that morning.

PROMPT

You are a dental front-desk lead writing a 14-day Google review ask SMS. Below is the patient. Generate the SMS as three sentences under 160 characters total: (1) thank-you for the visit 14 days ago; (2) a short ask for a 3-line Google review that mentions the provider + the one specific restoration detail; (3) the Google Business profile short-URL. Tone: warm, plain English, no exclamation points, no urgency. Patient: [PASTE].

EXPECTED OUTPUT

A 160-character Google review ask SMS with thank-you, review ask, and short URL.

Step time estimate: 5 minutes

WORKFLOW 12 OF 17

Social Post -- The Before/After Reveal

A one-step prompt that turns a before/after photo pair into an Instagram / Facebook post: a one-line hook, a 3-bullet "what changed" block, and the one call-to-action line that points at the new-patient scheduler.

Estimated time-to-run: 8 minutes per post

1*ChatGPT or Claude*

HOW TO INPUT

1. Open the prompt the day a before/after photo pair is approved by the patient.
2. Paste the procedure type, the one detail that will land (a smile transformation, a single-tooth implant), and the practice name.
3. Replace the placeholders.
4. Schedule the post for Thursday morning.

PROMPT

You are a dental practice owner writing a before/after social post. Below is the procedure + the detail. Generate the post as three blocks: (1) a one-line hook that names the procedure type (veneers, implant, whitening) without clinical jargon; (2) a 3-bullet "what changed" block, each bullet a one-line patient-facing summary (no patient name, no tooth number); (3) a single call-to-action line that points at the new-patient scheduler URL. Tone: warm, plain English, no exclamation points. Under 320 characters. Procedure: [PASTE].

EXPECTED OUTPUT

A 3-block before/after social post under 320 characters with hook, bullets, and CTA.

Step time estimate: 8 minutes

WORKFLOW 13 OF 17

Insurance Verification -- The Pre-Visit Call

A one-step prompt that turns a patient's insurance card into a pre-visit insurance verification call script: the 4 questions to ask the carrier, the 3 patient financials to confirm, and the one coverage caveat to flag to the front-desk.

Estimated time-to-run: 12 minutes per new patient

1*ChatGPT or Claude*

HOW TO INPUT

1. Open the prompt 48 hours before the new patient's first visit.
2. Paste the insurance carrier, the group number, the subscriber, and the procedure the patient is scheduling for.
3. Replace the placeholders.
4. Print the script + hand it to the front-desk before the call.

PROMPT

You are a dental front-desk lead building a pre-visit insurance verification call script. Below is the patient's insurance. Generate the script as four blocks: (1) the 4 questions to ask the carrier (active eligibility, annual maximum remaining, deductible met, waiting period on the specific procedure); (2) the 3 patient financials to confirm (copay, coinsurance %, frequency limitation on the procedure); (3) the one coverage caveat to flag to the front-desk (a missing pre-auth, a waiting period, a frequency limitation); (4) the call opener (3 sentences). Tone: plain English, no filler.

Insurance: [PASTE].

EXPECTED OUTPUT

A 4-block insurance verification script with carrier questions, patient financials, caveat, and call opener.

Step time estimate: 12 minutes

WORKFLOW 14 OF 17

Treatment-Plan Presentation -- The Visual Aid

A one-step prompt that turns a treatment plan into a one-page visual aid for the chairside presentation: the tooth diagram, the 3 scope bullets, the financial block, and the one question to ask before the patient decides.

Estimated time-to-run: 15 minutes per treatment plan

1*ChatGPT or Claude*

HOW TO INPUT

1. Open the prompt the day before the treatment plan presentation.
2. Paste the tooth number, the procedure, the scope, and the dollar total.
3. Replace the placeholders.
4. Print the visual aid + pin it to the chart for the chairside conversation.

PROMPT

You are a dental provider preparing a one-page treatment-plan visual aid. Below is the plan. Generate the aid as four blocks: (1) the tooth diagram block -- a one-line description of the tooth + the procedure (e.g. "tooth #3, a full-coverage crown") so the dental assistant can draw it; (2) a 3-bullet scope summary (what the procedure does, the materials, the timeline); (3) the financial block -- insurance coverage, patient out-of-pocket, the 3 payment options; (4) the one question to ask before the patient decides (a yes/no question about timing or payment). Tone: warm, plain English, no jargon. Plan: [PASTE].

EXPECTED OUTPUT

A 4-block treatment-plan visual aid with tooth diagram, scope, financials, and decision question.

Step time estimate: 15 minutes

WORKFLOW 15 OF 17

Hygiene Reactivation -- The Silent-Patient Sequence

A one-step prompt that builds a 3-touch hygiene reactivation sequence for patients who haven't been in 12+ months: Day 0 email, Day 14 SMS, Day 30 call -- each touch names the last visit date and the one open recall item.

Estimated time-to-run: 12 minutes per patient

1

ChatGPT or Claude

HOW TO INPUT

1. Open the prompt for a patient whose last visit was 12+ months ago.
2. Paste the patient name, the last visit date, the hygienist name, and the one open recall item.
3. Replace the placeholders.
4. Queue the 3 touches in the practice CRM as a triggered reactivation sequence.

PROMPT

You are a dental front-desk lead building a hygiene reactivation sequence. Below is the patient. Generate the 3-touch sequence as a 3-row table (Day | Channel | Message). Day 0: email that names the last visit month + the one open recall item, with a single yes/no question about scheduling. Day 14: SMS under 160 characters that names the count of months since the last visit + the scheduler URL. Day 30: a call script for the front-desk (3 sentences: opener, the last visit + open recall, the one ask -- "can we get you on the schedule this month?"). Tone: warm, plain English, no urgency. Patient: [PASTE].

EXPECTED OUTPUT

A 3-row hygiene reactivation table with day, channel, and message per touch.

Step time estimate: 12 minutes

WORKFLOW 16 OF 17

Morning Huddle -- The 10-Minute Agenda

A one-step prompt that turns the day's schedule + the open chart flags into a 10-minute morning huddle agenda: the 3 patients to discuss, the one production goal, and the one operational heads-up.

Estimated time-to-run: 8 minutes per day

1

ChatGPT or Claude

HOW TO INPUT

1. Open the prompt 15 minutes before the morning huddle.
2. Paste the day's schedule, the open treatment plans, and the one operational flag (a missing supply, a staff absence, a room down).
3. Replace the placeholders.
4. Print the agenda + hand it to the office manager before the huddle.

PROMPT

You are a dental office manager building the morning huddle agenda. Below is the day's summary. Generate the agenda as four blocks: (1) the 3 patients to discuss (the one with an open treatment plan, the one with a financial concern, the one with a clinical flag); (2) the one production goal for the day (a dollar figure); (3) the one operational heads-up (a missing supply, a staff absence, a room down); (4) the one call to action for the team (the one thing the team must do today). Tone: plain English, no filler. Under 150 words. Summary: [PASTE].

EXPECTED OUTPUT

A 4-block morning huddle agenda with 3 patients, production goal, operational heads-up, and team CTA.

Step time estimate: 8 minutes

WORKFLOW 17 OF 17

Specialist Referral -- The Handoff Packet

A one-step prompt that builds a specialist referral handoff packet: the 3-bullet clinical summary, the 2 items the specialist needs from the practice, the patient instruction block, and the one follow-up question the practice must ask the specialist.

Estimated time-to-run: 12 minutes per referral

1*ChatGPT or Claude*

HOW TO INPUT

1. Open the prompt the day the referral is decided.
2. Paste the patient name, the specialist type (endo, perio, oral surgery), the clinical reason, and the relevant imaging.
3. Replace the placeholders.
4. Send the packet to the specialist same-day + hand a copy to the patient.

PROMPT

You are a dental provider building a specialist referral packet. Below is the referral. Generate the packet as four blocks: (1) a 3-bullet clinical summary (the tooth, the diagnosis, the reason for referral); (2) the 2 items the specialist needs from the practice (the most recent periapical + panorex images, the patient's medical history); (3) a patient instruction block -- the one thing the patient must do before the specialist visit (take medication, fast, arrange a driver) + the one thing to expect after; (4) the one follow-up question the practice must ask the specialist (treatment timing, sedation options, post-op care). Tone: plain English. Referral: [PASTE].

EXPECTED OUTPUT

A 4-block specialist referral packet with clinical summary, required items, patient instructions, and follow-up question.

Step time estimate: 12 minutes
