

The Landscaping Playbook -- Premium Edition

Eighteen workflows from the spring clean-up quote to commercial change-orders, snow + ice ops, and plant health care/IPM -- built for crew leads, shop owners, and multi-route operators.

What's inside

All Starter workflows and prompts

Change-order language for commercial accounts, snow + ice ops, and plant health care/IPM

Crew rollout checklist for 2-20 foremen, spray techs, and irrigation techs

AI-assisted marketing copy templates (Google Business Profile, referral promos, estimate follow-ups)

12 months of free updates — every improvement ships to your inbox

18 workflows · 18 copy-paste AI prompts & scripts · AI stack setup · 12 months of free updates

SkillForge AI — 2026 Edition

AI STACK

Your AI Stack — What to Buy, What to Skip

"AI stack" is just a fancy way of saying "the AI tools you pay for." Yours is short. That's the point.

Buy this: one chatbot subscription

Pick one of these. Either is fine. They both do everything in this book.

- ChatGPT Plus (OpenAI) — around \$20/month at the time of writing; check current pricing.
- Claude Pro (Anthropic) — around \$20/month at the time of writing; check current pricing.

That's it. One subscription, about twenty bucks a month. Everything in this playbook — every prompt, every workflow — runs on it.

Why paid instead of free?

The free versions work, but they cut you off when you use them heavily and they're slower during the day. For a business tool you lean on between jobs, the paid tier is worth it. Twenty dollars is less than the profit on a single clean-up job.

Phone or computer? Both.

Install the app on your phone — that's where you'll use it most, standing on a job site dictating notes. Use the website on your computer for longer writing sessions.

Maybe later: AI phone answering

If missed calls are your biggest leak — and during spring rush they are — an AI receptionist service that answers when you can't is the highest-return upgrade after the chatbot. It answers, takes the details, books the appointment, and texts you a summary.

This book doesn't recommend a specific provider, because the market moves fast and pricing changes. When you're ready, shop for one the way you'd shop for any subcontractor: get three options, ask what happens on a call you can't take at 2 PM on a Tuesday, and make sure you can listen to real sample calls before you commit.

Do not buy this on day one. Get comfortable with the chatbot first. Add phone answering later, once you've felt the savings.

AI STACK

Your AI Stack — What to Buy, What to Skip

Skip all of this

- "AI-powered" routing or CRM software sold to landscapers. Your routing problem is solved with the chatbot and the system you already have. Don't buy new software to fix a workflow problem.
- AI logo makers, AI website builders, AI business-card designers. Vanity purchases. They don't book jobs.
- Multiple chatbot subscriptions. You need one. ChatGPT and Claude is paying twice for the same thing.
- Anything that claims to "engineer retaining walls" or "calculate drainage." Anything structural gets an engineer's stamp, not a prompt.

The stack, summarized

What	Cost	When
One chatbot subscription (ChatGPT Plus or Claude Pro)	~\$20/month	Day one
AI phone answering	Varies — shop around	Later, only if missed calls are your top leak
Everything else	\$0	Skip it

Your total starting cost: about \$20/month. If this book saves you a single hour this month, it has paid for itself several times over.

Set it up once: teach the chatbot your business

Both ChatGPT and Claude let you save "custom instructions" — background info the AI remembers every time. Spend five minutes on this once, and every prompt in this book gets better, because the AI already knows who you are.

Fill this in and paste it into the custom instructions (usually under Settings → Personalization or similar):

I own [YOUR COMPANY NAME], a landscaping business serving [SERVICE AREA]. We do residential and light commercial work: clean-ups, maintenance, hardscaping, and seasonal services. My customers are homeowners and property managers — non-technical. When you write for me: plain language, warm but professional tone, no jargon without explanation. Never invent measurements, prices, or timelines I didn't provide. Keep customer-facing writing short — under the word count I specify.

WORKFLOW 01 OF 18

Spring Clean-Up Renewal -- The Pre-Season Push

A four-touch spring clean-up renewal cadence that lands at pre-season (mid-March through mid-April) before the homeowner schedules with the next-door neighbor.

Estimated time-to-run: 15 minutes to set up; runs against full past-client list

1*ChatGPT or Claude*

HOW TO INPUT

1. Open the prompt 30 days before the spring target date.
2. Paste the past-client list from last spring.
3. Replace the placeholders.
4. Queue the 4 emails as a triggered pre-season push.

PROMPT

You are a landscaper running the spring pre-season renewal push. Below is the past-client list. Generate the 4-touch sequence as a 4-row table (Client | Email Subject | Email Body -- 1-sentence teaser). Each touch: (1) names the prior spring scope from the list detail (leaf removal last spring, hedge reduction last fall, mulch top-dress, etc.); (2) names one early-spring tip the homeowner can act on themselves (a pre-emergent application timing, a bed clear, a gutter pre-check); (3) closes with one yes/no question about whether they want the same crew on the same day-of-week from last year. Tone: warm, plain English, no "spring is here" filler. Past-client list: [PASTE].

EXPECTED OUTPUT

A 4-row pre-season push table with past clients, subjects, and one-ask teasers tied to prior scope.

Step time estimate: 15 minutes

WORKFLOW 02 OF 18

Fall Aeration Renewal -- The Post-Season Pitch

A four-touch fall aeration renewal cadence that lands in September for cool-season lawns and October for warm-season. Output is a 4-row sequence with timing and ask per row.

Estimated time-to-run: 15 minutes to set up; runs once

1*ChatGPT or Claude*

HOW TO INPUT

1. Open the prompt at the start of the fall target window.
2. Paste the past-client list from last fall.
3. Replace the placeholders.
4. Queue the 4 emails as a triggered fall cadence.

PROMPT

You are a landscaper running the fall aeration renewal cadence. Below is the past-client list. Generate the 4-touch sequence as a 4-row table (Client | Email Subject | Email Body -- 1-sentence teaser). Each touch: (1) names the prior fall scope from the list detail (core aeration, overseeding, fall fertilizer); (2) names one fall-specific tip the homeowner can act on (a watering cadence, a leaf-removal timing, a final mow cut height); (3) closes with one yes/no question about whether they want to lock the same window as last year. Tone: direct, plain English, no filler. Past-client list: [PASTE].

EXPECTED OUTPUT

A 4-row fall cadence table with past clients, subjects, and one-ask teasers tied to prior scope.

Step time estimate: 15 minutes

WORKFLOW 03 OF 18

Storm Response Quote -- The Same-Day Build

A one-step prompt that turns a storm (fallen limb, downed fence, debris volume) into a same-day response quote with crew assignment and the one risk the homeowner should know about.

Estimated time-to-run: 10 minutes per quote

1*ChatGPT or Claude*

HOW TO INPUT

1. Open the prompt after the post-storm walk-around.
2. Paste the storm damage (limb count, fence linear feet, debris volume estimate).
3. Replace the placeholders.
4. Send the quote before driving off the property.

PROMPT

You are a landscaper pricing a storm response quote. Below is the damage note. Generate the quote as four blocks: (1) the one-paragraph scope summary the homeowner can sign off on (limb removal, debris haul, fence repair or replacement, the optional stump grind); (2) line-item totals in FIVE buckets (labor, debris haul, fence material, stump grind, dump fee); (3) one block naming the one risk the homeowner should see clearly (a leaning tree, a compromised fence section, an underground utility line near the dig) with one-line justification; (4) timing block -- crew arrives on [START DATE], finishes by [END DATE]. Numbers, no narrative filler. Damage: [PASTE DAMAGE NOTE].

EXPECTED OUTPUT

A 4-block storm-response quote with scope, line items, one named risk, and crew timing.

Step time estimate: 10 minutes

WORKFLOW 04 OF 18

Crew Schedule -- The 5-Day Build

A one-step prompt that turns the upcoming week's job list into a 5-day crew schedule with a lead-crew per day, a backup-crew per day, and the one yard the team should always start at on Monday.

Estimated time-to-run: 20 minutes per week

1*ChatGPT or Claude*

HOW TO INPUT

1. Open the prompt every Friday afternoon.
2. Paste next week's job list (5-15 jobs, each with address and rough scope).
3. Replace the placeholders.
4. Send the schedule to the lead-crew pinning app.

PROMPT

You are a landscaping shop owner building the next week's 5-day crew schedule. Below is the job list. Generate the schedule as a 5-row table (Day | Lead Crew | Jobs | Yard to Start). Each row: (1) assigns one lead crew to the day; (2) lists the day's jobs in route order (mow, edge, blow, leave) -- not by arrival time but by geography; (3) names the one yard the team starts at on Monday (the highest-AOV recurring maintenance client); (4) lists the backup crew in case the lead crew is rained out. No "as needed" placeholders. Job list: [PASTE].

EXPECTED OUTPUT

A 5-row crew schedule table with lead crew, jobs, yard to start, and backup crew -- ready to send to the lead crews.

Step time estimate: 20 minutes

WORKFLOW 05 OF 18

Review Request -- The Post-Job Asker

A two-touch review request that lands 14 days after a completed job. Day 14 text, Day 21 email only if missed.

Estimated time-to-run: 6 minutes per request

1

ChatGPT or Claude

HOW TO INPUT

1. Open the prompt 14 days after the job closed.
2. Paste the crew lead's name and a one-sentence detail from the job.
3. Replace the placeholders.
4. Send the text that morning.

PROMPT

You are a landscaper running the 14-day review ask. Generate a 3-sentence SMS under 160 characters for the homeowner below. Sentence 1: thanks for the visit 14 days ago. Sentence 2: short ask for a 3-line Google review that mentions [CREW LEAD] and the one specific job detail (a hedge reduction, a clean-up after the storm, a fall aeration). Sentence 3: link the Google Business profile short-URL. No exclamation points, no urgency. Homeowner: [HOMEOWNER FIRST NAME]. Crew: [CREW LEAD]. Job: [JOB DETAIL]. Short URL: [GMB SHORT URL].

EXPECTED OUTPUT

A 160-character review-request SMS with one ask and a short URL.

Step time estimate: 3 minutes

WORKFLOW 06 OF 18

Commercial Change-Order -- The Mid-Job Written Add

A one-step prompt that turns an in-scope discovery (a buried stump, a drainage line, an extra bed) into a written change-order the commercial account manager can sign on-site, with the original contract reference and the new line-item total.

Estimated time-to-run: 12 minutes per change-order

1

ChatGPT or Claude

HOW TO INPUT

1. Open the prompt the moment the crew lead flags an out-of-scope item.
2. Paste the original contract scope line, the discovered item, and the crew time + material delta.
3. Replace the placeholders.
4. Hand the commercial account manager the printed change-order before the crew leaves the site.

PROMPT

You are a landscaping shop owner writing a commercial change-order. Below is the original contract scope line, the discovered out-of-scope item, and the crew + material delta. Generate the change-order as four blocks: (1) a one-paragraph scope amendment that references the original contract section by number and names the discovered item; (2) a 3-row line-item table (Labor, Material, Dump/Disposal) with hours, rate, and dollar total per row; (3) a one-sentence schedule-impact line ("adds N working days to the original end date of [END DATE]"); (4) a signature block the commercial account manager signs on-site (Name, Title, Date). Plain English, no filler. Original scope: [PASTE]. Discovered item: [PASTE]. Delta: [PASTE].

EXPECTED OUTPUT

A 4-block commercial change-order with scope amendment, line items, schedule impact, and signature block.

Step time estimate: 12 minutes

WORKFLOW 07 OF 18

Snow + Ice Ops -- The Pre-Storm Salt + Plow Plan

A one-step prompt that turns a 5-day weather forecast into a pre-storm salt + plow plan: per-lot trigger temperature, salt tonnage per lot, plow-crew assignment, and the callback list for commercial accounts who need a 4am confirmation.

Estimated time-to-run: 20 minutes per storm

1

ChatGPT or Claude

HOW TO INPUT

1. Open the prompt 48 hours before the forecast storm window.
2. Paste the 5-day forecast, the active commercial snow list, and the salt inventory on hand.
3. Replace the placeholders.
4. Send the plan to the plow-crew pinning app + email the commercial callback list.

PROMPT

You are a landscaping shop owner running pre-storm snow + ice ops. Below is the 5-day forecast, the active commercial snow list, and the salt inventory on hand. Generate the pre-storm plan as a 4-row table (Lot | Trigger Temp | Salt Tonnage | Plow Crew). Each row: (1) names the lot from the commercial list; (2) sets the trigger temperature for pre-treat (28F for high-traffic, 25F for residential-style); (3) estimates the salt tonnage per 1000 sq ft at the forecast depth (0.5 ton per acre per inch of forecast accumulation); (4) assigns one plow crew by neighborhood cluster, not by lot order. After the table, one block: the 4am callback list (commercial accounts who need a phone confirmation before the crew rolls). Forecast: [PASTE]. Commercial snow list: [PASTE]. Salt on hand: [PASTE] tons.

EXPECTED OUTPUT

A 4-row pre-storm salt + plow table plus a 4am callback list.

Step time estimate: 20 minutes

WORKFLOW 08 OF 18

Plant Health Care/IPM -- The 4-Visit Seasonal Cadence

A one-step prompt that builds a 4-visit IPM cadence for a residential or commercial account from the property's tree + shrub inventory: spring dormant oil, summer insecticide, fall fertilizer, winter pruning -- each visit with a target window, product, and a one-line client note.

Estimated time-to-run: 15 minutes per account

1

ChatGPT or Claude

HOW TO INPUT

1. Open the prompt after the spring walk-through.
2. Paste the property tree + shrub inventory (species, count, approximate age).
3. Replace the placeholders.
4. Queue the 4 visits in the CRM as a triggered seasonal cadence.

PROMPT

You are a landscaper building a 4-visit plant health care/IPM cadence. Below is the property tree + shrub inventory. Generate the cadence as a 4-row table (Visit | Target Window | Product + Rate | Client Note). Cover, in order: (1) Spring dormant oil at bud break (target window: late March to mid-April, product: horticultural dormant oil at label rate, note: suffocates overwintering scale + mite eggs); (2) Summer insecticide at peak pest pressure (target window: mid-June to mid-July, product: labeled systemic or contact insecticide, note: target the specific pest from the inventory); (3) Fall fertilizer at root-growth window (target window: late September to mid-October, product: slow-release NPK at 1 lb N per 1000 sq ft, note: feeds root reserve before dormancy); (4) Winter pruning in dormancy (target window: December to February, product: sanitation prune + dormant fungicide, note: removes overwintering cankers). One-line client note per row, plain English. Inventory: [PASTE].

EXPECTED OUTPUT

A 4-row IPM cadence with target windows, products, and client-facing notes.

Step time estimate: 15 minutes

WORKFLOW 09 OF 18

Hardscape Design-Build -- The Multi-Material Estimate

A one-step prompt that turns a 30-minute hardscape walkthrough (patio, walkway, retaining wall) into a multi-material estimate with three build tiers (basic / mid / premium), per-tier line items, and the one tier the crew should recommend.

Estimated time-to-run: 25 minutes per estimate

1

ChatGPT or Claude

HOW TO INPUT

1. Open the prompt after the hardscape walkthrough.
2. Paste the square footage, the material options discussed, the site grade, and the access notes.
3. Replace the placeholders.
4. Send the estimate to the homeowner same-day.

PROMPT

You are a landscaper pricing a hardscape design-build estimate. Below is the walk-through. Generate the estimate as three tiered blocks (Basic / Mid / Premium). Each tier: (1) the one-line material palette (e.g. "basic = concrete paver, mid = natural bluestone, premium = wet-laid natural stone"); (2) a 4-row line-item table (Material, Labor, Base/Prep, Disposal) with dollar totals; (3) the one-line durability note ("20-year residential" vs "lifetime"); (4) the 7-day schedule block (crew size, days on site, weather buffer). After the three tiers, one block: which tier the crew should recommend given the site grade + access notes, with a one-line justification. Plain English, numbers only. Walk: [PASTE].

EXPECTED OUTPUT

A 3-tier hardscape estimate with line items, durability, schedule, and a recommended tier.

Step time estimate: 25 minutes

WORKFLOW 10 OF 18

Crew Rollout Checklist -- The 2-20 Foreman Onboarding

A one-step prompt that builds a 2-week onboarding checklist for a new foreman, spray tech, or irrigation tech: week-1 shadow days, week-2 lead-under-supervision days, the 5 site-side decisions they own, and the 3 they escalate.

Estimated time-to-run: 15 minutes per new hire

1

ChatGPT or Claude

HOW TO INPUT

1. Open the prompt the day the new hire signs on.
2. Paste the new hire role, the crew they are joining, and the first client site they will visit.
3. Replace the placeholders.
4. Print the checklist and pin it to the truck cab for the first 2 weeks.

PROMPT

You are a landscaping shop owner building a 2-week onboarding checklist for a new crew member. Below is the role, the crew, and the first client site. Generate the checklist as a 14-row table (Day | Activity | Supervisor | Sign-Off). Week 1 is shadow days: ride-along, tool + safety intro, property walk with the supervisor, watch the scope the crew is running that day. Week 2 is lead-under-supervision days: the new hire runs the day's scope with the supervisor on site as backup, with a daily debrief at the end. After the table, one block: the 5 site-side decisions the new hire owns (scope-confirm, crew-break timing, materials-on-truck check, client handoff, day-end photo) and the 3 they escalate (price change, change-order scope, weather cancellation). Plain English. Role: [PASTE]. Crew: [PASTE]. First site: [PASTE].

EXPECTED OUTPUT

A 14-row onboarding checklist with daily activities, plus the 5 owned vs 3 escalated decisions.

Step time estimate: 15 minutes

WORKFLOW 11 OF 18

GBP Post -- The Weekly Service-Area Highlight

A one-step prompt that turns the past week's completed jobs into a Google Business Profile weekly post: a 1-sentence hook, a 3-bullet "what we shipped this week" block, and a single call-to-action line that points at the estimate form.

Estimated time-to-run: 8 minutes per week

1

ChatGPT or Claude

HOW TO INPUT

1. Open the prompt every Friday at 4pm.
2. Paste the week's completed jobs (5-10 lines, each with address neighborhood + scope one-liner).
3. Replace the placeholders.
4. Schedule the GBP post for Monday morning.

PROMPT

You are a landscaper writing the weekly Google Business Profile post. Below is the week's completed jobs. Generate the post as three blocks: (1) a one-sentence hook that names the service area (the neighborhood cluster the jobs cluster in); (2) a 3-bullet "what we shipped this week" block, each bullet a one-line job summary (no addresses, no client names, just scope + neighborhood); (3) a single call-to-action line that points at the estimate form on the website. Tone: plain English, warm, no exclamation points, no "spring is here" filler. Under 320 characters total so it fits the GBP post limit. Jobs: [PASTE].

EXPECTED OUTPUT

A 3-block GBP weekly post under 320 characters with a hook, bullets, and a CTA.

Step time estimate: 8 minutes

**WORKFLOW 12 OF 18**

Referral Promo -- The Neighbor Incentive Mailer

A one-step prompt that turns a completed job into a neighbor referral mailer: a 4-line letter the crew leaves on the 5 closest doors, naming the work just completed on the block, the neighbor-specific discount, and the 14-day window.

Estimated time-to-run: 10 minutes per completed job

1*ChatGPT or Claude***HOW TO INPUT**

1. Open the prompt the day a job in a residential neighborhood wraps.
2. Paste the completed job scope, the street name, and the neighbor discount you are offering.
3. Replace the placeholders.
4. Print 5 copies and leave them on the 5 closest doors on the way out.

PROMPT

You are a landscaper writing a neighbor referral mailer. Below is the completed job scope, the street name, and the neighbor discount. Generate the mailer as a 4-line letter: (1) the opener -- "We just wrapped [SCOPE ONE-LINER] on [STREET NAME] this week"; (2) the offer -- "If you live on this block and want the same crew, we can knock [DISCOUNT] off your first visit because we are already on the street"; (3) the 14-day window -- "This is good through [DATE 14 days out] -- after that we go back to the regular estimate"; (4) the close -- "Call or text us at [PHONE] -- we can quote from the sidewalk in 15 minutes." Tone: warm, plain English, no exclamation points. Scope: [PASTE]. Street: [PASTE]. Discount: [PASTE].

EXPECTED OUTPUT

A 4-line neighbor referral mailer ready to print and leave on 5 doors.

Step time estimate: 10 minutes

WORKFLOW 13 OF 18

Estimate Follow-Up -- The Silent Stage Recovery

A four-touch estimate follow-up cadence that recovers estimates gone silent at the 7-day mark. Day 7 text, Day 12 email, Day 18 handwritten postcard prompt, Day 30 close. Each touch names the original scope + the one open question.

Estimated time-to-run: 15 minutes to set up; runs per estimate

1

ChatGPT or Claude

HOW TO INPUT

1. Open the prompt 7 days after the estimate was sent with no response.
2. Paste the original estimate scope, the dollar total, and the open question (e.g. "preferred start date").
3. Replace the placeholders.
4. Queue the 4 touches in the CRM as a triggered silent-stage sequence.

PROMPT

You are a landscaper running the silent-stage estimate recovery. Below is the original estimate. Generate the 4-touch sequence as a 4-row table (Day | Channel | Message | Single Ask). Cover, in order: (1) Day 7 -- SMS under 160 characters that names the estimate total + the one open question; (2) Day 12 -- email under 200 words that opens by naming the original scope, lists the 3 things the crew would do first on site, and closes with the same open question; (3) Day 18 -- a handwritten postcard prompt (one sentence, under 30 words, the postcard itself is 4x6); (4) Day 30 -- close email, one short paragraph that names the estimate, the per-visit cost, and a single yes/no question about whether they want the crew on the schedule next month. Tone: warm, plain English, no urgency. Estimate: [PASTE]. Open question: [PASTE].

EXPECTED OUTPUT

A 4-row silent-stage recovery table with day, channel, message, and one ask per row.

Step time estimate: 15 minutes

WORKFLOW 14 OF 18

Irrigation Spring Start-Up -- The 8-Zone Audit

A one-step prompt that turns a residential irrigation spring start-up walk into an 8-zone audit: per-zone pressure check, head adjustment, leak flag, and the one upgrade the homeowner should consider this season.

Estimated time-to-run: 20 minutes per system

1*ChatGPT or Claude*

HOW TO INPUT

1. Open the prompt at the controller on the first spring start-up visit.
2. Paste the zone count, the controller model, and the per-zone observations (pressure, head type, leaks).
3. Replace the placeholders.
4. Hand the homeowner the audit sheet before leaving the property.

PROMPT

You are a landscaper running an irrigation spring start-up audit. Below is the system walk. Generate the audit as an 8-row table (Zone | Pressure | Head Adjustment | Leak Flag). Each row: (1) names the zone number + the zone purpose (e.g. "Zone 1 -- front lawn"); (2) reads the pressure at the furthest head (PSI); (3) names the adjustment needed (arc, radius, head swap); (4) flags any leak (Y/N + location). After the table, one block: the one upgrade the homeowner should consider this season (a rain sensor, a smart controller, a head-to-spray conversion, etc.) with a one-line justification and a specific dollar range. Plain English. Walk: [PASTE].

EXPECTED OUTPUT

An 8-row irrigation audit table plus a one-upgrade recommendation with a dollar range.

Step time estimate: 20 minutes

WORKFLOW 15 OF 18

Bed Mulch Top-Dress -- The Yardage Calculator

A one-step prompt that calculates the mulch yardage for a property from the bed square footage + the target depth, with the bag-vs-bulk cost crossover and the one-line delivery recommendation.

Estimated time-to-run: 6 minutes per property

1*ChatGPT or Claude*

HOW TO INPUT

1. Open the prompt at the property walk.
2. Paste the bed square footage, the target mulch depth (2 or 3 inches), and the bulk + bag prices from your supplier.
3. Replace the placeholders.
4. Add the line item to the clean-up quote on the iPad.

PROMPT

You are a landscaper pricing a mulch top-dress. Below is the bed square footage, the target depth, and the supplier pricing. Generate the calculation as four blocks: (1) the cubic-footage needed (bed sq ft x depth in feet); (2) the bulk yardage (cubic ft / 27) rounded up to the nearest half yard; (3) the bag count (cubic ft / bag cubic ft) rounded up; (4) the cost crossover -- bulk dollar total, bag dollar total, and the one-line recommendation ("bulk below 4 yards, bag above" or vice versa). Plain English, numbers only. Bed sq ft: [PASTE]. Depth: [PASTE]. Bulk price: [PASTE] per yard. Bag price: [PASTE] per bag at [PASTE] cu ft.

EXPECTED OUTPUT

A 4-block mulch yardage calculation with the bag-vs-bulk crossover and a delivery recommendation.

Step time estimate: 6 minutes

WORKFLOW 16 OF 18

Sod Install -- The Prep + Lay Schedule

A one-step prompt that turns a sod-install scope into a 3-day prep + lay schedule: day-1 prep (kill + grade), day-2 delivery + lay, day-3 water + walkthrough -- with crew size, material yardage, and the 2-week watering cadence the homeowner must follow.

Estimated time-to-run: 15 minutes per install

1*ChatGPT or Claude*

HOW TO INPUT

1. Open the prompt at the property walk.
2. Paste the lawn square footage, the existing cover, the grade notes, and the sod variety chosen.
3. Replace the placeholders.
4. Print the schedule + watering cadence for the homeowner.

PROMPT

You are a landscaper pricing a sod install. Below is the scope. Generate the schedule as a 3-row table (Day | Activity | Crew). Day 1: prep (kill existing cover if needed, grade, soil amendment, hand-rake). Day 2: delivery + lay (crew size, pallets, stagger the seams, roll the lawn). Day 3: water + walkthrough (first watering, homeowner walk, the one thing they should watch for in week 1). After the table, one block: the 2-week watering cadence the homeowner must follow (twice daily for week 1 at 20 min per zone, once daily for week 2 at 30 min per zone, then back to the normal irrigation schedule). Plain English. Scope: [PASTE].

EXPECTED OUTPUT

A 3-day sod install schedule plus a 2-week homeowner watering cadence.

Step time estimate: 15 minutes

WORKFLOW 17 OF 18

Hedge Reduction Cut -- The Multi-Year Plan

A one-step prompt that turns an overgrown hedge into a 3-year reduction plan: year-1 reduction cut, year-2 shape, year-3 maintain -- with the one rule the homeowner must accept (the year-1 cut looks aggressive) and the per-year dollar figure.

Estimated time-to-run: 10 minutes per hedge

1*ChatGPT or Claude*

HOW TO INPUT

1. Open the prompt at the hedge walk.
2. Paste the hedge species, the current height + width, the target height + width, and the client tolerance for an aggressive cut.
3. Replace the placeholders.
4. Send the 3-year plan to the homeowner with the quote.

PROMPT

You are a landscaper pricing a hedge reduction cut. Below is the hedge. Generate the plan as a 3-row table (Year | Cut | Dollar Total). Year 1: the reduction cut -- cut back to the target height + width, accept the bare-wood look, feed with slow-release fertilizer. Year 2: the shape cut -- tighten the form, remove the cross branches, light feed. Year 3: the maintain cut -- back to the standard 6-week cadence. After the table, one block: the one rule the homeowner must accept -- the year-1 cut looks aggressive for one growing season, the hedge fills back in by mid-summer. Plain English. Hedge: [PASTE].

EXPECTED OUTPUT

A 3-year hedge reduction plan with per-year cuts, dollar totals, and the year-1 rule.

Step time estimate: 10 minutes

WORKFLOW 18 OF 18

Crew Daily Log -- The End-of-Day Report

A one-step prompt that turns the crew lead's end-of-day notes into a written daily log: jobs completed, materials used, the one thing that ran long, and the one thing tomorrow's crew should know.

Estimated time-to-run: 5 minutes per day

1*ChatGPT or Claude*

HOW TO INPUT

1. Open the prompt at 5pm in the truck cab.
2. Paste the crew lead's scratch notes from the day (5-10 lines, each job + scope + crew time).
3. Replace the placeholders.
4. Send the log to the shop owner + pin it to the job folder.

PROMPT

You are a landscaping crew lead writing the end-of-day log. Below is the day's scratch notes. Generate the log as four blocks: (1) a 3-row table of jobs completed (Job | Crew Time | Material Used); (2) a one-paragraph "what ran long today" block that names the single job that broke schedule + why; (3) a one-paragraph "what tomorrow's crew should know" block -- the one open item, the one tool to grab from the shop, the one client to call before 8am; (4) a one-line equipment note (anything that needs repair). Tone: plain English, no filler. Notes: [PASTE].

EXPECTED OUTPUT

A 4-block end-of-day crew log with jobs, schedule overrun, tomorrow's heads-up, and equipment note.

Step time estimate: 5 minutes
