

The Electricians Playbook

Twenty AI workflows for electrical contractors — built for owners, dispatchers, and service electricians.

What's inside

Service-call quoting and same-day quote follow-up built for electrical work

Panel upgrades, troubleshooting triage, and permit paperwork that passes inspection

Review generation, service agreements, referrals, and slow-week reactivation

Price-objection scripts, supplier quote comparison, and honest estimate breakdowns

Apprentice training checklists, emergency-call triage, and a monthly numbers review

12 months of free updates — every improvement ships to your inbox

WORKFLOW 01 OF 20

The Service Call Quote — Line Items That Win the Job on the Spot

A prompt that turns a service electrician's field notes into a clean, line-itemed residential quote: the problem in plain English, the fix, parts and labor separated, and one legitimate "while I'm here" recommendation — so the tech quotes from the truck and the customer can say yes before you leave.

Estimated time-to-run: 10 minutes per quote

01

ChatGPT or Claude, plus your dispatch software (ServiceTitan, Housecall Pro, Jobber — or a paper quote form)

HOW TO INPUT

Step 1: **Write the field notes.** After diagnosing, jot the problem, the recommended fix, the parts needed with your cost, and the labor hours.

Step 2: **Paste the notes and replace the placeholders** — real part names, real prices, first names only for the customer.

Step 3: **Build the quote** in your software from the AI's line items and present it on site.

PROMPT

You are a service electrician writing a customer quote from field notes. Write: (1) a one-paragraph plain-English explanation of the problem — no jargon, no scare tactics; (2) the quote as line items — each line names the part or task, the quantity, and the price, with parts and labor on separate lines; (3) one "while I'm here" recommendation — only if a genuine related issue was found, framed as optional; (4) a two-sentence spoken script for presenting the quote at the door, ending with a yes/no question. Rules: use only the prices and parts given; never invent warranties or hazards. Field notes: [PROBLEM FOUND, RECOMMENDED FIX]. Parts: [PART NAME — QTY — YOUR PRICE]. Labor: [HOURS — RATE]. Related finding (if any): [FINDING].

EXPECTED OUTPUT

A line-itemed quote, a plain-English problem explanation, and a door-side presentation script.

Step time estimate: 10 minutes per quote

WORKFLOW 02 OF 20

The Day-2 Text — Same-Day Quote Follow-Up That Doesn't Nag

A three-touch follow-up sequence for quotes that went out the same day: a thank-you text the day of, a check-in on day 2, and a direct ask on day 7 — written for electrical work where the customer often just needs a nudge, not a sales pitch. No discounts invented, no fake urgency.

Estimated time-to-run: 5 minutes per quote

02

ChatGPT or Claude, plus your dispatch software's texting or your phone

HOW TO INPUT

Step 1: **Note the quote details** — client first name, work quoted, total, and the date sent.

Step 2: **Replace the placeholders** — first name only, real service description, real amount.

Step 3: **Send on schedule** — text 1 the day of, text 2 on day 2, email on day 7.

PROMPT

You are an office manager at an electrical contracting company following up on a same-day service quote. Write three messages: (1) a same-day text under 40 words — thanks them by first name, names the work quoted, says the quote is in their inbox; (2) a day-2 check-in text under 40 words — references the specific work, asks one yes/no question; (3) a day-7 email — 3 short paragraphs, answers one common question about this type of work, ends with a plain direct ask and an easy out if they went another direction. No exclamation points, no fake urgency, no discounts invented out of thin air. Client first name: [FIRST NAME]. Work quoted: [SERVICE + ONE-LINE SCOPE]. Quote total: [AMOUNT]. Date sent: [DATE].

EXPECTED OUTPUT

Three ready-to-send follow-up messages matched to the quote's age.

Step time estimate: 5 minutes per quote

WORKFLOW 03 OF 20

The 100A to 200A Estimate — Panel Upgrade Numbers in 15 Minutes

A prompt that builds a complete panel-upgrade estimate from your site notes: main panel, meter base work, grounding, breakers, permit fee, and labor — separated into clear lines, with an honest "what could change this" note for unknowns like the service mast or a corroded meter base. It uses your real numbers; it never invents pricing.

Estimated time-to-run: 15 minutes per estimate

03

ChatGPT or Claude, plus your panel brand pricing (Square D, Eaton, Siemens, or whichever you stock)

HOW TO INPUT

Step 1: **Collect the site facts** — current service size, panel brand and condition, house age and approximate square footage, what is driving the upgrade (EV charger, addition, failing panel), and your parts cost plus labor hours.

Step 2: **Paste the facts and replace the placeholders** — real numbers only, yours.

Step 3: **Present the estimate** with the "what could change this" note so the customer sees no surprises coming.

PROMPT

You are an estimator at an electrical contracting company building a panel upgrade estimate. Take the facts below and write: (1) a 2-sentence plain-English summary of what the upgrade involves; (2) the estimate as line items — panel and breakers, meter base/service work, grounding, permit fee, labor — each with your price; (3) a short "what could change this" note listing the specific unknowns (service mast condition, meter base replacement, utility coordination) and what each would add. Rules: use only the prices given; do not invent warranty terms; describe code compliance in general terms ("per current local code") rather than citing specific code articles. Facts: [CURRENT AMPS, NEW AMPS, PANEL BRAND/CONDITION, HOUSE AGE + SQ FT, REASON FOR UPGRADE]. Parts cost: [LIST]. Labor hours: [HOURS]. Permit fee: [AMOUNT].

EXPECTED OUTPUT

A line-itemed panel upgrade estimate with an honest unknowns note.

Step time estimate: 15 minutes per estimate

WORKFLOW 04 OF 20

The Permit Pack — Paperwork That Passes the First Inspection

A prompt that turns your job scope notes into a complete permit submittal packet: the scope narrative, panel schedule, load summary, and an AHJ checklist of what most jurisdictions ask for — so the application goes in once, correctly. It tells you to verify your local AHJ's list; it never claims to know every jurisdiction's rules.

Estimated time-to-run: 20 minutes per permit

04

ChatGPT or Claude, plus your scope notes and your AHJ's permit checklist (download it from their site)

HOW TO INPUT

Step 1: **Write the scope notes** — what is being installed or changed, panel size, breaker and wire sizes, and the load calculation result.

Step 2: **Paste the notes and replace the placeholders** — your real figures.

Step 3: **Assemble the packet** — print the AI's documents, attach your AHJ's checklist, and submit.

PROMPT

You are an office coordinator assembling an electrical permit submittal. From the job details below, write: (1) a scope-of-work narrative — one paragraph a plan reviewer can read in a minute, naming the existing conditions and the proposed work; (2) a panel schedule table — circuit number, description, breaker size, wire size, one per line; (3) a one-paragraph load calculation summary stating the existing and proposed loads and the service size they require; (4) a submittal checklist of the items most AHJs require (application, scope narrative, panel schedule, load calc, contractor license) with a reminder to verify against our local AHJ's published list. Use only the figures given. Job details: [EXISTING CONDITIONS, PROPOSED WORK, PANEL SIZE]. Panel schedule: [CIRCUIT — DESCRIPTION — BREAKER — WIRE, one per line]. Load calc: [EXISTING LOAD, PROPOSED LOAD, SERVICE SIZE]. AHJ: [JURISDICTION NAME].

EXPECTED OUTPUT

A scope narrative, panel schedule, load summary, and AHJ submittal checklist.

Step time estimate: 20 minutes per permit

WORKFLOW 05 OF 20

The 5-Question Triage — What to Ask Before You Roll the Truck

A prompt that turns a vague "my power's out" call into a proper intake: five questions that separate a tripped GFCI from a real emergency, a blown utility transformer from an internal fault — so you dispatch the right response, quote the right call, and stop sending a truck to problems the homeowner can fix in 30 seconds.

Estimated time-to-run: 3 minutes per call

05 ChatGPT or Claude, plus your phone intake notes

HOW TO INPUT

Step 1: **Ask the five questions** on the call and jot the answers — area affected, breaker positions, burning smell or sparking, recent work or storms, whether neighbors are out too.

Step 2: **Paste the answers and replace the placeholders** — what the caller actually said.

Step 3: **Act on the recommendation** — emergency dispatch, scheduled service call, or talk them through the safe 30-second check.

PROMPT

You are a dispatcher at an electrical contracting company triaging an incoming service call. Given the caller's answers below, write: (1) your five intake questions with a one-line note on what each answer tells you; (2) a verdict – EMERGENCY DISPATCH (burning smell, arcing, sparking, hot panel), SCHEDULE SERVICE CALL (dead circuit, dead outlets, flickering with no smell), or SAFE SELF-CHECK (talk them through resetting a GFCI or checking one breaker – only actions that are safe for a homeowner; never have them open a panel or touch wiring); (3) a two-sentence note for the job record summarizing the call. Caller answers: [AREA AFFECTED, BREAKER POSITIONS, SMELL/SPARKING Y/N, RECENT WORK OR STORMS, NEIGHBORS AFFECTED Y/N].

EXPECTED OUTPUT

Five intake questions, a dispatch verdict, and a job-record note.

Step time estimate: 3 minutes per call

WORKFLOW 06 OF 20

The Review Engine — Reviews After Every Closed Job

A prompt that writes your whole review machine: the initial ask, two polite follow-ups, and reply templates for 5-star, 4-star, and negative reviews — all in a real electrician's voice. Pair it with your dispatch software's automated review requests, or send the messages manually after each closed job.

Estimated time-to-run: 20 minutes to set up, 5 minutes per review reply

06

ChatGPT or Claude, plus your dispatch software's review automation (or manual text/email after each job)

HOW TO INPUT

Step 1: **Decide the trigger** — review ask sent when the job closes or the invoice is paid; note whether you send by text, email, or both.

Step 2: **Replace the placeholders** — your review link, business name, and the services you want named.

Step 3: **Load the copy** into your automation or your after-job routine, and use the reply templates as reviews land.

PROMPT

You are a marketing-minded office manager setting up review collection for an electrical contractor. Write: (1) the initial review ask — under 160 characters if text, warm, thanks them by first name, names the service, one link, no begging; (2) a first follow-up for 3 days later — shorter, assumes they meant to; (3) a second follow-up for 5 days later — final, gracious, no guilt; (4) three review-reply templates — one for 5-star, one for 4-star, one for a negative review (acknowledge, take it offline, give a name and number). Business: [BUSINESS NAME]. Service: [SERVICE]. Review link: [URL].

EXPECTED OUTPUT

Review ask plus two follow-ups and reply templates for 5-star, 4-star, and negative reviews.

Step time estimate: 20 minutes to set up, 5 minutes per review reply

WORKFLOW 07 OF 20

The Annual Safety Plan — Service Agreements That Sell Themselves

A prompt that packages an annual electrical safety inspection into a service agreement: what's checked per visit (panel, GFCIs, detectors, grounding, visible wiring), the price, and the pitch email — plus a one-paragraph script your techs can say on site. Only includes priority scheduling or discounts if you actually offer them.

Estimated time-to-run: 30 minutes to build the offer

07

ChatGPT or Claude, plus your dispatch software's recurring-job or membership feature (or a simple annual reminder list)

HOW TO INPUT

Step 1: **Define the plan** — what the annual inspection covers, the price, and whether members get priority scheduling or a discount you will actually honor.

Step 2: **Paste the plan details and replace the placeholders** — real services, real price.

Step 3: **Offer it on every completed job** — techs use the mention script, the office sends the pitch email.

PROMPT

You are a service manager packaging an annual electrical safety plan. Build: (1) the plan offer — name, what is inspected per visit (bullet list: panel condition, GFCI/AFCI testing, smoke and CO detectors, grounding, visible wiring), visit frequency, and annual price, in plain English a homeowner understands in 30 seconds; (2) a pitch email under 150 words — leads with the one headache the plan removes (not knowing whether the home's electrical is safe), states the price plainly, ends with a yes/no question; (3) a one-paragraph script for techs to mention it on site. Rules: only include services you genuinely perform; never promise priority scheduling or discounts you will not honor. Plan details: [VISITS PER YEAR, INSPECTION CHECKLIST, ANNUAL PRICE]. Perks you actually offer: [PERKS OR "NONE"].

EXPECTED OUTPUT

A plan offer sheet, a pitch email, and a tech mention script.

Step time estimate: 30 minutes to build the offer

WORKFLOW 08 OF 20

The Slow-Week Blitz — Fill Next Week's Schedule

A prompt that turns your past-customer list into a targeted reactivation push: the AI segments who to contact — quoted-but-never-booked, one-off service calls from 12+ months ago, old safety inspections — and writes the message for each segment. One afternoon of work that fills next week's board.

Estimated time-to-run: 45 minutes per campaign

08 ChatGPT or Claude, plus your customer list (dispatch software export or spreadsheet)

HOW TO INPUT

Step 1: **Pull the segments** — counts and service types per segment, not full customer records; keep personal details out of the AI.

Step 2: **Paste the segment summaries and replace the placeholders** — segment sizes and what they last had done.

Step 3: **Send the messages** — text for recent contacts, email for older ones.

PROMPT

You are a marketer for an electrical contracting company running a slow-week reactivation. Given the segments below, write: (1) one message per segment — under 120 words, references the specific work they had done or were quoted, gives one genuine reason to book now (season, safety angle, open schedule — only if true), one clear call to action; (2) a send order — which segment gets contacted first and why. Rules: every message must reference real past work; no fake deadlines; neighborly tone, not salesy. Segments: [SEGMENT NAME — WHO THEY ARE — COUNT, e.g. "Panel quotes never booked, 2025 — 38"].

EXPECTED OUTPUT

One message per segment with a send order, ready to text or email.

Step time estimate: 45 minutes per campaign

WORKFLOW 09 OF 20

The Price Objection Playbook — Answers for "Your Price Is Too High"

A prompt that writes calm, honest responses to the price objections electricians hear every week: what's actually behind the number (licensed labor, permits, real parts, the warranty you genuinely offer), a good-better-best reframing where it fits, and how to walk away gracefully when it's just not your job. Never badmouths the cheaper competitor — it sells your value instead.

Estimated time-to-run: 10 minutes per objection

09

ChatGPT or Claude

HOW TO INPUT

Step 1: **Note the objection** — what the customer said and the job it applies to.

Step 2: **Replace the placeholders** — the objection, the job, and the real things behind your price.

Step 3: **Use the script** on the call or in the follow-up text — whichever fits the moment.

PROMPT

You are a sales-minded owner of an electrical contracting company handling a price objection. Write: (1) a calm 3-sentence response that acknowledges the concern, then names two or three specific things behind our price — licensed electricians, permits and inspections, name-brand parts we stock, the warranty we actually offer; (2) a good-better-best reframe — if there is a legitimate smaller scope that solves the immediate problem, describe it honestly alongside the full job; (3) a graceful walk-away line for when the customer will go with the cheaper bid — leaves the door open, no bitterness. Keep every piece under 80 words, professional, no trash-talking competitors. Objection: [WHAT THEY SAID]. Job: [SERVICE + PRICE]. Behind our price: [LICENSE/INSURANCE, PERMITS INCLUDED Y/N, PART BRANDS, WARRANTY TERMS].

EXPECTED OUTPUT

A price-objection response, a good-better-best reframe, and a walk-away line.

Step time estimate: 10 minutes per objection

WORKFLOW 10 OF 20

The Clean Estimate — Material and Labor Breakdowns That Win Trust

A prompt that turns your distributor pricing and labor hours into a customer-facing estimate with materials and labor clearly separated — so the customer sees exactly what the parts cost and what the expertise costs. It uses your markup policy, whatever it is; it never sets pricing for you.

Estimated time-to-run: 15 minutes per estimate

10

ChatGPT or Claude, plus your distributor quote or price list (Graybar, Rexel, City Electric, or your local supply house)

HOW TO INPUT

Step 1: **List the materials** — part names, quantities, and your cost from the distributor.

Step 2: **Add labor hours and your markup policy**, then replace the placeholders.

Step 3: **Present the estimate** — the AI's plain-English summary goes on top, line items below.

PROMPT

You are an estimator at an electrical contracting company building a customer estimate. Take the materials, labor, and markup policy below and write: (1) a 2-sentence plain-English summary of the job; (2) the estimate as line items – materials (part, quantity, price) and labor (task, hours, rate) on separate lines, each with the markup policy applied as stated; (3) one short paragraph explaining in plain terms what the labor covers (diagnosis, installation, testing, cleanup, permit handling if included). Rules: apply the markup policy exactly as given – do not add, change, or invent markup; use only the parts and prices given. Materials: [PART – QTY – YOUR COST, one per line]. Labor: [TASK – HOURS – RATE, one per line]. Markup policy: [YOUR POLICY, e.g. "20% on materials, stated as policy"]. Permit included: [YES/NO + FEE].

EXPECTED OUTPUT

A line-itemed estimate with materials and labor separated and a plain-English summary.

Step time estimate: 15 minutes per estimate

WORKFLOW 11 OF 20

The Apprentice Checklist — Consistent Training Without the Babysitting

A prompt that turns your way of doing common apprentice tasks into printable step checklists with sign-off lines: rough-in, device trim-out, panel changeout assistance, and the safety basics (lockout/tagout, testing dead). Every apprentice learns it the same way, and the journeyman signs off each step instead of hovering.

Estimated time-to-run: 20 minutes per checklist

11

ChatGPT or Claude, plus a printer (or your dispatch software's document/attachment feature)

HOW TO INPUT

Step 1: **Pick the task** — rough-in, trim-out, panel assistance, or a safety procedure.

Step 2: **Describe how you do it** — your order of operations, your quality checks, your non-negotiables — and replace the placeholders.

Step 3: **Print the checklist** and have the journeyman sign off each step as the apprentice completes it.

PROMPT

You are a master electrician writing a training checklist for an apprentice. Turn the procedure below into a numbered step checklist: each step is one action, written as a clear instruction; after every 3-4 steps add a [QUALITY CHECK] line describing what the journeyman verifies; end with a [SIGN-OFF] block (task name, apprentice name, journeyman name, date). Begin the checklist with a [SAFETY FIRST] block covering lockout/tagout and testing dead before touching anything, specific to this task. Use only the procedure given — do not add steps that were not described. Procedure: [TASK NAME + YOUR ORDER OF OPERATIONS, one step per line]. Your non-negotiables: [LIST].

EXPECTED OUTPUT

A printable step checklist with quality checks and a sign-off block.

Step time estimate: 20 minutes per checklist

WORKFLOW 12 OF 20

The 2 AM Triage — Emergency Call Screening That Protects Your Crew

A prompt that builds your after-hours decision tree: which calls get a tech dispatched tonight (burning smell, arcing, sparking, a hot panel), which wait for morning, and which are utility problems the power company handles. It also writes exactly what to tell the caller to do right now — only safe actions like switching off a breaker, never opening a panel or touching wiring.

Estimated time-to-run: 15 minutes to set up the tree

12 ChatGPT or Claude, plus your on-call phone procedure (whoever answers after hours)

HOW TO INPUT

Step 1: **Write your current after-hours rules** — what you treat as a true emergency, your emergency rate, and your utility's outage line.

Step 2: **Replace the placeholders** — your rules, your rate, your coverage area.

Step 3: **Give the tree to whoever answers** — the dispatcher or the on-call tech reads it verbatim.

PROMPT

You are the owner of an electrical contracting company writing an after-hours call triage tree for the person answering the phone. Write: (1) a decision tree — three branches: DISPATCH TONIGHT (burning smell, visible arcing or sparking, hot/burning panel, power out with a medical device on site), SCHEDULE FOR MORNING (dead circuit, dead outlets, tripping breaker with no smell), CALL THE UTILITY FIRST (whole neighborhood dark, lines down, meter or service drop damage — give the utility outage line); (2) a "say this now" script per branch — under 60 words, telling the caller exactly what to do right now — only safe actions (turn off the breaker, leave the panel alone, get out if they smell burning plastic); (3) a two-sentence log note template for the morning handoff. Never instruct the caller to open a panel, touch wiring, or reset a main breaker repeatedly. Our rules: [EMERGENCY CRITERIA]. Emergency rate: [RATE]. Utility outage line: [NUMBER].

EXPECTED OUTPUT

An after-hours triage tree, caller scripts per branch, and a morning handoff log template.

Step time estimate: 15 minutes to set up the tree

WORKFLOW 13 OF 20

The Seasonal Check — Pre-Holiday and Storm-Season Campaigns

A prompt that builds your two biggest seasonal campaigns: the pre-holiday safety check (outlets, lighting, detectors, panel — before the house fills with guests and space heaters) and storm-season readiness (whole-home surge protection, generator interlocks, service mast inspection). It writes the emails and tells you who to send them to.

Estimated time-to-run: 45 minutes per campaign

13 ChatGPT or Claude, plus your customer list (dispatch software export or spreadsheet)

HOW TO INPUT

Step 1: **Pick the season and the offer** — pre-holiday safety check or storm-season readiness, with your real price.

Step 2: **Pull the target segment** — past customers who have never had the relevant service; counts and service types, not full records.

Step 3: **Send the campaign** by email (and text for recent customers).

PROMPT

You are a marketer for an electrical contracting company writing a seasonal campaign email. Write: (1) a subject line plus email body under 150 words — opens with the seasonal reason (guests and heaters coming, storm season approaching), names the specific check or service, states the price plainly, one clear call to action; (2) a 40-word text version for recent customers; (3) a send list definition — who gets this email and who does not (exclude anyone who had this service in the last 12 months). Rules: the offer must be real and bookable; no fake deadlines; neighborly tone. Season: [PRE-HOLIDAY / STORM SEASON]. Offer: [SERVICE + PRICE]. Target segment: [WHO THEY ARE — COUNT].

EXPECTED OUTPUT

A campaign email, a text version, and a send-list definition.

Step time estimate: 45 minutes per campaign

WORKFLOW 14 OF 20

The Missed-Call Text-Back — Catch Every After-Hours Caller

A prompt that writes your automatic missed-call text-back and the morning triage routine: the text that goes out instantly, and a prioritized callback queue that sorts emergency keywords (burning, sparking, no power) above quote requests. Every caller hears back in minutes, and real emergencies get called first.

Estimated time-to-run: 15 minutes to set up

14

ChatGPT or Claude, plus missed-call text-back (built into most dispatch software or a business texting app)

HOW TO INPUT

- Step 1: **Turn on missed-call text-back** in your dispatch software or texting app.
- Step 2: **Replace the placeholders** — your business name, hours, and emergency line.
- Step 3: **Paste the text-back copy** into the automation and run the morning queue routine daily.

PROMPT

You are an office manager at an electrical contracting company setting up missed-call text-back. Write: (1) the instant text-back — under 160 characters, thanks them, names the business, says when we will call back (e.g. "first thing in the morning"), gives the emergency line for true emergencies; (2) a morning triage routine — how to sort overnight missed calls into three queues: EMERGENCY (keywords: burning, sparking, smoke, no power with medical need), QUOTE REQUEST, GENERAL — with the callback order and a one-line log note per call; (3) a 40-word callback text for each queue. Business: [BUSINESS NAME]. Hours: [HOURS]. Emergency line: [NUMBER].

EXPECTED OUTPUT

A missed-call text-back, a morning triage routine, and callback texts per queue.

Step time estimate: 15 minutes to set up

WORKFLOW 15 OF 20

The Collections Ladder — Get Paid Without the Awkward Call

A prompt that builds a full invoice-chasing sequence for electrical jobs — gentle reminder, firm nudge, final notice — calibrated to how overdue the invoice is. The early reminders can ride on your dispatch software's automated follow-ups; you personally send the firmer messages at 14 and 30 days.

Estimated time-to-run: 15 minutes per collections block

15

ChatGPT or Claude, plus your dispatch software's automated invoice follow-ups (or manual email/text)

HOW TO INPUT

Step 1: **Pull the overdue list** — invoice number, amount, days overdue, client first name.

Step 2: **Copy the overdue rows and replace the placeholders** — invoice numbers and amounts are fine; first names only.

Step 3: **Send in sequence** — let automation run the early reminders, personally send the firmer messages at 14 and 30 days.

PROMPT

You are an accounts coordinator collecting overdue invoices for an electrical contractor without burning relationships. For each invoice below, write three messages: (1) the gentle reminder — assumes oversight, states invoice number, amount, and original due date, asks them to use the payment link; (2) the firm nudge for 14+ days overdue — direct, references the payment terms they agreed to, asks for a specific payment date; (3) the final notice for 30+ days — plain about next steps (no new work scheduled until the balance clears), no threats you would not follow through on. Every message under 80 words. Invoices: [INVOICE #, AMOUNT, DAYS OVERDUE, CLIENT FIRST NAME — one per line]. Payment terms: [TERMS, e.g. NET 15].

EXPECTED OUTPUT

A three-stage collection message per invoice, matched to days overdue.

Step time estimate: 15 minutes per collections block

WORKFLOW 16 OF 20

The Supplier Scorecard — Compare Distributor Quotes in Minutes

A prompt that compares two or three distributor quotes line by line — unit prices, missing line items, lead times, delivery fees — so you catch the quote that looks cheaper but skips the breakers, or the one that's higher but arrives tomorrow. Works with Graybar, Rexel, City Electric, your local supply house, or any combination.

Estimated time-to-run: 10 minutes per comparison

16 ChatGPT or Claude, plus the distributor quotes (email, PDF, or counter ticket)

HOW TO INPUT

Step 1: **Gather the quotes** — for the same bill of materials, from two or three suppliers.

Step 2: **Paste the line items and replace the placeholders** — supplier name, part, quantity, unit price, lead time, delivery fee.

Step 3: **Order from the winner** — and keep the scorecard in the job file.

PROMPT

You are a purchasing-minded office manager comparing electrical distributor quotes. Given the quotes below for the same bill of materials, write: (1) a line-by-line comparison — each part with each supplier's unit price and extended price side by side; (2) a flag list — any line item a supplier omitted or substituted, any price that looks like a typo (far above or below the others), and the delivery fee and lead time per supplier; (3) a verdict — which supplier wins on total cost, which wins on speed, and your one-line recommendation. Compare only what is quoted — do not invent prices or availability.
Quotes: [SUPPLIER — PART — QTY — UNIT PRICE — LEAD TIME — DELIVERY FEE, one per line].
Job: [JOB NAME].

EXPECTED OUTPUT

A line-by-line comparison, a flag list, and a buy recommendation.

Step time estimate: 10 minutes per comparison

WORKFLOW 17 OF 20

The Code Notes — Inspection-Ready Documentation Every Job

A prompt that turns your field notes into clean inspection documentation: what was installed, breaker and wire sizes, GFCI and AFCI locations, grounding — written as a job record for the file and the inspector. It's documentation, not a certification; the AHJ inspector is the authority, and the prompt never claims otherwise.

Estimated time-to-run: 10 minutes per job

17 ChatGPT or Claude, plus your job notes and photos

HOW TO INPUT

Step 1: **Gather the job record** — what was installed, sizes, locations; describe photos in words (do not upload customer property photos).

Step 2: **Paste the notes and replace the placeholders** — the real installed details.

Step 3: **File the document** with the job record and have it on hand for the inspector.

PROMPT

You are an office coordinator writing inspection documentation for a completed electrical job. From the field notes below, write: (1) a one-paragraph scope summary — what was installed or changed, in plain terms; (2) an installation schedule — each item on its own line with circuit, breaker size, wire size, and location; (3) a protection summary — where GFCI and AFCI protection was provided, stated factually as installed; (4) a grounding and bonding note — what was installed, in one paragraph. Rules: record only what was actually installed — never claim a code article is satisfied; use the phrase "installed per the scope and local code requirements" and leave code interpretation to the AHJ. Field notes: [WHAT WAS INSTALLED — BREAKER/WIRE SIZES — LOCATIONS, one item per line]. GFCI/AFCI locations: [LIST]. Grounding: [WHAT WAS INSTALLED].

EXPECTED OUTPUT

A scope summary, installation schedule, protection summary, and grounding note for the job file.

Step time estimate: 10 minutes per job

WORKFLOW 18 OF 20

The Panel Talk — Plain-English Explanations That Sell the Safety Work

A prompt that writes the customer-education piece that makes panel replacements sell themselves: why their Federal Pacific or Zinsco panel, 60-amp service, or double-tapped breakers is a problem — in plain English, with honest urgency framing and zero scare tactics. It describes real conditions; it never invents hazards that aren't there.

Estimated time-to-run: 10 minutes per explanation

18 ChatGPT or Claude

HOW TO INPUT

Step 1: **Note the actual condition** — panel brand and age, service size, what you found (double-tapped breakers, no main breaker, corrosion, aluminum branch wiring).

Step 2: **Replace the placeholders** — only conditions you actually observed.

Step 3: **Send or say it** — email the write-up after the estimate, or use the spoken version on site.

PROMPT

You are a service electrician explaining to a homeowner why their electrical panel needs attention. Write: (1) a 3-paragraph email — paragraph 1 names what we found in plain English, paragraph 2 explains why it matters (in terms of safety and reliability, not jargon), paragraph 3 states the recommendation and the cost plainly; (2) a 60-word spoken version for the tech to use on site. Rules: describe only the conditions given — never invent hazards; frame urgency honestly (if it can wait, say so; if it is a genuine safety concern, say that plainly); no scare tactics, no fake statistics. Conditions found: [PANEL BRAND + AGE, SERVICE SIZE, SPECIFIC FINDINGS]. Recommendation: [RECOMMENDATION + PRICE].

EXPECTED OUTPUT

A customer education email and a 60-word spoken version.

Step time estimate: 10 minutes per explanation

The Referral Ask — Turn Every Happy Customer Into Three More

A prompt that writes your post-job referral ask: the thank-you text that goes out when the job closes, the referral request a few days later, and a neighborhood-framed line your techs can say on site ("if any neighbors mention flickering lights..."). No incentive promised unless your shop actually offers one — the ask works on goodwill alone.

Estimated time-to-run: 10 minutes to set up

19 ChatGPT or Claude, plus your dispatch software's texting or your phone

HOW TO INPUT

Step 1: **Decide the timing** — thank-you text at job close, referral ask 3-5 days later.

Step 2: **Replace the placeholders** — business name, the service performed, and your referral incentive if you have one (or "none").

Step 3: **Send after every closed job** and give techs the on-site line.

PROMPT

You are an office manager at an electrical contracting company building a referral routine. Write: (1) a job-close thank-you text under 40 words — thanks them by first name, names the service, no ask; (2) a referral ask text for 3-5 days later under 60 words — asks who they know that might need an electrician, keeps it warm and pressure-free, mentions the incentive only if one exists; (3) a one-line script for techs to say on site — neighborhood-framed, natural. Rules: never promise an incentive that does not exist; no guilt, no pressure. Business: [BUSINESS NAME]. Service: [SERVICE]. Referral incentive: [INCENTIVE OR "NONE"].

EXPECTED OUTPUT

A thank-you text, a referral ask text, and a tech on-site line.

Step time estimate: 10 minutes to set up

The Monthly Snapshot — Turn Your Numbers Into Next Month's Moves

A prompt that turns your month's numbers into a one-page action plan: which job types earned, which just kept techs busy, where quoting or pricing needs to move — built only on the figures you paste in. No invented benchmarks, no industry averages; your numbers, your decisions.

Estimated time-to-run: 25 minutes per month

20

ChatGPT or Claude, plus your dispatch software's reports or your books (revenue by job type, quotes sent and converted, average ticket)

HOW TO INPUT

Step 1: **Pull the month's numbers** — revenue by job type, quotes sent, quote conversion, average ticket, callbacks if you track them.

Step 2: **Paste the numbers and replace the placeholders** — aggregate figures only, no client-level data.

Step 3: **Run the plan** — assign each action to a person and a date.

PROMPT

You are a no-nonsense business advisor reviewing an electrical contractor's month. Given the numbers below, write a one-page plan: (1) a ranking of job types by profitability with a one-line verdict each (grow it, price it up, or cut it); (2) three specific actions for next month — each with an owner (owner, dispatcher, lead tech) and a done-by date, concrete enough to actually finish; (3) one thing to stop doing. Base everything only on the numbers given — do not invent costs, margins, or benchmarks; if a figure is missing, say what to track instead of guessing. Numbers: [JOB TYPE — REVENUE — APPROXIMATE MARGIN OR COST NOTE — one per line]. Quotes sent: [COUNT]. Quote conversion: [RATE]. Average ticket: [AMOUNT]. Month-over-month trend: [UP/FLAT/DOWN + NOTE].

EXPECTED OUTPUT

A ranked profit verdict per job type, three owned actions, and one thing to stop.

Step time estimate: 25 minutes per month

Your AI stack

Every playbook ends with the stack — the minimal set of subscriptions this work actually requires, and the ones to skip. AI subscription confusion is a real adoption barrier: too many tools, overlapping jobs, money leaking every month to dashboards nobody opens. Here is the honest minimum for an electrical contracting shop.

What you need

One AI assistant subscription. This is the machine you author with: the one that drafts your estimate narratives, turns job notes into customer-ready write-ups, and does the “figuring out” before anything goes to the customer. ChatGPT or Claude — pick the one you actually open every day. One, not both. The test is usage: if you open it daily, it earns its place; if you open it monthly, it doesn’t.

Your dispatch software — the one you already pay for. ServiceTitan, Housecall Pro, Jobber, or similar. The workflows in this book are written for its dispatch board, its estimate and invoice flow, and the review-request and reminder automations already inside it — not around them. This is not a new subscription; it is a job for a tool you own.

What to skip

A second, overlapping AI subscription. Two assistants doing the same authoring job is paying twice for one job. Pick one and commit.

A paid AI add-on layered on your dispatch software until it earns its keep. If the assistant plus the automations already in your system covers follow-up, review asks, and reminders, the add-on is redundant until your own numbers prove otherwise.

Anything sold as “AI” that you can’t assign a weekly job. The standing test for every subscription: name the job it does each week. If you can’t name it, cancel it. Check quarterly — stacks grow back like weeds.

The minimal stack

NEED: - ONE AI assistant subscription (ChatGPT or Claude) — pick the one you open daily; this is what you author with - Your existing dispatch software (ServiceTitan, Housecall Pro, Jobber, or similar) — dispatch, estimates, invoices, and automations you already pay for

SKIP: - A second overlapping AI subscription — paying twice for one authoring job - Paid AI add-ons for your dispatch software until your numbers prove the need - Anything you can’t assign a weekly job — name its job each week, or cancel it

Review quarterly. Stacks grow back like weeds.

Thank you

Thank you for reading — and for doing the unglamorous part. Explaining the panel in plain English, calling back on the estimate that went quiet, triaging the after-hours voicemail: none of it is exciting. All of it is the difference between a contractor customers trust and one they forget.

If this book has a single sentence, it is the one SkillForge AI was built on: we don't lie, we don't steal, we offer value. Describe only what was actually observed. Send follow-ups worth receiving. Quote honest ranges — and when you find a claim you can't prove, either prove it or remove it the same day. The AI will make you fast. The ethic is what makes you worth buying from.

Go run your next workflow like it matters. Because it does.
