

The Dentrix Integration Playbook

Twenty AI workflows for dental offices running Dentrix — built for office managers, treatment coordinators, and dentists.

What's inside

Morning huddle, same-day fill, and schedule-recovery workflows from your real Dentrix reports

Treatment acceptance and continuing-care reactivation campaigns

Insurance, financial, and end-of-day reconciliation workflows

Patient Engage messaging, digital forms, and review workflows

A guide to evaluating Dentrix Marketplace integrations

12 months of free updates — every improvement ships to your inbox

WORKFLOW 01 OF 20

The Daily Huddle Brief — The 8-Minute Morning Meeting

A one-step prompt that turns your Dentrix Daily Huddle Report into a tight morning-huddle script: yesterday's production vs. goal, today's scheduled production, unscheduled treatment walking in the door, and balances to collect at checkout.

Estimated time-to-run: 10 minutes before the huddle

01 ChatGPT or Claude

HOW TO INPUT

Step 1: **Run the Daily Huddle Report** in the Dentrix Office Manager (Analysis > Practice Advisor > Daily Huddle Report), including the Scheduled Patients Summary and the "Patients who have Treatment Plans" section.

Step 2: **Copy the key numbers and replace the placeholders** — production yesterday, collections yesterday, scheduled production today, new patients, and any patients with unscheduled treatment.

Step 3: **Read the script at the huddle** and hand the follow-up list to the treatment coordinator.

PROMPT

You are a dental office manager running the morning huddle. Below are today's numbers from our Dentrix Daily Huddle Report. Write a one-page huddle script as four blocks: (1) Yesterday — production, collections, and whether we hit goal, in two sentences; (2) Today — scheduled production, number of patients, and any holes in the schedule; (3) Money in the building — patients on today's schedule who have unscheduled treatment (name + planned procedure + dollar amount) and who on the team will talk to each one; (4) Checkout watch — patients with outstanding balances coming in today (name + balance) and the exact line to use at checkout. Tone: plain English, no fluff, no motivational-poster language. Numbers: [PASTE HUDDLE REPORT NUMBERS]. Today's date: [DATE]. Goal for today: [DOLLAR GOAL].

EXPECTED OUTPUT

A one-page huddle script with yesterday's score, today's targets, unscheduled-treatment talk assignments, and checkout collection lines.

Step time estimate: 10 minutes

WORKFLOW 02 OF 20

Fill the Same-Day Hole — The ASAP + Hot List Sprint

A two-list prompt that turns your Dentrix ASAP List and Hot List into a prioritized call-and-text sprint, so a same-day cancellation becomes a filled chair within the hour instead of lost production.

Estimated time-to-run: 15 minutes per opening

02

ChatGPT or Claude, plus Dentrix Patient Engage two-way texting to send

HOW TO INPUT

Step 1: **Pull both lists.** Get your ASAP List from Dentrix and your Hot List (patients who requested appointments that weren't available) from the Appointment List. Note the open slot: date, time, provider, and what kind of appointment fits (hygiene, restorative, emergency).

Step 2: **Replace the placeholders.**

Step 3: **Work the list top-down** — text first, then call anyone who doesn't answer in 20 minutes.

PROMPT

You are a dental front-desk coordinator filling a same-day opening. Rank these patients for outreach and write the exact message for each. Rank by: (1) patients whose requested appointment type matches the opening, (2) patients with unscheduled treatment or overdue continuing care, (3) everyone else. For each patient write a text under 40 words: name them, name the specific opening (day + time + doctor), one reason it's good for them, and a single yes/no question. No exclamation points, no "just checking in" language. Opening: [DATE, TIME, PROVIDER, APPOINTMENT TYPE]. Patients: [PASTE ASAP + HOT LIST NAMES WITH NOTES].

EXPECTED OUTPUT

A ranked outreach list with a ready-to-send text per patient and the call order.

Step time estimate: 15 minutes per opening

WORKFLOW 03 OF 20

Unscheduled Treatment Rescue — Today's Talk List

A prompt that takes a Dentrix Treatment Manager search and turns it into a chair-side talk list: which patients already on today's schedule have treatment planned but not scheduled, what it is, and who talks to them.

Estimated time-to-run: 10 minutes each morning

03 ChatGPT or Claude

HOW TO INPUT

Step 1: Find today's opportunities. In Dentrix, open the Treatment Manager from the Patient Chart or Appointment Book and run a search for patients with unscheduled treatment who have appointments today or this week.

Step 2: Copy the patient names, planned procedures, and dollar amounts.

Step 3: Replace the placeholders.

Step 4: Hand the talk list to the hygienist and doctor before the first patient sits down.

PROMPT

You are a treatment coordinator preparing the day's case-acceptance talks. For each patient below, write a 3-line chair-side brief: line 1 – the patient's name and what they are here for today; line 2 – the unscheduled treatment, in plain words a patient understands (no ADA codes), with the dollar amount; line 3 – the single question to open the conversation, assigned to either the hygienist or the doctor. Order the list by dollar amount, highest first. Skip anyone whose treatment was already declined twice – note them separately as "rest, don't push." Patients: [PASTE TREATMENT MANAGER RESULTS]. Date: [DATE].

EXPECTED OUTPUT

A ranked chair-side talk list with plain-language treatment descriptions, dollar amounts, and assigned talkers.

Step time estimate: 10 minutes

WORKFLOW 04 OF 20

The 48-Hour Confirmation Blitz — No More Silent No-Shows

A prompt that takes your unconfirmed appointments from the Dentrix Appointment Book and writes the confirmation messages — escalating from friendly to firm — so the schedule firms up two days out instead of falling apart the morning of.

Estimated time-to-run: 15 minutes, twice a week

04 ChatGPT or Claude, plus Dentrix Patient Engage to send

HOW TO INPUT

Step 1: **Pull the unconfirmed appointments** from the Dentrix Appointment Book for the next two days.

Step 2: **Copy each patient's details and replace the placeholders** — name, appointment type, appointment time, and how many reminders they have already received.

Step 3: **Send the sequence** through Patient Engage two-way texting; call anyone still unconfirmed the morning before their appointment.

PROMPT

You are a dental front-desk lead confirming appointments. Write confirmation messages for each patient below in three escalating versions: (1) the standard confirm text — warm, under 30 words, with the appointment day, time, and a yes/no confirm ask; (2) the second nudge — for patients who got version 1 and didn't answer, slightly firmer, mentions the appointment will be released if unconfirmed; (3) the final call script — 4 spoken lines for a phone call, including what to say if it goes to voicemail. Never guilt-trip, never use all caps, never say "policy." Patients: [PASTE UNCONFIRMED LIST WITH APPOINTMENT DETAILS].

EXPECTED OUTPUT

Three escalating confirmation messages per patient plus a voicemail script.

Step time estimate: 15 minutes

WORKFLOW 05 OF 20

Case Acceptance Follow-Up — The Treatment Planner Call List

A prompt that turns Treatment Planner cases and Ledger balances into a follow-up call list with scripts — so presented treatment that went home "to think about it" gets a real second conversation.

Estimated time-to-run: 20 minutes per call block

05 ChatGPT or Claude

HOW TO INPUT

Step 1: **Pull presented-but-unscheduled cases** from the Treatment Planner, with each patient's Ledger balance and insurance estimate if available.

Step 2: **Copy the case age and first-conversation notes** from the Office Journal, and replace the placeholders.

Step 3: **Make the calls in one block**; log the outcome in the Office Journal the same day.

PROMPT

You are a dental treatment coordinator following up on presented treatment. For each patient below, write a call script with four parts: (1) the opener — reference the specific treatment and the date it was presented, warm and unhurried; (2) the check-in question — one open question about what's holding the decision up; (3) the money bridge — state their estimated out-of-pocket after insurance in plain dollars, then offer the two simplest payment options the office takes; (4) the close — one specific next step with a date, not "let me know." If the case is over 90 days old, add a one-line reactivation reason (benefits reset, condition worsens, etc.). Tone: helpful, never salesy, never mention "production." Patients: [PASTE TREATMENT PLANNER CASES WITH BALANCES AND DATES PRESENTED].

EXPECTED OUTPUT

A call script per patient with opener, check-in question, money bridge, and a dated next step.

Step time estimate: 20 minutes per call block

WORKFLOW 06 OF 20

Recall Reactivation Campaign — Wake Up the Continuing Care List

A prompt that turns your Dentrix Continuing Care List of overdue patients into a reactivation message series — segmented by how overdue they are — written for Campaign Studio or your Patient Engage messaging.

Estimated time-to-run: 30 minutes per campaign

06

ChatGPT or Claude, plus Dentrix Patient Engage Campaign Studio to send

HOW TO INPUT

Step 1: **Generate the Continuing Care List** for patients overdue for prophylaxis, periodontal, or recall exams (from the Appointment Book, or the interactive version from Letters & Custom Lists in the Office Manager).

Step 2: **Copy each patient's name, how overdue they are, and last visit date**; segment into bands (1–6 months, 6–12 months, 12+ months), and replace the placeholders.

Step 3: **Load one band at a time** into Campaign Studio so the front desk can handle the response.

PROMPT

You are a dental office manager writing a recall reactivation campaign. Write three messages, one per overdue band. Each message: under 60 words, names the patient's last visit month if known, gives one health reason to come back (not a scare tactic), names two specific open days in the next two weeks, and ends with a single scheduling question. Band 1 (1–6 months overdue): warm routine tone. Band 2 (6–12 months): slightly more direct, mention the doctor by name. Band 3 (12+ months): the "we miss you" tone, acknowledge it's been a while, offer the new-patient-style welcome-back. No discounts promised, no "just a reminder" phrasing. Open days: [DAY 1], [DAY 2]. Doctor: [DOCTOR NAME].

EXPECTED OUTPUT

Three segmented reactivation messages ready to load into Campaign Studio.

Step time estimate: 30 minutes per campaign

WORKFLOW 07 OF 20

Hygiene Reappointment Push — Fill Next Quarter's Hygiene Columns

A prompt that converts your overdue-hygiene Continuing Care names into a phone-call plan with talk tracks — the highest-ROI calls a front desk can make.

Estimated time-to-run: 20 minutes to prep, then call time

07 ChatGPT or Claude

HOW TO INPUT

Step 1: **Pull overdue hygiene patients** from the Dentrrix Continuing Care List (prophy or perio maintenance) with phone numbers.

Step 2: **Copy each patient's last hygiene date and usual hygienist** if one is assigned, and replace the placeholders.

Step 3: **Block 60–90 minutes of call time**; aim for 3 booked appointments per hour.

PROMPT

You are a dental front-desk coordinator calling overdue hygiene patients. Write a call plan with: (1) the opening talk track – 3 spoken lines that name the patient, note their last cleaning month, and offer two specific openings with their usual hygienist; (2) objection answers – one line each for "I need to check my schedule," "do I really need to come every 6 months," "how much will it cost," and "I'll call you back"; (3) the voicemail version – under 25 seconds spoken, names the office and the hygienist, gives one callback number, no clinical details; (4) the end-of-block tally sheet – columns for called, booked, voicemail, and declined, so the next caller picks up where you left off. Tone: friendly, efficient, never scolding about the gap. Hygienists: [NAMES]. Openings: [DATES/TIMES].

EXPECTED OUTPUT

A complete call plan: talk track, objection answers, voicemail script, and tally sheet.

Step time estimate: 20 minutes prep

WORKFLOW 08 OF 20

Insurance Verification Batch — Tomorrow's Patients, Verified Today

A prompt that turns tomorrow's Appointment Book export and each patient's Family File insurance details into a verification checklist and a script for what to do when coverage doesn't check out.

Estimated time-to-run: 20 minutes each afternoon

08 ChatGPT or Claude

HOW TO INPUT

Step 1: **Export tomorrow's schedule** from the Dentrix Appointment Book.

Step 2: **Copy the insurance details from the Family File** for each patient — carrier, group/plan number, and remaining benefits if known — and replace the placeholders.

Step 3: **Run the verifications this afternoon**; flag any patient whose coverage fails verification for a call tonight or first thing in the morning.

PROMPT

You are a dental insurance coordinator doing day-before verification. Build a verification checklist table with one row per patient: patient name, appointment type, insurance carrier and plan, what to verify (eligibility, remaining annual max, deductible met, waiting periods, frequency limits on the planned procedure), and a status column. Then write a decision tree: if coverage verifies – what to note on the account; if coverage fails – the exact script for calling the patient tonight (3 lines: what happened, what it means in dollars, the two options); if the patient has no insurance on file – the script for offering the office's payment options at check-in tomorrow. No insurance jargon in patient-facing lines. Patients: [PASTE TOMORROW'S SCHEDULE WITH FAMILY FILE INSURANCE DETAILS].

EXPECTED OUTPUT

A verification checklist table plus decision-tree scripts for verified, failed, and uninsured patients.

Step time estimate: 20 minutes

WORKFLOW 09 OF 20

End-of-Day Reconciliation — The Day Sheet Close-Out

A prompt that turns the Dentrix Day Sheet into a clean end-of-day reconciliation summary: what was produced, what was collected, what doesn't match, and what carries to tomorrow.

Estimated time-to-run: 15 minutes at close

09 ChatGPT or Claude

HOW TO INPUT

Step 1: **Run the Day Sheet** for today — charges, payments, adjustments, and unearned revenue, broken out by provider.

Step 2: **Copy same-day adjustments, refunds, or payment-plan entries** from the Ledger, and replace the placeholders.

Step 3: **File the summary with the deposit**; hand any open items to the morning huddle.

PROMPT

You are a dental office manager closing out the day. Using today's Dentrix Day Sheet numbers, write an end-of-day summary with five sections: (1) Production — total charges by provider vs. daily goal; (2) Collections — payments received by type (insurance, patient, card, cash) vs. collection target; (3) Adjustments — every adjustment over \$100 with a one-line reason; (4) Doesn't match — any figure that doesn't reconcile, with the most likely cause and who owns fixing it; (5) Carries to tomorrow — unsent claims, unposted payments, and anything the morning huddle needs to know. End with a single go/no-go line: does the deposit match the Day Sheet, yes or no. Numbers: [PASTE DAY SHEET TOTALS AND NOTABLE TRANSACTIONS].

EXPECTED OUTPUT

A five-section reconciliation summary with a deposit match verdict.

Step time estimate: 15 minutes

WORKFLOW 10 OF 20

Referral Thank-You Engine — The Referral Recap Turnaround

A prompt that takes the Dentrix Referral Recap Report and writes personal thank-you notes to referring providers and patients — the cheapest marketing a practice has.

Estimated time-to-run: 20 minutes per week

10 ChatGPT or Claude

HOW TO INPUT

Step 1: **Run the Referral Recap Report** for the past week or month.

Step 2: **Copy who referred whom and what treatment the referred patient received**, and replace the placeholders.

Step 3: **Send within 7 days** of the referred patient's visit — late thank-yous are nearly worthless.

PROMPT

You are a dentist writing referral thank-yous. For each referral below, write two notes: (1) to the referring provider – 4 sentences: thank them by name, name the patient (first name only) and the treatment completed, one line on the outcome, and a line inviting future referrals of that type; professional tone, no flattery; (2) to the referring patient – 3 sentences: thank them for trusting the practice with their friend/family member by first name, one warm line about the visit, no clinical details, no request for more referrals (the goodwill does the work). Referrals: [PASTE REFERRAL RECAP ENTRIES].

EXPECTED OUTPUT

Paired thank-you notes (provider + patient) for every referral in the report.

Step time estimate: 20 minutes per week

WORKFLOW 11 OF 20

Review Request Engine — Turn Good Visits Into Google Reviews

A prompt that builds a post-appointment review request sequence using Dentrix Patient Engage's automated surveys and review requests — timed so the ask lands while the visit is still fresh.

Estimated time-to-run: 25 minutes to set up

11 ChatGPT or Claude, plus Dentrix Patient Engage review management to send

HOW TO INPUT

- Step 1: **Pick your trigger appointment types** (start with hygiene and completed restorative).
- Step 2: **Copy your Google review link and office name** exactly as it appears on Google, and replace the placeholders.
- Step 3: **Set the sequence live in Patient Engage**; check response rates monthly and adjust the timing.

PROMPT

You are a dental office manager setting up automated review requests. Write a three-touch post-appointment sequence: (1) the satisfaction survey text — sent 2 hours after the appointment, 3 questions max, under 40 words, asks about the visit in plain language; (2) the review request — sent the next morning ONLY to patients who answered the survey positively, names the office, gives the single review link, under 30 words, one ask; (3) the internal alert script — for patients who answered the survey negatively, write the exact internal note the front desk gets (patient name, what to do within 24 hours, who owns it) so a bad experience gets a call before it becomes a public review. Rules: never offer anything in exchange for a review, never ask twice, never send to emergency or extraction patients. Office: [OFFICE NAME]. Review link: [LINK].

EXPECTED OUTPUT

A three-touch review sequence plus an internal negative-feedback response protocol.

Step time estimate: 25 minutes

WORKFLOW 12 OF 20

New-Patient Intake Tune-Up — Forms Done Before They Arrive

A prompt that redesigns your new-patient intake around Dentrix Patient Engage digital forms and the Patient Portal — so new patients arrive with forms, ID, and insurance already in the system.

Estimated time-to-run: 30 minutes to set up

12

ChatGPT or Claude, plus Dentrix Patient Engage online forms and Patient Portal

HOW TO INPUT

Step 1: **List the forms new patients fill out on paper** (health history, consent, financial policy, HIPAA).

Step 2: **Copy where your New Patient Journey and Patient Portal links live today** (website, confirmation texts), and replace the placeholders.

Step 3: **Publish the new flow**; have the front desk confirm form completion on the 48-hour confirmation call.

PROMPT

You are a dental office manager rebuilding new-patient intake. Write the complete intake flow as: (1) the text message sent at booking – under 35 words, includes the New Patient Journey link, tells them it takes 10 minutes and saves 20 at the office, one ask; (2) the form checklist – which forms go digital in what order, which ones require an e-signature, and which stay in-office (note: keep it to the minimum legal set); (3) the confirmation-call script addition – 3 lines the front desk adds to the 48-hour call when forms aren't done yet; (4) the arrival script – 2 lines for when a patient arrives with everything complete vs. with nothing complete, so the front desk never fumbles either way. Tone: welcoming, efficient, zero lecturing about paperwork. Forms: [LIST CURRENT PAPER FORMS]. Portal links: [WHERE THEY LIVE].

EXPECTED OUTPUT

A complete digital intake flow: booking text, form checklist, confirmation-call add-on, and arrival scripts.

Step time estimate: 30 minutes

WORKFLOW 13 OF 20

Missed-Appointment Recovery — Win Back the No-Show

A prompt that turns your missed-appointment list into a recovery sequence — email first, then call — using Patient Engage's missed-appointment reminder with a request-appointment link.

Estimated time-to-run: 15 minutes per batch

13 ChatGPT or Claude, plus Dentrix Patient Engage to send

HOW TO INPUT

Step 1: **Pull this week's missed appointments and cancellations** without a reschedule from the Appointment Book.

Step 2: **Copy each patient's appointment type and whether it's a first or repeat miss**, and replace the placeholders.

Step 3: **Send the email the same day**; call repeat misses personally within 48 hours.

PROMPT

You are a dental front-desk coordinator recovering missed appointments. For each patient below, write: (1) the same-day email — under 50 words, acknowledges the missed visit without guilt, includes the request-appointment link so they can rebook on their own time, one question; (2) the 48-hour call script for repeat misses — 4 spoken lines, names the missed appointment type, asks directly whether they want to reschedule or release the spot, handles "I've been busy" with one empathetic line and one specific opening; (3) the Office Journal note template — one line per patient capturing the outcome (rebooked date, declined, no answer) so the next person knows the story. Never charge or threaten about missed appointments in writing. Patients: [PASTE MISSED APPOINTMENT LIST].

EXPECTED OUTPUT

A same-day email, a call script for repeat misses, and an Office Journal note template.

Step time estimate: 15 minutes per batch

WORKFLOW 14 OF 20

Perfect-Day Block Audit — Stop Leaking Prime Time

A prompt that audits your Dentrix Perfect Day Scheduling blocks: which blocks earn their keep, which should be released, and when the ASAP List should backfill them.

Estimated time-to-run: 30 minutes per quarter

14 ChatGPT or Claude

HOW TO INPUT

Step 1: **List your current Perfect Day Scheduling blocks** in the Appointment Book: block name (new patient, emergency, hygiene, crown/bridge), days/times, and how often each went unfilled last month.

Step 2: **Copy your ASAP List depth** — roughly how many patients are waiting for short-notice openings — and replace the placeholders.

Step 3: **Adjust the blocks and brief the team** on the new backfill rules.

PROMPT

You are a dental office manager auditing schedule blocks. For each block below, give a keep / shrink / release verdict with one reason, based on its fill rate and the revenue it protects. Then write the block rules as a one-page team memo: which blocks stay open until 48 hours before and get filled from the ASAP List, which blocks release automatically and when, who is responsible for backfilling each block type, and what happens when a block goes unfilled two weeks in a row. End with the single metric the office tracks monthly to know the blocks are working (suggested: prime-time utilization rate). Tone: direct, no committee language. Blocks: [LIST BLOCKS WITH FILL RATES]. ASAP List depth: [NUMBER WAITING].

EXPECTED OUTPUT

A keep/shrink/release verdict per block plus a one-page team memo with backfill rules.

Step time estimate: 30 minutes

WORKFLOW 15 OF 20

Chair-Side Treatment Talk — From Treatment Planner to Plain English

A prompt that converts Treatment Planner line items into chair-side explanations patients actually understand — no ADA codes, no clinical jargon, just what it is, why now, and what it costs.

Estimated time-to-run: 10 minutes per case

15 ChatGPT or Claude

HOW TO INPUT

Step 1: **Pick a high-hesitation treatment plan** from the Dentrix Treatment Planner (crowns, SRP, implants are the usual suspects).

Step 2: **Copy the planned procedures and the patient's estimated out-of-pocket**, and replace the placeholders.

Step 3: **Rehearse the script once out loud** before using it chair-side — if you stumble, simplify further.

PROMPT

You are a dentist explaining treatment to a patient chair-side. Turn the treatment plan below into a 90-second spoken explanation with four parts: (1) what it is — describe the procedure the way you'd describe it to a smart friend with no dental knowledge, no ADA codes, no Latin; (2) why now — one honest clinical reason tied to what you saw today, no scare tactics; (3) what happens if we wait — one factual consequence, stated calmly; (4) what it costs — the patient's estimated out-of-pocket in plain dollars, then the monthly equivalent if the office offers payment plans. End with one question that invites the patient to decide, not a pressure close. Total under 200 spoken words. Treatment plan: [PASTE TREATMENT PLANNER ITEMS WITH OUT-OF-POCKET ESTIMATE].

EXPECTED OUTPUT

A 90-second chair-side script: what, why now, cost of waiting, cost in dollars, and a decision question.

Step time estimate: 10 minutes per case

WORKFLOW 16 OF 20

Financial Arrangement Conversations — The Ledger Money Talk

A prompt that turns Ledger balances and payment-agreement options into calm, clear financial conversations — presented before treatment, not sprung at checkout.

Estimated time-to-run: 15 minutes per arrangement

16 ChatGPT or Claude

HOW TO INPUT

Step 1: **Pull the patient's Ledger** — current balance, treatment estimate, insurance estimate, and any existing payment agreement.

Step 2: **Copy which payment options the office actually offers** (in-house plan, third-party financing, card on file), and replace the placeholders.

Step 3: **Have the money conversation at the treatment-plan presentation** — never for the first time at checkout.

PROMPT

You are a dental financial coordinator presenting payment options. Write the money conversation for the patient below in three parts: (1) the total — state the treatment cost, the insurance estimate, and the patient's estimated share in three short sentences, no rushing; (2) the options — present the office's real payment options as a simple comparison (pay in full, in-house plan with terms, third-party financing with terms), each in one line with the monthly amount; (3) the ask — one question that lets the patient choose, plus the exact line for when they say "that's more than I expected" (acknowledge, restate the monthly figure, offer to start with the most urgent phase). Rules: never apologize for the fee, never say "unfortunately," never present more than three options. Patient: [PASTE LEDGER SUMMARY AND AVAILABLE PAYMENT OPTIONS].

EXPECTED OUTPUT

A three-part money conversation: the total, the options comparison, and the ask with an objection line.

Step time estimate: 15 minutes

WORKFLOW 17 OF 20

Lab Case Chase — Nothing Sits in the Lab Queue

A prompt that turns the Dentrix Lab Case Manager pending list into a weekly chase routine — so crowns, dentures, and appliances never stall waiting on a lab or a patient.

Estimated time-to-run: 15 minutes per week

17 ChatGPT or Claude

HOW TO INPUT

Step 1: **Open the Lab Case Manager** in Dentrix and export the pending cases: patient, case type, lab, date sent, expected return, and whether a seat appointment is booked.

Step 2: **Flag anything past its expected return date or with no seat appointment booked**, and replace the placeholders.

Step 3: **Run the chase the same day every week**; hand overdue items to the office manager.

PROMPT

You are a dental office manager running the weekly lab-case chase. For each pending case below, write one action line: who does what by when. Sort into three groups: (1) overdue from the lab – the exact call script for the lab (2 lines: case name, date sent, what you need); (2) case back but no seat appointment – the patient outreach text (under 30 words, names the restoration, offers two seat times); (3) on track – no action, just the return date to watch. End with the one standing rule that prevents future stalls (suggested: no case leaves for the lab without a seat appointment already booked). Cases: [PASTE LAB CASE MANAGER PENDING LIST].

EXPECTED OUTPUT

A sorted action list with lab call scripts, patient seat texts, and one standing prevention rule.

Step time estimate: 15 minutes per week

WORKFLOW 18 OF 20

Custom List Campaigns — Letters & Custom Lists That Actually Mail

A prompt that turns a Dentrix Letters & Custom Lists query into a targeted mailing or email campaign — birthday cards for kids, implant mailers for partial-denture patients, whitening offers for wedding season.

Estimated time-to-run: 30 minutes per campaign

18**ChatGPT or Claude, plus Dentrix Patient Engage Campaign Studio or your mail house**

HOW TO INPUT

Step 1: **Build the custom list** in the Dentrix Office Manager (Letters & Custom Lists) — e.g., patients 55+ with partial dentures and no implant consult, or patients with whitening noted in the chart.

Step 2: **Export the count and a few sample records** — first name and relevant detail only, no full PHI in the prompt — and replace the placeholders.

Step 3: **Send the campaign**, then track response with a campaign code on the schedule.

PROMPT

You are a dental office manager writing a targeted patient campaign. Write the campaign for the audience below: (1) the list definition in plain words – who qualifies and why this offer fits them; (2) the message – under 80 words for email or a 4x6 postcard, names the specific treatment, gives one patient-relevant benefit, includes one clear call to action with the office phone number, no before-and-after claims, no "limited time" pressure unless it's genuinely true; (3) the front-desk briefing – 5 lines so the team knows the campaign is running, what patients will ask about, and the answers. Keep all patient data out of the prompt – use counts and first names only. Audience: [DESCRIBE CUSTOM LIST, COUNT, SAMPLE FIRST NAMES].

EXPECTED OUTPUT

A list definition, campaign message, and front-desk briefing.

Step time estimate: 30 minutes per campaign

WORKFLOW 19 OF 20

Office Journal Follow-Up Tracker — Nothing Falls Through

A prompt that turns a week's worth of Dentrix Office Journal entries into a clean follow-up task list with owners and deadlines.

Estimated time-to-run: 15 minutes per week

19 ChatGPT or Claude**HOW TO INPUT**

Step 1: **Export or copy the week's Office Journal entries** — follow-ups promised, calls to return, pending authorizations, patient requests.

Step 2: **Strip each entry to the essentials** — who, what was promised, to whom, by when — and replace the placeholders.

Step 3: **Review the task list at the Monday huddle**; anything not done gets a new owner, not an excuse.

PROMPT

You are a dental office manager turning journal notes into action. Convert the Office Journal entries below into a task table with four columns: Task | Owner | Deadline | Done?. Apply these rules: every task gets exactly one owner; every deadline is a specific date, never "ASAP" or "soon"; anything already past due goes to the top under "OVERDUE" with a new deadline of tomorrow; anything vague ("call back about the thing") gets flagged as "NEEDS CLARITY — ask [name] what this means" instead of being guessed at. End with the count of open vs. closed items from last week's list, if provided. Entries: [PASTE OFFICE JOURNAL ENTRIES].

EXPECTED OUTPUT

A task table with single owners and dated deadlines, overdue items surfaced first.

Step time estimate: 15 minutes per week

WORKFLOW 20 OF 20

Marketplace Integration Picks — Choose Your Next Dentrix Add-On

A prompt that evaluates Dentrix Marketplace and API Exchange integrations for your office — so you pick add-ons that solve real problems instead of collecting subscriptions.

Estimated time-to-run: 45 minutes per evaluation round

20 ChatGPT or Claude

HOW TO INPUT

Step 1: **List the office's top three pain points** (missed calls after hours, no-show rate, slow insurance verification, weak reviews, documentation time).

Step 2: **Browse the Dentrix Marketplace** (dentrix.com/marketplace) and the Dentrix Ascend API Exchange listings; confirm which listings support your Dentrix version (desktop Dentrix vs. Dentrix Ascend), and replace the placeholders.

Step 3: **Score two finalists with a 30-day trial** before committing — never buy on the demo alone.

PROMPT

You are a dental office manager evaluating software integrations. For each candidate integration below, write a one-page evaluation: (1) the problem it claims to solve, in your office's words; (2) fit check — does it integrate with YOUR Dentrix version (desktop Dentrix via the Developer Program/Marketplace, or Dentrix Ascend via the API Exchange), and is the integration read-only or does it write back to the schedule/chart; (3) the 3 questions to ask on the demo call (suggested: what happens to my data if I cancel, who supports it when it breaks — Henry Schein One or the vendor, what does it cost per location per month all-in); (4) the 30-day trial success metric — one number that decides keep vs. cancel (examples: no-show rate, after-hours calls answered, reviews per month). Then rank the candidates and name the single winner with one reason. Known integration categories to consider: AI documentation (e.g., Bola AI, VideaHealth, DentScribe), patient communication (e.g., Weave), analytics and engagement (e.g., Dental Intelligence). Pain points: [LIST TOP 3]. Candidates: [LIST INTEGRATIONS UNDER CONSIDERATION].

EXPECTED OUTPUT

A one-page evaluation per candidate, a ranked shortlist, and a single winner with a trial success metric.

Step time estimate: 45 minutes
