

The Jobber Integration Playbook

Twenty AI workflows for home-service contractors running Jobber — built for office managers, dispatchers, and owners.

What's inside

Quote follow-up and stale-quote rescue workflows from your real Jobber quotes report

Speed-to-lead, dispatch, and day-before confirmation workflows from your schedule

Invoice-chasing and collections sequences built on Jobber's automated follow-ups

Review generation, maintenance-plan sales, and seasonal campaigns

A monthly numbers review built on Jobber's Insights dashboard and reports

12 months of free updates — every improvement ships to your inbox

WORKFLOW 01 OF 20

The 5-Minute Quote Follow-Up — Automated + Personal Touches

A two-layer prompt that pairs Jobber's automated quote follow-ups with a personal message sequence: the AI writes the human follow-ups (day 2 check-in, day 7 nudge, day 14 direct ask) while Jobber's automation handles the baseline reminders — so no quote goes quiet.

Estimated time-to-run: 5 minutes per quote

01

ChatGPT or Claude, plus Jobber's automated quote follow-ups (Settings > Automations)

HOW TO INPUT

Step 1: **Pull the open quotes.** In Jobber, open Quotes and filter for sent quotes with no response. Note each client's name, the quote total, and how many days since it was sent.

Step 2: **Copy the quote details and replace the placeholders** — use first names only, never paste full addresses or other personal details into the AI.

Step 3: **Schedule the personal touches** alongside Jobber's automated follow-ups: send the day-2 text yourself, let automation run, then send the day-14 message.

PROMPT

You are an office manager at a home-service company following up on an unsent-decision quote. Write three short follow-up messages for the client below: (1) a day-2 text under 40 words — friendly, references the specific work quoted, one yes/no question; (2) a day-7 email — 3 short paragraphs, adds one useful detail (timeline, seasonal angle, or a common question answered), ends with a soft ask; (3) a day-14 direct ask — polite but plain, asks outright whether they want to move forward or if the project is on hold, gives them an easy out. No exclamation points, no fake urgency, no discounts invented out of thin air. Client first name: [FIRST NAME]. Work quoted: [SERVICE + ONE-LINE SCOPE]. Quote total: [AMOUNT]. Days since sent: [NUMBER].

EXPECTED OUTPUT

Three ready-to-send follow-up messages (text, email, direct ask) matched to the quote's age.

Step time estimate: 5 minutes per quote

WORKFLOW 02 OF 20

Stale Quote Rescue — The 14-Day Win-Back List

A prompt that turns your Jobber quotes report into a prioritized rescue list: which stale quotes are worth a personal call, what to say, and which ones to let go — using the report's "viewed in client hub" and status columns to separate the warm from the dead.

Estimated time-to-run: 20 minutes per week

02

ChatGPT or Claude, plus the Jobber quotes report (Insights > Reports > Quotes; export to CSV)

HOW TO INPUT

Step 1: Export the quotes report. In Jobber, go to Insights > Reports > Quotes, set your date range, and export to CSV. Sort by sent date and status.

Step 2: Copy the stale-quote rows — client first name, service quoted, total, days since sent, and whether it shows as viewed in client hub. Keep full customer PII out of the paste.

Step 3: Work the list top-down — call the warm ones, email the lukewarm ones, archive the dead ones.

PROMPT

You are a sales-minded office manager rescuing stale quotes. For each quote below, do three things: (1) score it warm, lukewarm, or dead — warm means viewed in client hub or replied at least once; lukewarm means sent 14+ days ago with no view; dead means 60+ days old with no engagement; (2) for warm and lukewarm quotes, write a one-paragraph re-engagement email that references the specific work and gives one new reason to talk now (season, schedule opening, material price note — only if true); (3) for dead quotes, write a one-line breakup note that leaves the door open. Keep every message under 80 words. Quotes: [PASTE QUOTE ROWS — FIRST NAME, SERVICE, TOTAL, DAYS SINCE SENT, VIEWED/NOT VIEWED].

EXPECTED OUTPUT

A scored rescue list with a ready-to-send message per quote and a clear call/email/archive action.

Step time estimate: 20 minutes per week

WORKFLOW 03 OF 20

Speed to Lead — The New Request Triage

A prompt that turns each new Jobber request into an instant, personal first response: the AI drafts the reply text and the qualifying questions from the request details, so every lead hears back in minutes — while Jobber's request form and auto-lead tagging keep the pipeline organized.

Estimated time-to-run: 3 minutes per new request

03

ChatGPT or Claude, plus Jobber request forms (website embed) and two-way text messaging

HOW TO INPUT

Step 1: **Read the new request.** When Jobber notifies you of a new request (it is auto-tagged as a lead), open it and note the service requested, the client's first name, and anything they wrote in the form.

Step 2: **Copy the request details and replace the placeholders** — first name only, no full address in the AI.

Step 3: **Send the response** by text or email within the hour, and log the reply in the request's notes.

PROMPT

You are the dispatcher at a busy home-service company. A new lead just came in through our website request form. Write: (1) an instant first-response text under 40 words — thanks them by first name, names the service they asked about, and says exactly when we will follow up with a quote or a call; (2) three qualifying questions we should ask before quoting (things like access, timing, and scope — specific to this service); (3) a one-line internal note for the request record summarizing the lead and its priority (hot, warm, cold) with one reason. Tone: fast, human, professional. Request details: [FIRST NAME, SERVICE REQUESTED, WHAT THEY WROTE, DATE/TIME SUBMITTED].

EXPECTED OUTPUT

An instant reply text, three qualifying questions, and a one-line internal priority note.

Step time estimate: 3 minutes per new request

WORKFLOW 04 OF 20

Good-Better-Best — Tiered Quote Packages That Sell Themselves

A prompt that builds three-tier quote options (good, better, best) from a single scope of work, designed for Jobber's optional line items — so clients pick their own upgrade in client hub instead of haggling on a single number.

Estimated time-to-run: 15 minutes per quote

04 ChatGPT or Claude, plus Jobber quotes with optional line items (and line item images)

HOW TO INPUT

Step 1: **Define the base scope.** Write down the core work, then list 2-4 sensible add-ons or upgrades (better materials, extended warranty terms you actually offer, maintenance add-ons).

Step 2: **Paste the scope and replace the placeholders** — real service names and real prices or price ranges only.

Step 3: **Build the quote in Jobber** using optional line items for the better/best tiers, and add a line item image where it helps the client see the difference.

PROMPT

You are a service manager building a good-better-best quote. Take the scope below and create three tiers: GOOD — the core work done right, nothing extra; BETTER — core work plus the one or two upgrades most clients actually want; BEST — the full package with every sensible add-on. For each tier write: the tier name, a 2-sentence plain-English description of what is included, and 2-3 line items with prices or price ranges. Rules: every add-on must be something we genuinely offer; never invent warranties, guarantees, or services we do not provide; keep descriptions free of jargon. Base scope: [SERVICE + SCOPE]. Add-ons we offer: [LIST]. Typical price range: [RANGE].

EXPECTED OUTPUT

Three quote tiers with descriptions and line items, ready to build as optional line items in Jobber.

Step time estimate: 15 minutes per quote

WORKFLOW 05 OF 20

The Dispatch Board — Tomorrow's Route in 20 Minutes

A prompt that turns tomorrow's Jobber schedule into a clean dispatch plan: route order, tech assignments by skill, and the customer messages to send — using Jobber's drag-and-drop calendar and map routing as the source of truth.

Estimated time-to-run: 20 minutes each evening

05 ChatGPT or Claude, plus the Jobber schedule (drag-and-drop calendar) and map routing

HOW TO INPUT

Step 1: **Pull tomorrow's visits.** In Jobber, open the schedule for tomorrow: visit addresses (area or cross-streets only for the AI — never full customer addresses), job type, assigned tech, and time windows.

Step 2: **Copy the visit list and replace the placeholders** — keep it to areas, job types, and tech first names.

Step 3: **Apply the plan** — drag and drop visits into the AI's suggested order in Jobber and send the customer texts.

PROMPT

You are a dispatcher planning tomorrow's route for a home-service crew. Given the visits below, produce: (1) a suggested visit order that minimizes drive time, grouped by area; (2) any tech reassignments you would recommend and why (match job type to tech skill — HVAC techs on HVAC calls, and so on); (3) a short "on my way" style text template for each visit with the time window filled in. Flag any day that looks overbooked and say which visit you would move and where. Visits: [AREA, JOB TYPE, CURRENT TECH, TIME WINDOW — one per line]. Tech skills: [TECH FIRST NAME — SKILLS].

EXPECTED OUTPUT

An ordered route plan, reassignment notes, per-visit text templates, and an overbooking flag.

Step time estimate: 20 minutes each evening

WORKFLOW 06 OF 20

The Day-Before Lock-In — Confirmations That Stick

A prompt that writes your day-before confirmation messages — firm enough to hold the schedule, warm enough to keep the customer — layered on top of Jobber's automated visit reminders so nothing slips through.

Estimated time-to-run: 10 minutes per day

06 ChatGPT or Claude, plus Jobber automated visit reminders (Settings > Automations)

HOW TO INPUT

Step 1: **Check tomorrow's confirmed visits** in the Jobber schedule and note any that have not been confirmed by the customer.

Step 2: **Copy the unconfirmed list and replace the placeholders** — first names and time windows only.

Step 3: **Send the confirmations** by text, and mark confirmed visits in Jobber.

PROMPT

You are an office coordinator confirming tomorrow's service visits. Write a confirmation text for each visit below: under 40 words, includes the client's first name, the service, and the arrival window; asks for a simple yes/no confirm; includes one line on what to do if they need to reschedule (reply to the text – do not just not answer). Then write a second, firmer version for anyone who does not confirm by evening – still polite, but clear that the slot may be released. Visits: [FIRST NAME, SERVICE, ARRIVAL WINDOW – one per line].

EXPECTED OUTPUT

A confirmation text per visit plus a firmer evening follow-up version.

Step time estimate: 10 minutes per day

WORKFLOW 07 OF 20

The Empty Slot Sprint — Fill Cancellations Same-Day

A prompt that turns a same-day cancellation into a filled slot within the hour: the AI ranks who to call from your client and quote history and writes the exact text for each — you work the list while Jobber's two-way texting keeps the conversation in one thread.

Estimated time-to-run: 10 minutes per cancellation

07 ChatGPT or Claude, plus Jobber two-way text messaging and client history

HOW TO INPUT

Step 1: **Find candidates.** In Jobber, look for clients with recent quotes not yet approved, or past clients due for the same service — note first names and what they need.

Step 2: **Copy the candidate list and replace the placeholders** — first names only.

Step 3: **Text top-down** — send the AI's messages in order and book the first yes directly into the schedule.

PROMPT

You are a dispatcher with a same-day opening to fill. Rank the candidates below by likelihood to say yes (recent quote > past client due for service > old lead), and write a text for each under 40 words: name them, name the specific opening (today + time window + tech), give one reason it is good for them, and end with a yes/no question. No exclamation points, no fake scarcity. Opening: [DATE, TIME WINDOW, SERVICE TYPE]. Candidates: [FIRST NAME — WHY THEY ARE A FIT — one per line].

EXPECTED OUTPUT

A ranked call list with a ready-to-send text per candidate.

Step time estimate: 10 minutes per cancellation

WORKFLOW 08 OF 20

The Tech Debrief — Turn Field Notes Into Client Updates

A prompt that converts your tech's Jobber checklist answers, photos, and job notes into a polished client-facing update: what was done, what was found, and what is recommended next — so the office sends professional recaps without rewriting field shorthand.

Estimated time-to-run: 10 minutes per job

08

ChatGPT or Claude, plus Jobber job checklists (with photos and image markup) and internal notes

HOW TO INPUT

Step 1: **Gather the field record.** Open the completed visit in Jobber: read the checklist answers, look at the before/after photos, and copy the tech's notes.

Step 2: **Paste the field notes and replace the placeholders** — describe photos in words for the AI (do not upload customer property photos); first names only.

Step 3: **Send the recap** to the client by email or text, and attach the actual photos from Jobber.

PROMPT

You are an office manager writing a post-visit recap for a homeowner. Turn the field notes below into a client email: (1) what we did today – 2-3 sentences in plain English; (2) what we found – any issues spotted, described without jargon or alarm; (3) what we recommend next – only real recommendations, with honest framing of urgency (now, soon, whenever). Keep it under 150 words, warm and professional, no upsell pressure. Field notes: [TECH'S CHECKLIST ANSWERS + NOTES, PHOTOS DESCRIBED IN WORDS]. Client first name: [FIRST NAME]. Service: [SERVICE].

EXPECTED OUTPUT

A polished client recap email ready to send with the Jobber photos attached.

Step time estimate: 10 minutes per job

WORKFLOW 09 OF 20

The On-Site Upsell — Quote Additional Work Before You Leave

A prompt that helps techs build a clean additional-work quote while still on site: the AI drafts the quote description and the customer message, the tech builds it in the Jobber mobile app as a new quote or line items — capturing revenue that used to require a second trip.

Estimated time-to-run: 10 minutes on site

09

ChatGPT or Claude, plus the Jobber mobile app (create quotes on site)

HOW TO INPUT

Step 1: **Note what the tech found.** When the tech spots legitimate additional work, have them jot the finding, the recommended fix, and a rough price range in the job notes.

Step 2: **Paste the finding and replace the placeholders** — plain description of the issue, real price range.

Step 3: **Build and send the quote** from the Jobber mobile app before leaving the property.

PROMPT

You are a service tech writing up additional work found on site. Write: (1) a quote line-item description — 2 sentences, plain English, names the problem and the fix, no scare tactics; (2) a short spoken script for the tech — under 60 words — to explain it to the homeowner at the door, ending with "want me to add it to today's quote?"; (3) a follow-up text in case they want to think about it. Rules: describe only what was actually found; never invent urgency; if it can honestly wait, say so. Finding: [WHAT WAS FOUND]. Recommended fix: [FIX]. Price range: [RANGE].

EXPECTED OUTPUT

A quote line-item description, a door-side script, and a think-it-over text.

Step time estimate: 10 minutes on site

WORKFLOW 10 OF 20

The Collections Ladder — Get Paid Without the Awkward Call

A prompt that builds a full invoice-chasing sequence — gentle reminder, firm nudge, final notice — calibrated to how overdue the invoice is, layered over Jobber's automated invoice follow-ups so the system handles the routine and you handle the exceptions.

Estimated time-to-run: 15 minutes per collections block

10

ChatGPT or Claude, plus Jobber automated invoice follow-ups and invoice reminders (Settings > Automations)

HOW TO INPUT

Step 1: Pull the overdue list. In Jobber, open Invoices and filter for awaiting payment / past due. Note invoice number, amount, days overdue, and client first name.

Step 2: Copy the overdue rows and replace the placeholders — invoice numbers and amounts are fine; keep it to first names.

Step 3: Send in sequence — let Jobber's automation run the early reminders, and personally send the AI's firmer messages at 14 and 30 days.

PROMPT

You are an accounts coordinator collecting overdue invoices without burning relationships. For each invoice below, write three messages: (1) the gentle reminder — assumes oversight, states invoice number, amount, and original due date, includes the payment link ask; (2) the firm nudge for 14+ days overdue — direct, references the terms they agreed to, asks for a specific payment date; (3) the final notice for 30+ days — plain about next steps (pause on future work until the balance clears), no threats you would not follow through on. Every message under 80 words. Invoices: [INVOICE #, AMOUNT, DAYS OVERDUE, CLIENT FIRST NAME — one per line]. Payment terms: [TERMS, e.g. NET 15].

EXPECTED OUTPUT

A three-stage collection message per invoice, matched to days overdue.

Step time estimate: 15 minutes per collections block

WORKFLOW 11 OF 20

The Review Engine — 5-Star Reviews on Autopilot

A prompt that writes the review-request copy for Jobber's automated review asks — the initial ask plus the follow-ups — and drafts replies to the reviews you receive, so your online reputation compounds after every closed job.

Estimated time-to-run: 20 minutes to set up, 5 minutes per review reply

11

ChatGPT or Claude, plus Jobber automated review requests (triggered on job close or visit completed, with automatic follow-ups)

HOW TO INPUT

Step 1: **Check your review automation.** In Jobber, confirm review requests are turned on (Settings > Automations > Reviews) and note whether you send by email, text, or both.

Step 2: **Replace the placeholders** — your review link, business name, and the services you want named.

Step 3: **Paste the automation copy into Jobber**, and use the reply drafts for each new review that lands.

PROMPT

You are a marketing-minded office manager setting up review collection. Write: (1) the initial review ask – under 160 characters if text, warm, thanks them by first name, names the service, one link, no begging; (2) a first follow-up for 3 days later – shorter, assumes they meant to; (3) a second follow-up for 5 days later – final, gracious, no guilt; (4) three review-reply templates – one for 5-star, one for 4-star, one for a negative review (acknowledge, take it offline, give a name and number). Business: [BUSINESS NAME]. Service: [SERVICE]. Review link: [URL].

EXPECTED OUTPUT

Review ask + two follow-ups ready to paste into Jobber's automation, plus reply templates for 5-star, 4-star, and negative reviews.

Step time estimate: 20 minutes to set up, 5 minutes per review reply

WORKFLOW 12 OF 20

The Maintenance Plan Pitch — Recurring Revenue That Sells Itself

A prompt that builds your maintenance-plan offer — tiers, pricing logic, and the pitch email — designed to be set up as Jobber recurring jobs with automatic payments, so sold plans bill themselves.

Estimated time-to-run: 30 minutes to build the offer

12

ChatGPT or Claude, plus Jobber recurring jobs with automatic payments (Jobber Payments)

HOW TO INPUT

Step 1: **Define the plan.** Decide visit frequency (e.g., twice-yearly HVAC tune-ups, quarterly pest visits), what is included per visit, and the annual or per-visit price.

Step 2: **Paste the plan details and replace the placeholders** — real services, real prices, real visit counts.

Step 3: **Create the recurring job in Jobber** for each sold plan and turn on automatic payments so billing runs itself.

PROMPT

You are a service manager packaging a maintenance plan. Build: (1) the plan offer – name, what is included per visit (bullet list), visit frequency, and annual price, written in plain English a homeowner understands in 30 seconds; (2) a pitch email under 150 words – leads with the one headache the plan removes (breakdowns, forgotten filter changes, surprise bills), states the price plainly, ends with a yes/no question; (3) a one-paragraph script for techs to mention it on site. Rules: only include services you genuinely perform; never promise priority scheduling or discounts you will not honor. Plan details: [SERVICE TYPE, VISITS PER YEAR, INCLUDED PER VISIT, ANNUAL PRICE].

EXPECTED OUTPUT

A plan offer sheet, a pitch email, and a tech mention script — ready to sell and set up as recurring jobs.

Step time estimate: 30 minutes to build the offer

WORKFLOW 13 OF 20

The Seasonal Blitz — Fill Slow Weeks With One Campaign

A prompt that turns your Jobber client list into a targeted seasonal campaign: the AI segments who to contact and writes the emails, and Jobber's Mailchimp integration sends them — one afternoon of work that fills next month's schedule.

Estimated time-to-run: 45 minutes per campaign

13

ChatGPT or Claude, plus the Jobber–Mailchimp integration and the clients report (Insights > Reports)

HOW TO INPUT

Step 1: **Export your client list.** In Jobber, go to Insights > Reports > Clients and export to CSV. Sort by last job date and service type.

Step 2: **Copy the segment summary and replace the placeholders** — counts and service types, not full client records; keep PII out of the AI.

Step 3: **Build the campaign in Mailchimp** from the Jobber sync and send.

PROMPT

You are a marketer for a home-service company planning a seasonal campaign. Given the segments below, write: (1) a campaign email per segment — subject line plus body under 150 words, one clear offer tied to the season, one call to action; (2) a send order — which segment gets it first and why; (3) a subject-line alternative for each. Rules: every offer must be real and bookable; no fake deadlines ("offer ends Friday" unless it truly does); keep the tone neighborly, not salesy. Segments: [SEGMENT NAME — WHO THEY ARE — COUNT, e.g. "Furnace tune-up clients, no visit in 12+ months — 140"]. Season and offer: [SEASON, OFFER].

EXPECTED OUTPUT

One email per segment with subject lines, a send order, and alternate subject lines — ready for Mailchimp.

Step time estimate: 45 minutes per campaign

WORKFLOW 14 OF 20

The Dormant Client Wake-Up — Win Back Old Customers

A prompt that finds your dormant clients in Jobber and writes the reactivation message for each tier: recent-but-quiet gets a check-in, long-gone gets an offer — sent through two-way texting where a text beats an email.

Estimated time-to-run: 25 minutes per month

14 ChatGPT or Claude, plus the Jobber clients report and two-way text messaging

HOW TO INPUT

Step 1: **Find the dormant.** In Jobber, open Insights > Reports > Clients, sort by last job date, and pull clients with no job in 12+ months. Group into two tiers: quiet (12-24 months) and gone (24+ months).

Step 2: **Copy the tier summaries and replace the placeholders** — first names and last service only, no full records in the AI.

Step 3: **Send the messages** — text the quiet tier, email the gone tier with the offer.

PROMPT

You are an office manager winning back dormant clients. Write two messages: (1) for the QUIET tier — a check-in text under 40 words, warm, references their last service by name, asks if everything is still running well, no discount; (2) for the GONE tier — an email under 120 words, acknowledges it has been a while, gives one genuine reason to come back (a real seasonal offer or a real service reminder), ends with a simple booking ask. Then write a one-line internal note template for logging the outreach outcome per client. Client examples: [FIRST NAME — LAST SERVICE — MONTHS SINCE LAST JOB — TIER, 2-3 examples]. Real offer for gone tier (if any): [OFFER OR "NONE"].

EXPECTED OUTPUT

A check-in text, a win-back email, and an outcome-logging template.

Step time estimate: 25 minutes per month

WORKFLOW 15 OF 20

The Salesperson Scorecard — Coach Your Closers

A prompt that turns Jobber's salesperson performance data into actual coaching: who is closing, who is quoting but not converting, and the one conversation to have with each — so the report becomes action instead of a number nobody looks at.

Estimated time-to-run: 20 minutes per month

15

ChatGPT or Claude, plus salesperson attribution on Jobber quotes, jobs, and invoices (Insights > Reports > Salesperson Performance)

HOW TO INPUT

Step 1: **Pull the salesperson report.** In Jobber, make sure each quote has a salesperson assigned, then open the salesperson performance report: sent quotes, converted quotes, and conversion rate per person.

Step 2: **Copy the per-person numbers and replace the placeholders** — first names and numbers only.

Step 3: **Have the coaching conversations** — one specific, kind, direct talk per person.

PROMPT

You are a business owner coaching a small sales team. Given the numbers below, write for each salesperson: (1) a two-sentence read of their month — what the numbers say, no sugarcoating; (2) the ONE thing to work on next month (follow-up speed, quote quality, close ask — pick from the data, not generic advice); (3) a 3-line script for opening the coaching conversation. Keep it honest and respectful — these are people, not metrics. Numbers: [FIRST NAME — QUOTES SENT — QUOTES CONVERTED — CONVERSION RATE — one per line].

EXPECTED OUTPUT

A per-person coaching brief: read, one focus area, and a conversation opener.

Step time estimate: 20 minutes per month

WORKFLOW 16 OF 20

The Profit Check — Which Jobs Actually Make Money

A prompt that turns Jobber's Insights dashboard into a plain-English profit review: which service types earn, which ones just keep techs busy, and where pricing needs to move — no accounting degree required.

Estimated time-to-run: 30 minutes per month

16

ChatGPT or Claude, plus the Jobber Insights dashboard (revenue, average job value, profit and loss, recurring vs one-off)

HOW TO INPUT

Step 1: **Screenshot or copy the numbers.** In Jobber, open Insights: note revenue by service type (or your closest breakdown), average job value, and the profit-and-loss summary for the month.

Step 2: **Paste the numbers and replace the placeholders** — aggregate figures only, no client-level data.

Step 3: **Act on the findings** — adjust pricing, push the winners, fix or drop the losers.

PROMPT

You are a no-nonsense business advisor reviewing a contractor's month. Given the numbers below, write: (1) a ranking of service types by profitability with a one-line verdict each (grow it, price it up, or cut it); (2) three specific pricing or packaging moves for next month — concrete, e.g. "raise the drain-cleaning base price" not "optimize pricing"; (3) one red flag to watch (a cost or trend heading the wrong way). Base everything only on the numbers given — do not invent costs or margins. Numbers: [SERVICE TYPE — REVENUE — APPROXIMATE MARGIN OR COST NOTE — one per line]. Average job value: [AMOUNT]. Month-over-month trend: [UP/FLAT/DOWN + NOTE].

EXPECTED OUTPUT

A ranked profit verdict per service type, three pricing moves, and one red flag.

Step time estimate: 30 minutes per month

WORKFLOW 17 OF 20

The Lead Source Audit — Where Your Best Jobs Come From

A prompt that turns Jobber's lead source and clients reports into a marketing budget decision: which channels bring jobs that close, which bring tire-kickers — so next quarter's spend follows the data.

Estimated time-to-run: 30 minutes per quarter

17

ChatGPT or Claude, plus the Jobber lead source report and clients report (Insights > Reports), with UTM tracking on request and booking links

HOW TO INPUT

Step 1: **Pull the reports.** In Jobber, open Insights > Reports > Lead source: clients, quotes, jobs, revenue, and conversion rate per source for the quarter.

Step 2: **Paste the per-source numbers and replace the placeholders** — aggregate only.

Step 3: **Reallocate** — shift spend toward what converts, cut what does not.

PROMPT

You are a marketing analyst for a home-service business. Given the lead source numbers below, write: (1) a ranking of sources by revenue per lead with a one-line verdict each (double down, keep, or cut); (2) the single biggest insight — the one number that should change next quarter's budget; (3) a 3-bullet plan for next quarter: where the money goes, what gets cut, and what to test. Use only the numbers provided; do not invent industry benchmarks. If a source has too few leads to judge, say so instead of guessing. Numbers: [SOURCE — LEADS — QUOTES — JOBS — REVENUE — one per line]. Marketing spend per source (if known): [SOURCE — SPEND].

EXPECTED OUTPUT

A ranked source verdict, one key insight, and a 3-bullet next-quarter plan.

Step time estimate: 30 minutes per quarter

WORKFLOW 18 OF 20

The Monthly Snapshot Review — Turn Numbers Into Next Moves

A prompt that converts Jobber's monthly Business Snapshot email (revenue, jobs, new customers, quotes sent, quote conversion rate) into a one-page action plan — so the numbers email becomes decisions, not just reading material.

Estimated time-to-run: 20 minutes per month

18

ChatGPT or Claude, plus Jobber Business Goals and the monthly Business Snapshot email

HOW TO INPUT

Step 1: **Open the snapshot.** On the first of the month, the account owner gets the Business Snapshot email: revenue, total jobs, new customers, quotes sent, new leads, quote conversion rate, and progress toward goals.

Step 2: **Paste the key numbers and replace the placeholders** — the snapshot figures plus your goal targets.

Step 3: **Run the plan** — assign each action to a person and a date.

PROMPT

You are a business coach turning a monthly report into an action plan. Given the snapshot below, write a one-page plan: (1) the headline — one sentence on how the month went versus goals; (2) three actions for this month, each with an owner (owner, office manager, dispatcher) and a done-by date — specific and small enough to actually finish; (3) one thing to stop doing. Be direct: if quote conversion slipped, say so and say what fixes it. Snapshot: [REVENUE, JOBS, NEW CUSTOMERS, QUOTES SENT, NEW LEADS, QUOTE CONVERSION RATE]. Goals: [GOAL 1 — TARGET, GOAL 2 — TARGET]. Last month's actions completed: [YES/NO + NOTE].

EXPECTED OUTPUT

A one-page monthly action plan: headline, three owned actions, one thing to stop.

Step time estimate: 20 minutes per month

WORKFLOW 19 OF 20

The Pipeline Sweep — Every Opportunity Gets a Next Step

A weekly prompt that turns Jobber's Sales Pipeline board into a clean sweep: every open opportunity gets a status, a next action, and an owner — plus a look at the Sales Outcomes report to learn from what was won and lost.

Estimated time-to-run: 25 minutes per week

19

ChatGPT or Claude, plus the Jobber Sales Pipeline and the Sales Outcomes report
(Insights > Reports)

HOW TO INPUT

Step 1: **Review the board.** In Jobber, open the Sales Pipeline: for each open opportunity note the stage, value, days in stage, and client first name.

Step 2: **Check outcomes.** Open the Sales Outcomes report for the last 30 days: what was won, what was lost, and the total values.

Step 3: **Assign next steps** and update each opportunity's stage in Jobber.

PROMPT

You are a sales manager running a weekly pipeline review. Given the open opportunities and last month's outcomes below, write: (1) for each open opportunity — the single next action, who owns it, and by when (call, text, revised quote, site visit); (2) flag any opportunity sitting too long in one stage and say what to do about it (advance it or close it as lost); (3) one lesson from the won/lost report — a pattern worth repeating or avoiding. Keep actions concrete and dated. Open opportunities: [CLIENT FIRST NAME — STAGE — VALUE — DAYS IN STAGE — one per line]. Last 30 days: [WON COUNT + TOTAL, LOST COUNT + TOTAL, ONE-LINE PATTERN YOU NOTICE].

EXPECTED OUTPUT

A next-action list per opportunity, stale-deal flags, and one won/lost lesson.

Step time estimate: 25 minutes per week

The Client Hub Push — Teach Clients to Self-Serve

A prompt that writes the onboarding sequence getting your clients into Jobber's client hub — approve quotes online, pay invoices and deposits, request work, see their history — so the phone stops ringing for things clients can do themselves.

Estimated time-to-run: 30 minutes to set up

20

ChatGPT or Claude, plus the Jobber client hub (quotes, invoices, payments, work requests, job history)

HOW TO INPUT

Step 1: **Confirm what clients can do.** In Jobber, check your client hub settings: online quote approval, online payments and deposits, work request forms, and visible job history.

Step 2: **Replace the placeholders** — your business name and the hub link clients use.

Step 3: **Send the sequence** — email 1 after the first quote, email 2 after the first invoice, and add the hub link to your email signature.

PROMPT

You are an office manager reducing phone tag with a self-service push. Write a two-email onboarding sequence for client hub: EMAIL 1 (after first quote sent) — under 120 words, shows them the one click to review and approve the quote online, mentions they can request changes there too; EMAIL 2 (after first invoice) — under 120 words, shows them how to view and pay the invoice online and where to find their job history. Then write a one-line signature block promoting the hub. Tone: helpful, not techy — many clients are not software people. Business: [BUSINESS NAME]. Client hub link: [URL]. Payment options you accept online: [CARD/ACH].

EXPECTED OUTPUT

Two onboarding emails and a signature line, ready to send and paste.

Step time estimate: 30 minutes to set up
