

The Housecall Pro Integration Playbook

Twenty AI workflows for home-service businesses running Housecall Pro — built for owners, office staff, dispatchers, and techs.

What's inside

Morning dispatch, same-day fill, and day-before confirmation workflows from your real schedule

Estimate follow-ups, on-site upsells, and membership pitches from your price book

Automated review requests, thank-you postcards, and win-back campaigns from the Marketing Center

Tech scorecards, KPI dashboards, and pipeline reviews built on your real numbers

A guide to evaluating Housecall Pro integrations and add-ons

12 months of free updates — every improvement ships to your inbox

WORKFLOW 01 OF 20

The Morning Dispatch Huddle — Board Set in 20 Minutes

A one-step prompt that turns your Housecall Pro schedule into a tight dispatch huddle script: yesterday's completions vs. goal, today's jobs and tech assignments, arrival windows to protect, and jobs at risk of running long.

Estimated time-to-run: 20 minutes before the first truck rolls

01 ChatGPT or Claude

HOW TO INPUT

Step 1: **Pull today's schedule.** Open your Housecall Pro calendar — jobs, tech assignments, and arrival windows — plus any notes on jobs flagged at risk yesterday.

Step 2: **Copy the key facts and replace the placeholders** — job count, tech count, arrival windows, any jobs that ran long yesterday, and known trouble spots (gated communities, parts on order).

Step 3: **Read the script at the huddle** and hand the risk list to the dispatcher.

PROMPT

You are a dispatcher running the morning huddle for a home-service company. Below is today's schedule from Housecall Pro. Write a one-page huddle script as four blocks: (1) Yesterday — jobs completed, revenue collected, and whether we hit goal, in two sentences; (2) Today — job count, techs on the board, and arrival windows that must be protected; (3) Risk watch — jobs likely to run long and what to do about each (call ahead, send a second tech, reschedule the tail); (4) Customer comms — which customers get a confirmation text this morning and the exact wording. Tone: plain English, no fluff, no motivational-poster language. Use first names only — no full customer addresses in this prompt. Schedule: [PASTE TODAY'S JOBS, TECHS, ARRIVAL WINDOWS]. Yesterday's numbers: [COMPLETIONS, REVENUE]. Today's date: [DATE]. Goal for today: [DOLLAR GOAL].

EXPECTED OUTPUT

A one-page dispatch script with yesterday's score, today's board, risk assignments, and confirmation texts.

Step time estimate: 20 minutes

WORKFLOW 02 OF 20

Speed to Lead — The New Request Triage

A prompt that turns your overnight online-booking requests and AI-answered calls into a ranked morning callback list — so the 7 AM web booking gets a tech assigned before the competitor calls back.

Estimated time-to-run: 10 minutes each morning

02

ChatGPT or Claude

HOW TO INPUT

Step 1: **Pull the overnight intake.** Check Housecall Pro online booking requests and any after-hours call summaries — new leads, requested services, and promised callback times.

Step 2: **Copy each lead's details and replace the placeholders** — service requested, urgency signals (no heat, water leak, sparking outlet), and preferred contact method. First names and service details only — no full addresses in the prompt.

Step 3: **Work the list top-down** — book the emergencies first, then the revenue, then the tire-kickers.

PROMPT

You are an office manager triaging new service requests for a home-service company using Housecall Pro. Rank these leads for morning outreach. Rank by: (1) safety/urgency (no heat, water damage, electrical hazard), (2) estimated job value, (3) how close they are to booking (requested a specific time vs. "just getting a quote"). For each lead write: the priority rank, the callback script (3 lines: acknowledge the problem, state the next available window, one yes/no booking question), and the suggested tech assignment. No exclamation points, no "just checking in" language. Leads: [PASTE OVERNIGHT BOOKINGS AND CALL SUMMARIES, FIRST NAMES ONLY]. Today's open windows: [LIST].

EXPECTED OUTPUT

A ranked callback list with a booking script and tech assignment per lead.

Step time estimate: 10 minutes

**WORKFLOW 03 OF 20**

The On-My-Way Discipline — No More "Where's My Tech?"

A prompt that audits your last two weeks of "on my way" texts and arrival-window misses, then writes the fix: which techs to coach, which windows to widen, and the exact message to send when a tech is running late.

Estimated time-to-run: 20 minutes, once a week

03**ChatGPT or Claude, plus Housecall Pro's automated "on my way" texts with GPS tracking****HOW TO INPUT**

Step 1: **Pull the arrival data.** From your Housecall Pro schedule and job history, list last week's jobs: promised arrival window vs. actual arrival, and whether the "on my way" text went out.

Step 2: **Copy the misses and replace the placeholders** — late arrivals, missed windows, and any customer complaints about timing.

Step 3: **Coach the pattern, not the person** — share the week's scorecard with the team.

PROMPT

You are an operations manager fixing arrival-window performance. Below is two weeks of arrival data from Housecall Pro. Write: (1) the scorecard – on-time percentage by tech, average minutes late, and the worst three misses; (2) the pattern – is it one tech, one job type, or windows set too tight; (3) the fix – specific window changes and one coaching line per tech who needs it, firm but fair; (4) the late script – the exact text to send a customer when a tech will miss the window (apologize once, give the new ETA, offer one make-good option). No blame language about individual techs in anything the customer sees. Data: [PASTE ARRIVAL WINDOWS VS. ACTUALS BY TECH].

EXPECTED OUTPUT

A weekly arrival scorecard, the root pattern, coaching lines, and a customer-facing late text.

Step time estimate: 20 minutes

**WORKFLOW 04 OF 20**

The Estimate Follow-Up Sprint — Rescue the Unsold Estimate

A two-touch prompt that turns your unsold estimates into a follow-up sequence — the automated Housecall Pro follow-up plus a personal nudge — so a "let me think about it" becomes a booked job instead of a dead lead.

Estimated time-to-run: 15 minutes per batch

04**ChatGPT or Claude, plus Housecall Pro automated estimate follow-ups****HOW TO INPUT**

Step 1: **Pull the unsold estimates.** List estimates sent but not approved in the last 14 days — customer, job type, dollar amount, and days since sent.

Step 2: **Copy each estimate's details and replace the placeholders.** First names only — no full addresses or financial details in the prompt.

Step 3: **Send the sequence** — automated follow-up first, personal touch second, then move on.

PROMPT

You are a sales coordinator following up on unsent-decision estimates for a home-service company using Housecall Pro. For each estimate below, write a two-touch sequence: touch 1 — a text under 40 words referencing the specific job and one reason to decide now (schedule filling, seasonal deadline, expiring price), ending with a yes/no question; touch 2 (3 days later, only if no reply) — a short call script, 4 spoken lines, that re-opens with the customer's own words about the problem and offers the next available install window. Never discount in the message — offer scheduling priority instead. Never guilt-trip. Estimates: [PASTE ESTIMATE LIST: FIRST NAME, JOB TYPE, AMOUNT, DAYS SINCE SENT].

EXPECTED OUTPUT

A two-touch follow-up sequence per estimate with texts and call scripts.

Step time estimate: 15 minutes per batch

**WORKFLOW 05 OF 20**

The Same-Day Fill — Turn a Cancellation Into Revenue

A prompt that turns a same-day cancellation into a fill sprint: rank your waitlist and past-due customers, write the texts, and get the truck back to billable within the hour.

Estimated time-to-run: 15 minutes per opening

05**ChatGPT or Claude, plus Housecall Pro text campaigns to send****HOW TO INPUT**

Step 1: **Note the opening.** When a job cancels, record the slot: date, time, tech, service area, and what job type fits.

Step 2: **Pull your fill list** — customers with tagged service-due reminders, recent estimates not yet booked, and anyone who asked for "sooner if something opens."

Step 3: **Work the list top-down** — text first, call anyone who doesn't answer in 20 minutes.

PROMPT

You are a dispatcher filling a same-day opening for a home-service company using Housecall Pro. Rank these customers for outreach. Rank by: (1) customers whose needed service matches the opening, (2) customers with overdue service or unbooked estimates, (3) everyone else. For each customer write a text under 40 words: first name, the specific opening (day + time + tech), one reason it's good for them, and a single yes/no question. No exclamation points, no "just checking in" language. Use first names only. Opening: [DATE, TIME, TECH, JOB TYPE, SERVICE AREA]. Customers: [PASTE FILL LIST WITH NOTES].

EXPECTED OUTPUT

A ranked fill list with a ready-to-send text per customer and the call order.

Step time estimate: 15 minutes per opening

**WORKFLOW 06 OF 20**

The Day-Before Lock-In — Confirmations That Stick

A prompt that takes tomorrow's schedule and writes the confirmation sequence — automated reminder plus a personal touch for the high-value jobs — so tomorrow's board firms up tonight instead of falling apart at 8 AM.

Estimated time-to-run: 10 minutes each afternoon

06**ChatGPT or Claude, plus Housecall Pro automated text and email reminders****HOW TO INPUT**

Step 1: **Pull tomorrow's jobs** from the Housecall Pro calendar — customer, job type, arrival window, and whether they've confirmed.

Step 2: **Flag the high-value jobs** (big tickets, first-time customers, jobs that already rescheduled once) for a personal touch on top of the automated reminder.

Step 3: **Send the sequence** this afternoon; call anyone still unconfirmed by 7 PM.

PROMPT

You are an office coordinator locking in tomorrow's schedule for a home-service company using Housecall Pro. For each job below, write: (1) the automated reminder text — warm, under 30 words, with the arrival window and a yes/no confirm ask; (2) for flagged high-value jobs only, a personal add-on line the office sends separately (reference the specific job, show a human is watching it). Escalation rule: if a customer doesn't confirm by 7 PM, write the call script — 3 spoken lines plus what to say if it goes to voicemail. Never say "policy." First names only. Jobs: [PASTE TOMORROW'S SCHEDULE WITH CONFIRMATION STATUS, FLAGGED HIGH-VALUE JOBS MARKED].

EXPECTED OUTPUT

Reminder texts for every job, personal add-ons for flagged jobs, and an evening call script.

Step time estimate: 10 minutes

WORKFLOW 07 OF 20

The Tech Debrief — Turn Field Notes Into Customer Updates

A prompt that turns your techs' mobile-app notes and job photos into polished customer updates — before/after summaries, what was found, what was done — so the customer feels informed instead of guessing.

Estimated time-to-run: 5 minutes per job

07**ChatGPT or Claude, plus the Housecall Pro mobile app (job notes and photos)**

HOW TO INPUT

Step 1: **Collect the field notes.** At job completion, have the tech's Housecall Pro mobile-app notes and photos ready — what was found, what was done, parts used.

Step 2: **Copy the notes and replace the placeholders.** First names only — no full addresses in the prompt.

Step 3: **Send the update** with the invoice — the customer reads what happened before they see the total.

PROMPT

You are a customer-experience lead writing post-job updates for a home-service company using Housecall Pro. Turn the tech's rough field notes into a customer-facing update with three parts: (1) what we found — plain words, no jargon, one or two sentences; (2) what we did — the work completed and parts installed, in the order done; (3) what's next — maintenance tip, warranty note, or recommended follow-up with a timeframe. Tone: confident, plain, neighborly — never condescending. Keep it under 120 words. Field notes: [PASTE TECH NOTES AND PHOTO DESCRIPTIONS, FIRST NAME ONLY]. Job type: [TYPE].

EXPECTED OUTPUT

A polished under-120-word customer update per job, ready to send with the invoice.

Step time estimate: 5 minutes per job

**WORKFLOW 08 OF 20**

The On-Site Upsell — Quote More Work Before the Truck Leaves

A prompt that turns "while you're here" moments into professional add-on quotes — using your Housecall Pro price book with AI pricing benchmarks — so the tech offers the extra work with confidence instead of winging it.

Estimated time-to-run: 10 minutes to prepare per tech, reusable

08**ChatGPT or Claude, plus the Housecall Pro price book****HOW TO INPUT**

Step 1: **List your top five add-on opportunities** per trade (e.g., HVAC: surge protector, drain pan switch, maintenance plan; plumbing: shut-off valve replacement, water heater flush).

Step 2: **Confirm the price-book line items** and note the AI pricing benchmark guidance — are you priced at, above, or below market on each?

Step 3: **Give each tech the one-pager** — the pitch, the price, the close.

PROMPT

You are a sales trainer writing on-site upsell one-pagers for home-service techs using Housecall Pro. For each add-on below, write: (1) the discovery line — the one question the tech asks that surfaces the need ("When did you last have the water heater flushed?"); (2) the 3-line pitch — what it does, why it matters now, the price from the price book; (3) the soft close — one yes/no question, no pressure. Rules: the tech never discounts on the spot; if the customer hesitates, the tech offers to add it to the estimate for them to decide at home. Plain language a homeowner understands. Add-ons: [LIST 5 ADD-ONS WITH PRICE-BOOK PRICES].

EXPECTED OUTPUT

A one-page upsell sheet per add-on: discovery line, pitch, and soft close.

Step time estimate: 10 minutes to prepare per tech

**WORKFLOW 09 OF 20**

The Membership Pitch — Recurring Revenue Sold From the Driveway

A prompt that builds the membership-plan pitch your techs deliver at the door — plans attached right on the Housecall Pro job or estimate — turning one-time jobs into recurring revenue.

Estimated time-to-run: 30 minutes to build, reusable all year

09**ChatGPT or Claude, plus Housecall Pro membership plans on jobs and estimates****HOW TO INPUT**

Step 1: **Define your plans.** List what each membership tier includes (visits per year, discount on repairs, priority scheduling) and the price.

Step 2: **Note how plans attach in Housecall Pro** — on the job or the estimate — so the tech's pitch matches the actual checkout flow.

Step 3: **Role-play the pitch once** with each tech before they take it live.

PROMPT

You are a membership sales coach for a home-service company using Housecall Pro. Write the driveway pitch for our maintenance membership: (1) the opener – 2 spoken lines the tech says after finishing the job, tying the plan to what they just saw ("Your system is running fine now, but those coils are going to need attention"); (2) the value stack – the three plan benefits in the customer's words (never say "recurring revenue"); (3) the price close – state the monthly or annual price plainly, then one yes/no question; (4) the objection answers – one line each for "I need to think about it," "too expensive," and "I'll just call when I need you." The tech attaches the plan on the Housecall Pro job or estimate before leaving. Plans: [DESCRIBE TIERS, INCLUSIONS, PRICES].

EXPECTED OUTPUT

A complete membership pitch script with opener, value stack, close, and objection answers.

Step time estimate: 30 minutes to build

WORKFLOW 10 OF 20

The Review Engine — 5 Stars on Autopilot

A prompt that audits your Housecall Pro Reviews setup and writes the escalation path — automatic request, personal nudge for the happy-but-silent, and the private recovery script for the unhappy — so every job feeds your Google and Facebook reputation.

Estimated time-to-run: 20 minutes to set up, then automatic

10

ChatGPT or Claude, plus Housecall Pro Reviews (automatic text/email requests, Reviews Dashboard)

HOW TO INPUT

Step 1: **Check your Reviews setup.** Confirm automatic review requests go out by text and email after each job, and note your Reviews Dashboard baseline (average rating, reviews per month).

Step 2: **Tag the exceptions** — use customer tags to exclude anyone who should never get a review request.

Step 3: **Write the escalation** — happy customers get the nudge, unhappy ones get the private recovery first.

PROMPT

You are a reputation manager for a home-service company using Housecall Pro Reviews. Write the three-part review system: (1) the automatic request — confirm the timing (right after job completion) and write the text version, under 30 words, warm and specific to the job done; (2) the personal nudge — for customers who were clearly happy on-site but didn't review, a 2-line follow-up text sent 3 days later; (3) the recovery script — for any 3-star-or-below signal, the private message the owner sends within 24 hours (acknowledge, take responsibility for the specific issue, offer the specific fix, ask for a second chance — never offer payment for review removal). Rules: never ask for "5 stars" explicitly; never route unhappy customers to Google. Baseline: [CURRENT RATING, REVIEWS PER MONTH].

EXPECTED OUTPUT

The automatic request text, the personal nudge, and the private recovery script.

Step time estimate: 20 minutes to set up

**WORKFLOW 11 OF 20**

The Collections Ladder — Get Paid Without the Awkward Call

A prompt that turns your aging invoices into an escalating collection sequence — text invoice, payment link, then the firm-but-fair call — built on Housecall Pro's online payments and invoicing.

Estimated time-to-run: 20 minutes per week

11 ChatGPT or Claude, plus Housecall Pro payments (online payment links, text invoices)

HOW TO INPUT

Step 1: **Pull the aging invoices.** List unpaid invoices by age band: 1–15 days, 16–30 days, 31–60 days, 60+ days — customer first name, amount, and what the job was.

Step 2: **Copy each band and replace the placeholders.** First names and amounts only — no card numbers or bank details anywhere in this prompt, ever.

Step 3: **Work the ladder weekly** — each band gets its step, then moves up if unpaid.

PROMPT

You are an accounts-receivable lead collecting overdue invoices for a home-service company using Housecall Pro. For each age band, write the collection step: 1–15 days – a friendly text with the payment link, under 30 words, assumes they forgot; 16–30 days – a firmer email naming the invoice number, amount, and due date, offering the payment link again; 31–60 days – a call script, 4 spoken lines, that asks what's holding up payment and offers a split-payment option; 60+ days – the final notice email stating the account will be referred for collections, with the exact balance and a 7-day deadline. Tone escalates but never threatens, never shames. Every message includes the Housecall Pro payment link. Invoices: [PASTE AGING LIST BY BAND: FIRST NAME, AMOUNT, JOB TYPE, DAYS OVERDUE].

EXPECTED OUTPUT

A four-rung collection ladder with ready-to-send messages per age band.

Step time estimate: 20 minutes per week

**WORKFLOW 12 OF 20**

The Thank-You Postcard — Stay on the Fridge, Not in the Spam Folder

A prompt that designs your automated Housecall Pro postcard program — thank-you notes after big jobs, service reminders before the season, and special offers to past customers — so your brand lives on the fridge.

Estimated time-to-run: 30 minutes to design, then automatic

12**ChatGPT or Claude, plus Housecall Pro postcard campaigns in the Marketing Center****HOW TO INPUT**

Step 1: **Pick your three postcard moments** — after big-ticket jobs (thank-you), 30 days before peak season (service reminder), and slow months (special offer).

Step 2: **Draft the copy for each** using the prompt below, then build them as campaigns in the Marketing Center.

Step 3: **Let them run** — review the conversion numbers quarterly.

PROMPT

You are a direct-mail copywriter for a home-service company using Housecall Pro postcard campaigns. Write the copy for three postcards: (1) the thank-you — sent after jobs over \$[THRESHOLD], warm and specific, includes a referral ask ("know a neighbor who needs [TRADE]?") and the booking link; (2) the seasonal reminder — sent 30 days before [PEAK SEASON], names the exact maintenance task, creates urgency without fear-mongering, ends with the online booking link; (3) the slow-month offer — a genuine special offer for past customers only, with a clear expiration date and the booking link. Each postcard: headline under 8 words, body under 60 words, one call to action. Never use the word "synergy." Company: [NAME, TRADE, SERVICE AREA]. Peak season: [SEASON].

EXPECTED OUTPUT

Three postcard copy sets — headline, body, and call to action — ready to build in the Marketing Center.

Step time estimate: 30 minutes to design

**WORKFLOW 13 OF 20**

The Dormant Customer Win-Back — Wake Up the Quiet List

A one-time campaign prompt that turns your tagged dormant customers into booked jobs — a Housecall Pro email or SMS campaign with a real reason to come back, not a generic "we miss you."

Estimated time-to-run: 30 minutes per campaign

13**ChatGPT or Claude, plus Housecall Pro Campaigns (one-time email/SMS, customer lists)****HOW TO INPUT**

Step 1: **Build the dormant list.** In Housecall Pro, create a customer list of everyone with no job in the last 12+ months — use customer tags to segment by trade or last service type.

Step 2: **Confirm SMS consent** for any text campaign — marketing texts require express consent; email requires opt-in and a verified reply-to address.

Step 3: **Send the campaign** and track which segment books.

PROMPT

You are an email marketer writing a win-back campaign for a home-service company using Housecall Pro Campaigns. Write: (1) the offer — a genuine reason to come back (seasonal tune-up special, free safety inspection with any service, priority booking window), never a fake discount off an inflated price; (2) the email — subject line under 45 characters, body under 150 words, first name personalization, one booking link, one clear call to action; (3) the SMS version — under 160 characters including the company name, same offer, same link; (4) the segment plan — which customer tag gets which version and why (e.g., past tune-up customers get the inspection offer, past install customers get the maintenance plan pitch). Segments: [LIST TAGS AND COUNTS]. Offer: [DESCRIBE].

EXPECTED OUTPUT

A win-back email, its SMS version, and a segment plan for the dormant list.

Step time estimate: 30 minutes per campaign

WORKFLOW 14 OF 20

The Seasonal Blitz — One Automated Flow, Full Schedule

A multi-step campaign prompt that builds your seasonal automated flow in the Marketing Center — email, text, and postcard steps with delays between them — so one build fills the slow weeks.

Estimated time-to-run: 45 minutes to build, then automatic

14

ChatGPT or Claude, plus Housecall Pro automated Campaigns (multi-step flows with delays)

HOW TO INPUT

Step 1: **Pick the season and the service.** Choose the one seasonal service that fills trucks (e.g., AC tune-ups in spring, furnace checks in fall, gutter cleaning before winter).

Step 2: **Map the steps** — the sequence of email, text, and postcard touches and the delay between each (each delay counts from the previous step's completion).

Step 3: **Build the flow** in the Marketing Center and let it run ahead of the season.

PROMPT

You are a campaign strategist building a seasonal automated flow for a home-service company using Housecall Pro Campaigns. Design a 4-step flow: step 1 – email, the "season is coming" education piece (why this maintenance matters now, under 150 words); step 2 (7 days later) – text, the booking nudge with the online booking link, under 160 characters; step 3 (10 days later) – postcard to non-openers, the visual reminder with the offer; step 4 (7 days later) – final email, the "last call" with the booking deadline. For each step write the full copy, the audience (which customer tags), and the delay. Include the AI "Write it for me" starting point note for whoever builds it in the Marketing Center. Rules: one offer across all steps – never change the deal mid-flow; every step links to online booking. Season: [SEASON]. Service: [SERVICE]. Offer: [DESCRIBE].

EXPECTED OUTPUT

A complete 4-step automated campaign flow with copy, audiences, and delays.

Step time estimate: 45 minutes to build

**WORKFLOW 15 OF 20**

The Referral & Loyalty Push — Turn Best Customers Into a Sales Force

A prompt that builds your referral postcard campaign around your top customers — found with the Housecall Pro Reporting tab — so your best 20 customers send you their neighbors twice a year.

Estimated time-to-run: 45 minutes, run twice a year

15

ChatGPT or Claude, plus Housecall Pro Reporting (Job Revenue Earned by Customer Name) and postcard campaigns

HOW TO INPUT

Step 1: **Find your Top 20.** In Housecall Pro, open the Reporting tab → Jobs dashboard → "Job Revenue Earned," set the date range to the last 12 months, group by Customer Name, and export the list.

Step 2: **Tag them** — select those customers and add a "Top 20" tag via Actions → Add Tag.

Step 3: **Build the referral postcard campaign** to that tag, twice a year.

PROMPT

You are a loyalty marketer for a home-service company using Housecall Pro. Write the twice-yearly referral campaign for our Top 20 customers: (1) the postcard copy — headline under 8 words, body under 60 words, thanking them by name for their loyalty, offering a genuine referral reward (a real dollar credit or gift card, stated plainly), and the booking link for their friends; (2) the follow-up email — sent 2 weeks after the postcard, same offer, under 120 words; (3) the tracking plan — how to attribute referred jobs (ask "who referred you" at booking, tag the new customer with the referrer's name). Rules: the reward must be real and payable — never a vague "special gift"; run it on a fixed cadence (spring and fall) so customers start expecting it. Company: [NAME, TRADE].

EXPECTED OUTPUT

Referral postcard copy, follow-up email, and a twice-yearly tracking plan.

Step time estimate: 45 minutes

**WORKFLOW 16 OF 20**

The Tech Scorecard — Coach With Numbers, Not Gut Feel

A prompt that turns the Housecall Pro KPI Dashboard's Tech Leaderboard into a monthly coaching sheet — revenue, job count, average ticket, conversion rate, and rating per tech — so reviews are about data, not vibes.

Estimated time-to-run: 20 minutes per month

16

ChatGPT or Claude, plus the Housecall Pro KPI Dashboard (Tech Leaderboard, technician efficiency reporting)

HOW TO INPUT

Step 1: **Pull the leaderboard.** Open the KPI Dashboard and export the Tech Leaderboard — revenue, job count, average ticket, conversion rate, and customer rating per tech for the month.

Step 2: **Copy the numbers and replace the placeholders** — no names in the prompt beyond first names; this is an internal coaching doc.

Step 3: **Hold the one-on-ones** — one strength, one fix per tech.

PROMPT

You are an operations manager writing monthly tech coaching sheets for a home-service company using Housecall Pro. For each tech below, write: (1) the headline — their strongest metric this month in one sentence; (2) the one fix — the single metric holding them back and the specific behavior that moves it (e.g., low conversion → present the good-better-best options on every estimate; low average ticket → pitch one add-on per job); (3) the 3-line review script — open with the strength, name the fix, agree on the one behavior change for next month. Rules: coach the behavior, never attack the person; compare each tech to their own last month, not to the top tech — except to show what's possible. Leaderboard: [PASTE TECH METRICS: FIRST NAME, REVENUE, JOB COUNT, AVG TICKET, CONVERSION, RATING].

EXPECTED OUTPUT

A one-page coaching sheet per tech: headline strength, one fix, and the review script.

Step time estimate: 20 minutes per month

**WORKFLOW 17 OF 20**

The Pricebook Tune-Up — Prices You Can Trust

A quarterly prompt that reviews your Housecall Pro price book against the AI pricing benchmarks — finding the line items you're undercharging on — and writes the update plan, including tech commission impacts.

Estimated time-to-run: 45 minutes per quarter

17

ChatGPT or Claude, plus the Housecall Pro price book (AI-driven pricing benchmarks, price book commissions)

HOW TO INPUT

Step 1: **Export the price book.** List your top 30 line items by volume with current prices.

Step 2: **Note the AI benchmark flags** — which items the benchmarks say are priced below market, and by how much.

Step 3: **Update and communicate** — change the prices, then tell the techs what changed and why (it affects their commissions).

PROMPT

You are a pricing analyst for a home-service company using Housecall Pro. Review these price-book line items against their AI pricing benchmarks and write: (1) the raise list — items priced meaningfully below benchmark, with the recommended new price and the annual revenue impact at current volume; (2) the hold list — items correctly priced, leave alone; (3) the watch list — items priced above benchmark that may be costing conversions, with a note to check close rates before touching them; (4) the tech memo — a 5-line internal note explaining which prices changed, that commissions are calculated per line item so raises raise their pay too, and the effective date. Never raise prices without telling the techs first. Line items: [PASTE TOP 30: ITEM, CURRENT PRICE, BENCHMARK GUIDANCE, MONTHLY VOLUME].

EXPECTED OUTPUT

A raise/hold/watch price list with revenue impact and the internal tech memo.

Step time estimate: 45 minutes per quarter

**WORKFLOW 18 OF 20**

The Daily Numbers Huddle — 10 Minutes, Whole Business

A prompt that turns the Housecall Pro KPI Dashboard into a 10-minute daily owner briefing — revenue, pipeline health, and memberships — so you start every day knowing exactly where the business stands.

Estimated time-to-run: 10 minutes each morning

18

ChatGPT or Claude, plus the Housecall Pro KPI Dashboard (Revenue Overview, Work Metrics, Memberships)

HOW TO INPUT

Step 1: **Screenshot or copy the dashboard.** Each morning, pull the KPI Dashboard: revenue overview, work metrics (job pipeline health), and the memberships section.

Step 2: **Copy the key figures and replace the placeholders** — revenue today vs. goal, scheduled revenue this week, pipeline value, active memberships.

Step 3: **Read the brief, then run the day** — one decision per morning, max.

PROMPT

You are a business coach writing a daily owner briefing for a home-service company using Housecall Pro. Below are this morning's KPI Dashboard figures. Write a half-page brief as three blocks: (1) Money — revenue booked today vs. daily goal, revenue scheduled this week, and whether the week is on track, in two sentences; (2) Pipeline — work metrics: jobs scheduled, estimates outstanding and their total value, and the one bottleneck (not enough leads, estimates not closing, schedule full but techs idle); (3) Recurring — active memberships, membership revenue this month vs. last, and the one action that grows it today. End with the single highest-leverage decision for today — one line, one owner, one deadline. Plain English, no jargon. Figures: [PASTE DASHBOARD NUMBERS]. Today's date: [DATE].

EXPECTED OUTPUT

A half-page daily brief with the money, pipeline, and recurring picture — plus one decision.

Step time estimate: 10 minutes

**WORKFLOW 19 OF 20**

The Pipeline Sweep — Every Lead and Estimate Gets a Next Step

A weekly prompt that sweeps your Housecall Pro Pipeline — leads and estimates with no next action — and assigns every single one a dated follow-up, so nothing goes stale.

Estimated time-to-run: 20 minutes per week

19**ChatGPT or Claude, plus Housecall Pro Pipeline (leads and estimates) and customer tags****HOW TO INPUT**

Step 1: **Pull the stale pipeline.** List every lead and estimate with no activity in 7+ days — name, stage, value, days idle, and customer tags.

Step 2: **Copy the list and replace the placeholders.** First names and values only — no full addresses or financial account details in the prompt.

Step 3: **Assign and execute** — every item leaves the sweep with an owner and a date.

PROMPT

You are a sales manager running the weekly pipeline sweep for a home-service company using Housecall Pro. For each lead and estimate below, write: the next step (call, text, email, or site visit), the owner (name the role), the date it's due, and the one-line message or talking point for that step. Rules: nothing gets "just checking in" — every touch has a reason (new opening, expiring estimate, seasonal deadline); anything idle 30+ days gets either a final breakup message or moves to the dormant win-back campaign — decide which and say why. Sort by value, highest first. Pipeline: [PASTE STALE LEADS AND ESTIMATES: FIRST NAME, STAGE, VALUE, DAYS IDLE, TAGS].

EXPECTED OUTPUT

A next-step assignment for every stale lead and estimate, sorted by value.

Step time estimate: 20 minutes per week

**WORKFLOW 20 OF 20**

The Integration Check — Pick Your Next Add-On Without the Regret

A prompt that evaluates Housecall Pro integrations and add-ons against your actual pain points — QuickBooks sync, the public API, the AI call-answering agent, and third-party apps — so you buy the one that solves a real problem.

Estimated time-to-run: 45 minutes

20**ChatGPT or Claude****HOW TO INPUT**

Step 1: **List the office's top three pain points** (missed calls after hours, books not reconciling, reviews lagging, no-show rate, manual data entry).

Step 2: **Shortlist the candidates** — QuickBooks Online sync, the public API (MAX plan) for custom connections, the AI-powered call answering agent, and any third-party app from the integrations directory. Confirm plan requirements before evaluating (the public API needs MAX).

Step 3: **Score two finalists with a 30-day trial** before committing — never buy on the demo alone.

PROMPT

You are an operations manager evaluating software integrations for a home-service company using Housecall Pro. For each candidate integration below, write a one-page evaluation: (1) the problem it claims to solve, in your office's words; (2) fit check — plan required (note: the public API is on the MAX plan), whether it reads, writes, or syncs both ways, and who supports it when it breaks — Housecall Pro or the vendor; (3) the 3 questions to ask on the demo call (suggested: what happens to my data if I cancel, what does it cost per month all-in including any per-transaction fees, how long does setup actually take); (4) the 30-day trial success metric — one number that decides keep vs. cancel (examples: after-hours calls answered, hours of manual entry eliminated, reconciliation time). Then rank the candidates and name the single winner with one reason. Known integration options to consider: QuickBooks Online sync, the public API with webhooks (customer, estimate, invoice, job, lead, and payment events), the AI-powered call answering agent. Pain points: [LIST TOP 3]. Candidates: [LIST INTEGRATIONS UNDER CONSIDERATION].

EXPECTED OUTPUT

A one-page evaluation per candidate, a ranked shortlist, and a single winner with a trial success metric.

Step time estimate: 45 minutes
