

The ServiceTitan Integration Playbook

Twenty AI workflows for home-service contractors running ServiceTitan — built for owners, office managers, dispatchers, and techs.

What's inside

Good-Better-Best proposals and unsold-estimate rescue workflows from your real pricebook

Dispatch-board, emergency-triage, and same-day-fill workflows from your live schedule

Membership sales, recurring-service roundups, and renewal campaigns

Review generation, collections, financing, and on-site payment workflows

Scorecards, dashboards, and marketing-ROI workflows that turn ServiceTitan data into decisions

12 months of free updates — every improvement ships to your inbox

WORKFLOW 01 OF 20

The Good-Better-Best Builder — Options That Sell Themselves

A prompt that turns a tech's diagnosis notes and pricebook items into a clean three-option proposal: fix what's broken, fix it plus prevent the next failure, or replace and upgrade — each with plain-language benefit lines, so the customer picks instead of being pitched.

Estimated time-to-run: 10 minutes per proposal

01

ChatGPT or Claude, plus ServiceTitan Mobile estimates and proposals

HOW TO INPUT

Step 1: **Build the estimate from the pricebook** in ServiceTitan Mobile — add the diagnosed repair items, the preventive add-ons, and the replacement option as three separate options, with photos of the problem attached.

Step 2: **Copy the diagnosis notes and the three option lists, and replace the placeholders** — equipment type and age, what failed, and the pricebook item names and prices for each tier.

Step 3: **Present on the tablet** and let the customer tap to accept — no paper, no retyping back at the office.

PROMPT

You are an HVAC/plumbing/electrical service writer. Below are a tech's diagnosis notes and three pricebook option lists. Write the customer-facing proposal copy as three tiers: (1) Good — fix what's broken now, 3 benefit bullets in plain words a homeowner understands; (2) Better — the fix plus the preventive items that stop the next breakdown, 3 benefit bullets; (3) Best — full replacement/upgrade, 3 benefit bullets including warranty and efficiency. Each tier gets a one-line headline, the price, and a "best for you if..." line. No jargon, no scare tactics, no fake urgency. If financing is available, add one line per tier with the estimated monthly payment. Diagnosis: [PASTE DIAGNOSIS NOTES]. Good items: [PASTE]. Better items: [PASTE]. Best items: [PASTE]. Prices: [PASTE].

EXPECTED OUTPUT

Three-tier proposal copy — headline, benefits, price, and "best for you if" line per tier — ready to paste into the ServiceTitan proposal.

Step time estimate: 10 minutes

WORKFLOW 02 OF 20

The Unsold Estimate Rescue — The 14-Day Win-Back

A prompt that turns your outstanding-estimates list into a three-touch follow-up sequence — text, email, then a call script — timed across 14 days, so quotes that went quiet get a real second chance instead of dying in the system.

Estimated time-to-run: 20 minutes per batch

02

ChatGPT or Claude, plus ServiceTitan estimate follow-up tracking

HOW TO INPUT

Step 1: **Pull the outstanding estimates** from ServiceTitan — customer name, estimate total, what was quoted, how many days since it was presented, and any notes on why they hesitated.

Step 2: **Copy the list and replace the placeholders** — use first names only, never paste full addresses, phone numbers, or payment details into the AI.

Step 3: **Run the sequence** — send touch one, schedule touch two, and hand the call scripts to whoever works the phones.

PROMPT

You are a home-service office manager following up on unsold estimates. For each estimate below, write a 3-touch sequence: (1) a text under 40 words – reference the specific equipment and the quote date, one helpful nudge, one yes/no question, no exclamation points; (2) an email under 120 words – restate the problem found, the recommended fix, and one reason not to wait (safety, efficiency, or season), signed by the company; (3) a 5-line call script – opener referencing the estimate, one question about what held them back, the financing one-liner if the total is over [FINANCING THRESHOLD], and a specific booking ask with two day-options. Tone: helpful, never pushy, never mention "quota" or "commission." Estimates: [PASTE ESTIMATE LIST WITH TOTALS AND DAYS SINCE PRESENTED].

EXPECTED OUTPUT

A 3-touch follow-up sequence per estimate — text, email, and call script — ordered oldest-first.

Step time estimate: 20 minutes per batch

WORKFLOW 03 OF 20

The Morning Dispatch Huddle — Board Set in 20 Minutes

A prompt that turns your unassigned jobs, tech roster, and capacity plan into an optimized dispatch board: which tech gets which job, which jobs need rescheduling, and where the day has slack for same-day calls.

Estimated time-to-run: 20 minutes each morning

03

ChatGPT or Claude, plus the ServiceTitan dispatch board

HOW TO INPUT

Step 1: **Open the dispatch board** — note the unassigned jobs, the unconfirmed jobs, each tech's skill set and service zone, and today's capacity targets.

Step 2: **Copy the board snapshot and replace the placeholders** — job type, priority, location area, and required skill per unassigned job; each tech's first job location and skills.

Step 3: **Work the board** — drag and drop to assign, right-click to confirm or reschedule, and watch the activity feed as techs acknowledge.

PROMPT

You are a dispatcher setting the day's board for a home-service company. Below is this morning's dispatch snapshot. Produce an assignment plan: for each unassigned job, name the best-fit tech and one sentence why (skill match, zone proximity, or capacity). Flag any job that should be rescheduled rather than forced in, and name the two best windows today to hold open for same-day emergency calls. Rules: match required skill to tech skill set first, zone proximity second; never stack a tech past their capacity target; membership tune-ups are low priority and get bumped first. Board snapshot: [PASTE UNASSIGNED JOBS WITH TYPE, PRIORITY, ZONE, REQUIRED SKILL]. Techs: [PASTE TECH ROSTER WITH SKILLS, ZONES, FIRST-JOB LOCATION]. Capacity targets: [PASTE].

EXPECTED OUTPUT

A tech-by-tech assignment plan with fit reasons, reschedule flags, and two protected same-day windows.

Step time estimate: 20 minutes

WORKFLOW 04 OF 20

The Emergency Triage Sprint — Right Tech, Right Job, Right Now

A prompt that takes an incoming emergency call and ranks your techs in under two minutes: who is closest, who has the skill, and who can break free — so the dispatcher answers with a name and an ETA, not a callback.

Estimated time-to-run: 2 minutes per emergency call

04

ChatGPT or Claude, plus the ServiceTitan dispatch board (GPS tracking, activity feed)

HOW TO INPUT

Step 1: **Take the call details** — problem type, address area, and how urgent it is (no heat, water leak, sparking panel, or can-it-wait).

Step 2: **Glance at the board** — each tech's live GPS location, current job status (working, paused, done), and skill set.

Step 3: **Dispatch the winner** — drag the job over, and text the customer the tech's name and ETA.

PROMPT

You are a dispatcher handling an emergency service call. Rank the available techs for this job. Score each tech 1-5 on: (1) skill match for this problem type, (2) GPS proximity to the job, (3) how fast they can break free (working = slow, paused/wrapping = fast, done = immediate). Name the top pick with an ETA estimate and one backup pick. If no tech scores above 10 total, say so plainly and recommend the honest customer message: what you'll do instead and when. Emergency: [PROBLEM TYPE, AREA, URGENCY]. Techs: [PASTE TECH NAME, SKILL SET, CURRENT STATUS, GPS AREA].

EXPECTED OUTPUT

A ranked tech list with scores, a top pick + backup, and an honest fallback message if nobody fits.

Step time estimate: 2 minutes per call

**WORKFLOW 05 OF 20**

The Cancellation Fill — Holes Filled Same-Day

A prompt that turns a same-day cancellation into a filled slot: it matches the open window against unconfirmed jobs, the waitlist, and nearby scheduled work that could move up — ranked by revenue and fit.

Estimated time-to-run: 10 minutes per cancellation

05**ChatGPT or Claude, plus the ServiceTitan dispatch board****HOW TO INPUT**

Step 1: **Note the hole** — cancelled job's time window, tech, service zone, and what type of work fits the slot.

Step 2: **Pull the candidates** — unconfirmed jobs for today, any customer waitlist, and nearby jobs later this week that could be pulled forward.

Step 3: **Call down the ranked list** — top candidate first, and confirm straight onto the board.

PROMPT

You are a dispatcher filling a same-day cancellation. Rank the candidate jobs to fill this slot. Rank by: (1) jobs already unconfirmed today that fit the window and zone, (2) waitlisted customers in the same zone, (3) scheduled jobs later this week in the same zone that could move up. For each candidate write a 2-line call opener: name the opening (day + time + tech) and one reason it's good for them. Never double-book, never move a job without asking the customer first. Open slot: [DATE, TIME WINDOW, TECH, ZONE, JOB TYPES THAT FIT]. Candidates: [PASTE UNCONFIRMED / WAITLIST / MOVE-UP CANDIDATES].

EXPECTED OUTPUT

A ranked fill list with a call opener per candidate, top pick first.

Step time estimate: 10 minutes per cancellation

**WORKFLOW 06 OF 20**

The CSR Booking-Rate Coach — Calls That Book

A prompt that turns call recordings and the booking-rate report into per-CSR coaching notes: what the best calls do differently, the exact script fixes for missed bookings, and two recorded calls to review together this week.

Estimated time-to-run: 30 minutes per coaching session

06**ChatGPT or Claude, plus ServiceTitan call recordings and booking-rate reporting****HOW TO INPUT**

Step 1: **Pull the numbers** — each CSR's call booking rate for the week, number of calls handled, and how many went unbooked with the reason logged.

Step 2: **Listen to two calls per CSR** — one that booked and one that didn't — and note the timestamps where the call turned.

Step 3: **Sit down with the notes** — lead with what they did right, then the one fix that moves the needle.

PROMPT

You are a call-center coach for a home-service company. Below are this week's CSR booking stats and my notes from listening to two calls per CSR (one booked, one missed). For each CSR write a coaching brief: (1) one specific thing they did well on the booked call, quoted; (2) the exact moment the missed call went wrong and the one-line script fix for next time; (3) their single focus for next week. Then write a 6-line universal booking script the whole team can use: greeting with name, two diagnostic questions from the drop-downs, the arrival-window offer, and the confirm-and-lock close. Tone: coaching, never punitive. Stats: [PASTE CSR BOOKING RATES AND UNBOOKED REASONS]. Call notes: [PASTE NOTES WITH TIMESTAMPS].

EXPECTED OUTPUT

A per-CSR coaching brief plus one universal 6-line booking script for the team.

Step time estimate: 30 minutes per session

WORKFLOW 07 OF 20

The Unbooked-Call Win-Back — Second Chances

A prompt that turns yesterday's unbooked calls into a callback list with scripts — because a caller who didn't book is still a lead, and most of them just need one more touch.

Estimated time-to-run: 15 minutes per callback block

07**ChatGPT or Claude, plus ServiceTitan call history and booking screen**

HOW TO INPUT

Step 1: **Pull yesterday's unbooked calls** — caller name, reason logged for not booking (price shopping, timing, no availability, just a question), and any property data on screen.

Step 2: **Copy the list and replace the placeholders** — first names only, no full addresses or phone numbers in the AI.

Step 3: **Make the callbacks in one block** and log the outcome against the original call record.

PROMPT

You are a CSR working unbooked-call callbacks. For each caller below, write a 4-line callback script: (1) opener — name them, reference yesterday's call and the specific thing they asked about; (2) the reason-handler — one sentence that answers their logged objection (price → financing and options; timing → two specific windows this week; availability → the soonest opening); (3) the property-data hook — one relevant observation from their property data (equipment age, home size) that shows we did homework; (4) the close — one yes/no booking question. Never guilt-trip, never say "just following up." Callers: [PASTE UNBOOKED CALLS WITH REASONS AND PROPERTY NOTES].

EXPECTED OUTPUT

A callback script per unbooked caller with opener, reason-handler, property hook, and close.

Step time estimate: 15 minutes per block

**WORKFLOW 08 OF 20**

The Membership Pitch — Sold in the Driveway

A prompt that turns the equipment a tech just serviced into a membership offer script — priced from the pricebook sales task, personalized to the system's age — so the pitch happens while the trust is fresh, not in a letter three months later.

Estimated time-to-run: 5 minutes per pitch, at the job

08**ChatGPT or Claude, plus ServiceTitan Mobile (pricebook membership sales tasks)****HOW TO INPUT**

Step 1: **Note the setup** — equipment type and age, what was serviced today, and the membership type and price from the pricebook sales task.

Step 2: **Replace the placeholders** — first name only, equipment age, today's service, membership price and what's included.

Step 3: **Make the offer before you pack up** — present it on the tablet like any other option.

PROMPT

You are a field technician offering a maintenance membership at the end of a service visit. Write a 60-second pitch script: (1) the bridge — connect today's service to the equipment's age in one sentence; (2) the offer — name the membership, the price, and the two included tune-ups in plain words; (3) the math — one line on what two à la carte tune-ups would cost versus the membership; (4) the ask — one yes/no question. Then add two objection handlers, one line each: "I just paid for this visit" and "I'll think about it." Rules: plain words, no jargon, never pressure; if they decline, thank them and move on. Setup: [EQUIPMENT TYPE AND AGE, TODAY'S SERVICE, MEMBERSHIP NAME, PRICE, INCLUDED SERVICES, A LA CARTE TUNE-UP PRICE].

EXPECTED OUTPUT

A 60-second membership pitch script plus two one-line objection handlers.

Step time estimate: 5 minutes per pitch

**WORKFLOW 09 OF 20**

The Recurring Service Roundup — Tune-Ups That Book Themselves

A prompt that turns the membership follow-up screen into a bulk-text campaign: every member due for their seasonal tune-up gets a personal-feeling message with a reply-to-book path, and the office just works the replies.

Estimated time-to-run: 30 minutes per campaign

09

ChatGPT or Claude, plus ServiceTitan membership follow-up and bulk texting

HOW TO INPUT

Step 1: **Open the membership follow-up screen** — set the date range for the season, and see who's due for recurring service and how many times they've been contacted.

Step 2: **Copy the due list and replace the placeholders** — first names only, membership type, and which tune-up is due (spring AC, fall furnace).

Step 3: **Send the bulk texts** and book straight from the replies; bulk-dismiss anyone whose season has passed.

PROMPT

You are an office manager booking seasonal tune-ups for maintenance members. Write three short texts (under 40 words each): (1) the due reminder – name them, name the tune-up that's due, one benefit line (catch small problems before peak season), and a reply-to-book ask; (2) the second nudge for non-responders – slightly more direct, mention the season window closing; (3) the last-call text – honest scarcity, the final week before the season turns. No exclamation points, no fake deadlines – only use real season dates. Season: [SPRING AC / FALL FURNACE + REAL DATE WINDOW]. Members due: [PASTE FIRST NAMES + MEMBERSHIP TYPES].

EXPECTED OUTPUT

Three tune-up texts (reminder, nudge, last call) ready to bulk-send from the follow-up screen.

Step time estimate: 30 minutes per campaign

WORKFLOW 10 OF 20

The Expiring Membership Save — Renew Before They Lapse

A prompt that builds a renewal campaign from your expiring memberships: an audience in Marketing Pro, a 3-message email-and-text sequence, and a call list for the high-value members worth a personal touch.

Estimated time-to-run: 45 minutes per campaign

10

ChatGPT or Claude, plus ServiceTitan Marketing Pro (audience builder) and membership renewal tasks

HOW TO INPUT

Step 1: **Build the audience** in Marketing Pro's audience builder — memberships expiring in the next 60 days, segmented by membership type and annual value.

Step 2: **Copy the segment counts and replace the placeholders** — first names for the call list only, never full contact details in the AI.

Step 3: **Launch the sequence** and track renewals against the renewal tasks in ServiceTitan.

PROMPT

You are a marketing manager saving expiring maintenance memberships. Build the renewal campaign: (1) audience definition — write the audience-builder criteria in plain words (membership type, expires within 60 days, exclude already-renewed); (2) a 3-message sequence — email one (the reminder: what their membership covered this year, one specific visit to reference), text two (the easy path: reply YES to renew), email three (the last chance: honest expiry date, what lapses); (3) a call script for top-value members — 4 lines, reference their equipment and their tech by name. All messages under 120 words, plain English, real dates only. Segments: [PASTE MEMBERSHIP TYPES + COUNTS + EXPIRY WINDOW]. Top members for calls: [FIRST NAMES + EQUIPMENT + TECH NAME].

EXPECTED OUTPUT

Audience criteria, a 3-message renewal sequence, and a call script for high-value members.

Step time estimate: 45 minutes per campaign

WORKFLOW 11 OF 20

The Review Engine — 5 Stars on Autopilot

A prompt that sets up the full review loop: the tech's 20-second verbal ask at the door, the automated text that lands after the job, and the internal alert script for unhappy responses — so reviews grow without anyone having to remember.

Estimated time-to-run: 30 minutes to set up, then automatic

11

ChatGPT or Claude, plus ServiceTitan Marketing Pro Reputation (automated review requests)

HOW TO INPUT

Step 1: **Confirm the automation** — review requests set to send by text after the tech marks the job complete in the mobile app.

Step 2: **Replace the placeholders** — your review-link destinations, the tech-intro line CSRs use at booking, and who gets the internal alert on a negative response.

Step 3: **Train the verbal ask** — every tech says the 20-second version at the door, every time.

PROMPT

You are a reputation manager for a home-service company. Write the complete review loop: (1) the CSR set-up line at booking – one sentence that tells the customer a quick survey text is coming after the visit; (2) the tech's 20-second door ask – thank them, name one specific thing done today, ask them to watch for the text; (3) the automated text – under 40 words, thank them, link to review, one yes/no-flavored nudge; (4) the internal alert script – for customers who answer the survey negatively, write the exact internal note the office gets (customer first name, what to do within 24 hours, who owns it). Rules: never offer incentives for reviews, never script fake reviews, keep every word honest. Destinations: [REVIEW LINKS]. Alert owner: [NAME/ROLE].

EXPECTED OUTPUT

A four-part review loop — CSR line, tech ask, automated text, and negative-response alert script.

Step time estimate: 30 minutes to set up

**WORKFLOW 12 OF 20**

The AR Chase — Get Paid Without the Awkward Call

A prompt that turns the Accounts Receivable Summary Report into an aging-bucket outreach plan: friendly nudge for 30-day balances, firmer sequence for 60, and the call script for 90+ — each matched to the balance and the job.

Estimated time-to-run: 30 minutes per AR review

12 ChatGPT or Claude, plus the ServiceTitan Accounts Receivable Summary Report

HOW TO INPUT

Step 1: **Pull the AR Summary Report** — customer names, outstanding balances, and aging buckets (under 30, 31–60, 61–90, 90+ days).

Step 2: **Copy the buckets and replace the placeholders** — first names and balances only, never full account numbers or payment details in the AI.

Step 3: **Work the plan oldest-first** — texts and emails for the young balances, calls for the old ones.

PROMPT

You are an office manager collecting overdue invoice balances. For each aging bucket write the outreach: (1) under 30 days – one friendly text under 40 words, assume they forgot, include the balance and the portal payment link; (2) 31–60 days – a 3-touch sequence (text, email, text) slightly firmer, reference the original service date; (3) 61–90 days – a call script, 5 lines, calm and direct, offer a payment plan split; (4) 90+ days – a final-notice call script plus the exact internal note for when to escalate. Tone: professional, never threatening, never discuss the debt with anyone but the customer. Buckets: [PASTE AGING BUCKETS WITH FIRST NAMES, BALANCES, SERVICE DATES].

EXPECTED OUTPUT

An aging-bucket outreach plan — text, sequence, and two call scripts — ordered oldest-first.

Step time estimate: 30 minutes per review

**WORKFLOW 13 OF 20**

The Big-Ticket Financing Close — Monthly Numbers That Fit

A prompt that turns a large replacement quote into a financing talk track: the monthly-payment framing for each option, the application walkthrough, and the answers to the three questions customers always ask — so sticker shock becomes a signature.

Estimated time-to-run: 10 minutes per big-ticket quote

13**ChatGPT or Claude, plus ServiceTitan estimates with embedded financing applications****HOW TO INPUT**

Step 1: **Build the replacement proposal** in ServiceTitan with the financing application embedded, so approval can happen on the spot.

Step 2: **Replace the placeholders** — equipment, total price, available financing plans and terms, and the customer's stated budget concern if any.

Step 3: **Present monthly-first** — lead with the payment, then the total, then the application.

PROMPT

You are a comfort advisor presenting a big-ticket replacement. Write the financing talk track: (1) the monthly-first framing — present each option as dollars-per-month first, total second, one sentence each; (2) the application walkthrough — 4 plain-language steps for applying on the tablet, including how long it takes and that it won't affect anything until approved; (3) answers to the three questions customers always ask — "what's the catch," "what if I'm not approved," and "can I pay it off early" — one honest paragraph each, no invented terms or rates, only use the real plan details below. Never quote a rate or term you don't have in writing. Quote: [EQUIPMENT, TOTAL, FINANCING PLANS WITH REAL TERMS].

EXPECTED OUTPUT

A financing talk track — monthly framing, application walkthrough, and three honest Q&A answers.

Step time estimate: 10 minutes per quote

WORKFLOW 14 OF 20

The On-Site Payment Push — Paid Before the Truck Rolls

A prompt that gives techs the exact payment-collection script for every method — check photo deposit, Bluetooth card tap, portal link texted on the spot, Apple/Google Pay — so invoices stop leaving the driveway unpaid.

Estimated time-to-run: 5 minutes to train, used at every job

14

ChatGPT or Claude, plus ServiceTitan Mobile payments and the customer portal

HOW TO INPUT

Step 1: **Generate the invoice in the mobile app** at job completion — it's stored automatically in the customer record.

Step 2: **Replace the placeholders** — invoice total, the payment methods you accept, and the portal link text template.

Step 3: **Ask at the door** — payment collected before the truck rolls, every time.

PROMPT

You are training field technicians to collect payment on site. Write the door script: (1) the ask — one confident sentence presenting the invoice total and the easiest payment method first; (2) the method menu — one line each for card tap (Bluetooth reader), check photo deposit, Apple/Google Pay, and the portal link you'll text them, in plain words; (3) the "I'll pay later" handler — two sentences, friendly but firm, offering to text the portal link right now while you're standing there; (4) the receipt close — one line confirming what was paid and how. Rules: never apologize for asking, never leave without either payment or a portal link sent and confirmed. Invoice: [TOTAL]. Methods accepted: [LIST].

EXPECTED OUTPUT

A door script — the ask, method menu, later-handler, and receipt close — for on-site collection.

Step time estimate: 5 minutes to train

**WORKFLOW 15 OF 20**

The Pricebook Tune-Up — Prices You Can Trust

A prompt that turns a pricebook export into an audit punch list: stale costs flagged, margins checked, categories cleaned up — so every quote that leaves a tablet is priced right.

Estimated time-to-run: 60 minutes per quarter

15

ChatGPT or Claude, plus the ServiceTitan pricebook (and Pricebook Pro supplier sync if enabled)

HOW TO INPUT

Step 1: **Export the pricebook** — item names, codes, categories, material costs, and sell prices, by category.

Step 2: **Paste the export and replace the placeholders** — flag which supplier costs changed recently and your target margin per category.

Step 3: **Work the punch list** — update costs, fix miscategorized items, and confirm the supplier sync is current.

PROMPT

You are a pricing analyst auditing a home-service pricebook. Review the export below and produce a punch list: (1) items whose material cost looks stale versus the recent supplier changes I list — name each item and the suspected gap; (2) items priced below the target margin for their category — name each with current margin; (3) category clean-up — items sitting in the wrong category or with vague names a tech can't find in the field; (4) the top 10 highest-revenue items and whether their pricing is solid. Present it as a table: item, issue, action. No invented supplier prices — only flag against the cost changes I provide. Export: [PASTE PRICEBOOK EXPORT]. Recent supplier cost changes: [PASTE]. Target margins: [PASTE BY CATEGORY].

EXPECTED OUTPUT

A pricebook punch list — stale costs, margin misses, category fixes, top-10 check — as an action table.

Step time estimate: 60 minutes per quarter

**WORKFLOW 16 OF 20**

The PO Patrol — Parts Before You Need Them

A prompt that turns the purchase-order list into a weekly procurement review: aging POs chased, replenishment requests batched, and three-way-match flags resolved — so techs never wait on parts.

Estimated time-to-run: 30 minutes per week

16 ChatGPT or Claude, plus ServiceTitan inventory and purchase orders

HOW TO INPUT

Step 1: **Open the purchase-order list** — statuses (pending, sent, partially received, received in full, canceled) and the Aging column showing how long each has been waiting.

Step 2: **Copy the open POs and replace the placeholders** — vendor names, items, required-by dates, and any three-way-match discrepancies flagged between PO, receipt, and invoice.

Step 3: **Work the chase list** — oldest first, vendor called, dates confirmed.

PROMPT

You are a purchasing coordinator running the weekly PO review. From the open purchase orders below, produce: (1) the chase list — every PO in "sent" or "partially received" status older than [DAY THRESHOLD], with vendor, items, required-by date, and a one-line call script asking for a firm delivery date; (2) the batch — replenishment requests that can be combined into single POs by vendor; (3) the flags — any three-way-match discrepancies (PO vs. receipt vs. invoice) with the exact numbers that don't line up and who needs to resolve them. Sort everything by required-by date, soonest first. POs: [PASTE OPEN PURCHASE ORDERS WITH STATUS, VENDOR, ITEMS, AGING]. Replenishment requests: [PASTE].

EXPECTED OUTPUT

A chase list with call scripts, a batched PO plan, and a discrepancy flag list — sorted by required-by date.

Step time estimate: 30 minutes per week

WORKFLOW 17 OF 20

The Tech Scorecard Session — Coach With Numbers

A prompt that turns technician scorecards into per-tech coaching briefs: what's working, the one metric to move, and the exact conversation to have — so coaching is about numbers, not gut feel.

Estimated time-to-run: 30 minutes per review cycle

17**ChatGPT or Claude, plus ServiceTitan technician scorecards**

HOW TO INPUT

Step 1: **Pull the scorecards** — per tech: revenue, average ticket, conversion rate, memberships sold, reviews earned, callbacks, and jobs completed.

Step 2: **Copy the numbers and replace the placeholders** — no names in the AI beyond first names; keep it to performance data.

Step 3: **Hold the sessions** — one strength, one focus metric, one agreed action each.

PROMPT

You are a field supervisor coaching technicians from their scorecards. For each tech below, write a coaching brief: (1) the headline — their single strongest metric this period, stated plainly; (2) the focus — the one metric that would move their paycheck most if improved, with the math shown (e.g., conversion up 5 points × average ticket = \$X); (3) the conversation — 4 lines to say in the sit-down, leading with the strength, naming the focus metric without blame, and agreeing on one specific action. Then rank the techs by who needs coaching first. Never compare techs against each other by name in the briefs — each brief stands alone. Scorecards: [PASTE PER-TECH METRICS: REVENUE, AVG TICKET, CONVERSION, MEMBERSHIPS, REVIEWS, CALLBACKS, JOBS].

EXPECTED OUTPUT

A per-tech coaching brief — strength, focus metric with math, and sit-down script — ranked by coaching priority.

Step time estimate: 30 minutes per cycle

WORKFLOW 18 OF 20

The Daily Numbers Huddle — 10 Minutes, Whole Business

A prompt that turns yesterday's dashboard into a morning-huddle script: revenue vs. goal, what moved the needle, today's board at a glance — so the whole office starts the day looking at the same numbers.

Estimated time-to-run: 10 minutes before the huddle

18 ChatGPT or Claude, plus the ServiceTitan dashboard and KPI reports

HOW TO INPUT

Step 1: **Open the dashboard** — yesterday's completed revenue vs. goal, jobs completed, average ticket, booking rate, open estimates, and today's scheduled revenue.

Step 2: **Copy the KPIs and replace the placeholders** — real numbers only, no rounding into fiction.

Step 3: **Read the script at the huddle** and pin the one action for the day.

PROMPT

You are an owner running the morning huddle. Below are yesterday's dashboard numbers. Write a one-page huddle script as four blocks: (1) Yesterday — completed revenue vs. goal in two sentences, plus the one stat that explains the result (booking rate, average ticket, or jobs completed); (2) Today — scheduled revenue, job count, and any board risks (unassigned jobs, unconfirmed appointments); (3) The pipeline — open estimate dollars aging past 7 days and membership tune-ups due this week; (4) The one action — the single thing the whole team does today to move the needle, stated as a clear instruction. Tone: plain English, no fluff, no motivational-poster language. Numbers: [PASTE DASHBOARD KPIS]. Today's date: [DATE]. Goal: [DOLLAR GOAL].

EXPECTED OUTPUT

A one-page huddle script with yesterday's score, today's board, pipeline watch, and one team action.

Step time estimate: 10 minutes

**WORKFLOW 19 OF 20**

The Lead Source Audit — Where the Money Comes From

A prompt that turns campaign and call-tracking revenue data into keep/kill/fix decisions: which lead sources earn their spend, which are coasting on brand, and where the next dollar goes.

Estimated time-to-run: 45 minutes per month

19**ChatGPT or Claude, plus ServiceTitan marketing ROI and call-tracking reporting****HOW TO INPUT**

Step 1: **Pull the revenue-by-source report** — per lead source and campaign: spend, calls, booked jobs, completed revenue, and the tracking phone numbers tied to each.

Step 2: **Copy the numbers and replace the placeholders** — last 90 days minimum, real figures only.

Step 3: **Make the calls** — keep, kill, or fix each source, and reallocate the budget.

PROMPT

You are a marketing analyst auditing lead sources for a home-service company. From the numbers below, produce: (1) a source ranking — each lead source with revenue, spend, and return, sorted best to worst; (2) verdicts — KEEP, KILL, or FIX for each source, one sentence of reasoning each, with FIX getting the specific fix (landing page, call handling, budget cap); (3) the reallocation — where the killed budgets move, in dollars; (4) the watch list — any source with fewer than [MINIMUM CALLS] calls flagged as too thin to judge. No vanity metrics — revenue and return decide, not clicks or impressions. Numbers: [PASTE 90-DAY REVENUE BY SOURCE WITH SPEND, CALLS, BOOKED JOBS].

EXPECTED OUTPUT

A ranked source list with keep/kill/fix verdicts, a budget reallocation, and a thin-data watch list.

Step time estimate: 45 minutes per month

The Seasonal Blitz — One Campaign, Full Schedule

A prompt that builds a complete seasonal campaign in Marketing Pro: the audience, the offer, the one-time email, and the follow-up texts — so the slow weeks fill before they arrive.

Estimated time-to-run: 60 minutes per campaign

20

ChatGPT or Claude, plus ServiceTitan Marketing Pro (audience builder, one-time campaigns)

HOW TO INPUT

Step 1: **Define the audience** in the audience builder — e.g., customers with equipment over 10 years old, no membership, no visit in 18 months.

Step 2: **Replace the placeholders** — the seasonal offer, real dates, and the booking link or phone number.

Step 3: **Launch the one-time campaign** and track revenue attribution in Marketing Pro.

PROMPT

You are a marketing manager launching a seasonal campaign for a home-service company. Build the whole thing: (1) the audience — write the audience-builder criteria in plain words (equipment age, last visit date, membership status, exclude recent buyers); (2) the offer — one seasonal tune-up or safety-check offer with a real price and real dates, no fake discounts; (3) the email — under 150 words, subject line plus body, one clear booking ask, plain English; (4) two follow-up texts for non-openers — under 40 words each, second one slightly more direct; (5) the success metric — what you'll measure in Marketing Pro revenue attribution to call it a win. Every date and price must be real — never invent urgency. Campaign: [SEASON, OFFER, PRICE, DATE WINDOW]. Audience size: [COUNT].

EXPECTED OUTPUT

A complete seasonal campaign — audience criteria, offer, email, two follow-up texts, and the success metric.

Step time estimate: 60 minutes per campaign
