

The Pest Control Playbook

Twenty AI workflows for pest control companies — built for owners, office staff, and technicians.

What's inside

Route-density quoting, daily route building, and slow-day fill campaigns from your real stop list
Seasonal reminders, service-agreement renewals, and price-increase letters that keep accounts
Tech notes turned into customer-facing summaries, prep instructions, and post-treatment follow-ups
Review generation, referral asks, mosquito and termite upsells, and commercial proposals
A monthly numbers review built on your own reports — recurring revenue, retention, route efficiency

12 months of free updates — every improvement ships to your inbox

WORKFLOW 01 OF 20

The Route-Density Quote — Price New Stops to Build Density

A prompt that prices and sequences new one-time or recurring quotes so each new account lands next to stops you already run: the AI groups prospect addresses by area, flags the high-density ones to prioritize, and writes the quote message that explains your scheduling — so every sale makes the route tighter.

Estimated time-to-run: 15 minutes per batch of quotes

01

ChatGPT or Claude, plus your customer list and schedule (any scheduling software — FieldRoutes, PestPac, or your own system)

HOW TO INPUT

Step 1: **Pull your current route footprint.** List the areas, neighborhoods, or ZIP codes where you already have recurring stops, plus the prospect's service area (cross-streets or ZIP only — never paste full customer addresses into the AI).

Step 2: **Add the prospect details** — first name, service requested, your quoted price, and which days you already run near them.

Step 3: **Replace the placeholders**, then use the output to prioritize which quotes to chase first and to set the prospect's service day.

PROMPT

You are an office manager at a pest control company. Given our existing recurring-stop areas and the new quote requests below, do three things: (1) score each request for route fit — HIGH (same day as existing nearby stops), MEDIUM (same area, different day), or LOW (out of the way); (2) recommend a service day per request that clusters with existing stops; (3) write a short quote message under 80 words that states the price, names the service, and mentions we run that area on [DAY] so they know when to expect us. No discounts invented, no fake urgency. Existing recurring areas: [NEIGHBORHOOD/ZIP LIST]. Quote requests: [FIRST NAME — SERVICE — QUOTED PRICE — AREA — one per line].

EXPECTED OUTPUT

A route-fit score per quote, a recommended service day, and a ready-to-send quote message.

Step time estimate: 15 minutes per batch of quotes

WORKFLOW 02 OF 20

The Route Builder — Tomorrow's Stops in Density Order

A prompt that turns tomorrow's recurring visits into a clean run order: clustered by area, techs matched to stop type, and the customer messages pre-written — built from your schedule export so drive time shrinks and nobody backtracks across town.

Estimated time-to-run: 20 minutes each evening

02

ChatGPT or Claude, plus your scheduling software's day view (FieldRoutes, PestPac, or your own route sheet)

HOW TO INPUT

Step 1: **Pull tomorrow's stops.** Export or copy the list: area or cross-streets (never full addresses for the AI), service type (recurring exterior, interior, mosquito, termite check, one-time), assigned tech, and time windows.

Step 2: **Paste the stop list and replace the placeholders** — areas, stop types, and tech first names.

Step 3: **Apply the run order** in your scheduling software and send the customer texts.

PROMPT

You are a dispatcher planning tomorrow's pest route. Given the stops below, produce: (1) a suggested stop order that minimizes drive time, clustered by area — keep one-time calls fitted where they add the least driving; (2) any tech reassignments you recommend and why (match stop type to tech — new-tech-friendly recurring stops vs. stops needing your senior tech); (3) a short "on my way" text template per stop under 40 words with the time window filled in. Flag any day that looks overbooked and say which stop you would move and where. Stops: [AREA, STOP TYPE, CURRENT TECH, TIME WINDOW — one per line]. Tech skills: [TECH FIRST NAME — EXPERIENCE/SKILLS].

EXPECTED OUTPUT

An ordered run list, reassignment notes, per-stop text templates, and an overbooking flag.

Step time estimate: 20 minutes each evening

WORKFLOW 03 OF 20

The Seasonal Reminder — Spring Ants, Summer Mosquitoes, Fall Rodents

A prompt that writes the seasonal reminder campaign for your recurring customers and past one-time buyers — timed to the pest pressure calendar, segmented by who is covered and who is not — so spring ants and fall rodents sell themselves before the customer starts seeing them.

Estimated time-to-run: 30 minutes per seasonal campaign

03

ChatGPT or Claude, plus your customer list with last service date and plan type

HOW TO INPUT

Step 1: **Segment the list.** Pull customers grouped by plan status: on recurring plan (covered), lapsed (no visit in 6+ months), and one-time buyers — plus first names and last service date.

Step 2: **Pick the season's pest** — spring: ants and termite swarmers; summer: mosquitoes and wasps; fall: rodents and overwintering pests. Replace the placeholders with your real offer.

Step 3: **Send the messages** — text the covered segment, email the lapsed and one-time segments with the book-now ask.

PROMPT

You are a marketer for a pest control company writing a seasonal reminder campaign. Write three messages: (1) for RECURRING customers — a text under 40 words reminding them their plan already covers [SEASON PEST] and that their tech will handle it on the next visit; (2) for LAPSED customers — an email under 120 words, notes how long it has been, ties the season's pest pressure to a real reason to restart service now, one booking ask; (3) for ONE-TIME buyers — an email under 120 words pitching the specific seasonal service (e.g. mosquito program, fall rodent exclusion inspection) with the real price and a yes/no question. Rules: only promise what your plan actually covers; no fake deadlines; no scary language. Segments: [SEGMENT — COUNT — EXAMPLE FIRST NAME]. Season and offer: [SEASON, PEST, OFFER/PRICE].

EXPECTED OUTPUT

A text for covered customers and two emails for lapsed and one-time buyers, ready to send.

Step time estimate: 30 minutes per seasonal campaign

WORKFLOW 04 OF 20

The Renewal Sequence — Service Agreements That Re-Sign Themselves

A prompt that builds your annual service-agreement renewal sequence — the 60-day heads-up, the 30-day renewal ask, and the 7-day final nudge — so recurring accounts re-sign before their term ends instead of quietly expiring.

Estimated time-to-run: 25 minutes to build, 10 minutes per renewal run

04

ChatGPT or Claude, plus your agreement list with renewal dates (any CRM or spreadsheet)

HOW TO INPUT

Step 1: **Pull agreements up for renewal.** List customers whose agreements expire in the next 60 days: first name, plan name, annual or per-visit price, and expiration date.

Step 2: **Replace the placeholders** — your plan names and real renewal terms.

Step 3: **Run the sequence** — send the 60-day notice, the 30-day ask, and the 7-day nudge to each account.

PROMPT

You are an office manager renewing pest control service agreements. Write a three-email renewal sequence: EMAIL 1 (60 days out) — under 120 words, thanks them, states the renewal date and current plan and price, notes any changes coming next term; EMAIL 2 (30 days out) — under 100 words, the direct ask to renew, includes how to renew (one click, reply, or call) and what happens if they do nothing; EMAIL 3 (7 days out) — under 80 words, final reminder, keeps the door open if they want changes to the plan. Tone: professional and appreciative, never pressuring. Customer: [FIRST NAME]. Plan: [PLAN NAME, PRICE, RENEWAL DATE]. Renewal action: [HOW THEY RENEW].

EXPECTED OUTPUT

A three-email renewal sequence ready to personalize per account.

Step time estimate: 25 minutes to build, 10 minutes per renewal run

WORKFLOW 05 OF 20

The Review Engine — 5-Star Reviews After Every Visit

A prompt that writes the review-request copy for your post-visit automation — the initial ask plus two follow-ups — and drafts replies to the reviews you receive, so your rating compounds after every completed stop.

Estimated time-to-run: 20 minutes to set up, 5 minutes per review reply

05

ChatGPT or Claude, plus your review platform link (Google Business Profile) and any post-visit messaging your software sends

HOW TO INPUT

Step 1: **Confirm your review link.** Copy your Google Business Profile review link (short link) — check it opens correctly before pasting it anywhere.

Step 2: **Replace the placeholders** — business name, link, and the services you want named.

Step 3: **Load the ask into your follow-up** — send after each completed visit, and use the reply templates for every new review.

PROMPT

You are a marketing-minded office manager setting up review collection for a pest control company. Write: (1) the initial review ask – under 160 characters if text, warm, thanks them by first name, names the service, one link, no begging; (2) a first follow-up for 3 days later – shorter, assumes they meant to; (3) a second follow-up for 5 days later – final, gracious, no guilt; (4) three review-reply templates – one for 5-star, one for 4-star, one for a negative review (acknowledge, take it offline, give a name and number). Business: [BUSINESS NAME]. Service: [SERVICE]. Review link: [URL].

EXPECTED OUTPUT

Review ask + two follow-ups ready to paste into your follow-up message, plus reply templates for 5-star, 4-star, and negative reviews.

Step time estimate: 20 minutes to set up, 5 minutes per review reply

WORKFLOW 06 OF 20

The Tech-to-Customer Translator — Field Notes Into Service Summaries

A prompt that converts a tech's stop notes into a polished customer-facing service summary: what was treated, what was observed, and any follow-up — written in plain homeowner English, kept strictly to business communication, with no chemical or application details the customer did not ask for.

Estimated time-to-run: 10 minutes per stop

06

ChatGPT or Claude, plus your techs' stop notes (paper, mobile app, or software service notes)

HOW TO INPUT

Step 1: **Gather the stop record.** Read the tech's notes from the completed visit: service performed, areas treated, conditions observed, and any recommendations.

Step 2: **Paste the notes and replace the placeholders** — describe conditions in words; first names only; leave out product names and application specifics.

Step 3: **Send the summary** to the customer by email or text, and attach it to the invoice record.

PROMPT

You are an office manager writing a post-visit service summary for a homeowner. Turn the field notes below into a customer message: (1) what we did today — 2-3 sentences in plain English, areas of the home and yard described simply; (2) what we observed — conditions found (entry points, moisture, harborage), described without jargon and without alarming language; (3) any follow-up — only real recommendations, with honest timing (next visit, soon, whenever). Keep it under 150 words, warm and professional. Never include product names, active ingredients, or application instructions. Field notes: [TECH'S STOP NOTES IN WORDS]. Customer first name: [FIRST NAME]. Service: [SERVICE TYPE].

EXPECTED OUTPUT

A polished customer-facing service summary ready to send.

Step time estimate: 10 minutes per stop

WORKFLOW 07 OF 20

The New-Customer Welcome Packet — Onboarding That Prevents No-Shows

A prompt that builds your new-customer onboarding sequence — the welcome email, the what-to-expect message, and the first-visit reminder — so new accounts show up prepared, know their schedule, and never wonder what happens next.

Estimated time-to-run: 30 minutes to build

07

ChatGPT or Claude, plus your standard plan details and scheduling process

HOW TO INPUT

Step 1: **Define the facts.** Write down your plan names, visit frequency, what happens on a first visit vs. a recurring visit, your service window policy, and how customers reach you.

Step 2: **Replace the placeholders** — real plan names, real frequencies, real contact details.

Step 3: **Send the sequence** — welcome email at sign-up, what-to-expect the day before the first visit, first-visit reminder morning-of.

PROMPT

You are an office manager onboarding a new pest control customer. Write a three-message welcome sequence: EMAIL 1 (at sign-up) — under 150 words, welcome, states their plan name and visit frequency in plain English, tells them their first visit date; MESSAGE 2 (day before first visit) — under 100 words, what to expect (how long the visit takes, that the tech will knock/announce, whether they need to be home), one line on how we communicate; MESSAGE 3 (morning of first visit) — under 40 words, confirms today's window. Tone: friendly, clear, organized. Facts: [PLAN NAME, VISIT FREQUENCY, FIRST VISIT DATE, AVERAGE VISIT LENGTH, WINDOW POLICY, CONTACT NUMBER].

EXPECTED OUTPUT

A three-message welcome sequence ready to load into your sign-up process.

Step time estimate: 30 minutes to build

WORKFLOW 08 OF 20

One-Time vs Recurring — The Comparison That Sells the Plan

A prompt that builds an honest side-by-side comparison of your one-time service vs. your recurring plan — the prospect sees the trade-off in one page, and the recurring plan wins on its own merits without a hard sell.

Estimated time-to-run: 20 minutes per service type

08**ChatGPT or Claude, plus your real one-time and recurring prices and coverage terms**

HOW TO INPUT

Step 1: **Write down the real numbers.** Your one-time price, your recurring plan's per-visit and annual price, what each covers, and the re-treatment guarantee terms you actually offer.

Step 2: **Replace the placeholders** — real prices, real coverage, real terms.

Step 3: **Send it with the quote** — attach to one-time quotes and use it in follow-ups.

PROMPT

You are a service manager writing an honest one-time vs. recurring plan comparison for a pest control prospect. Build a one-page comparison with three sections: (1) ONE-TIME SERVICE — price, what it covers, how long protection realistically lasts in one sentence, and the honest limitation (pests return; re-treatments cost extra); (2) RECURRING PLAN — per-visit and annual price, visit frequency, what is covered, and the re-treatment guarantee in plain English; (3) the bottom line — 2-3 sentences that help a homeowner decide, stating plainly who the one-time service suits and who the plan suits. Rules: only state guarantees you truly honor; no invented coverage; no fear language. Numbers: [ONE-TIME PRICE, PLAN PER-VISIT PRICE, ANNUAL PRICE, FREQUENCY]. Coverage: [WHAT EACH COVERS]. Guarantee terms: [YOUR REAL TERMS].

EXPECTED OUTPUT

A one-page honest comparison sheet ready to send with quotes.

Step time estimate: 20 minutes per service type

WORKFLOW 09 OF 20

The Add-On Upsell — Mosquito and Termite Monitoring Pitches

A prompt that writes honest add-on pitches for your seasonal services — mosquito program and termite monitoring — for the office to send and for techs to mention on site, pitched only to customers whose homes actually fit.

Estimated time-to-run: 15 minutes per add-on

09

ChatGPT or Claude, plus your add-on service descriptions and real prices

HOW TO INPUT

Step 1: **Define the add-on.** Write down what the service is, its season or schedule, the real price, and which customers it suits (e.g., homes with standing water nearby, homes never inspected for termites).

Step 2: **Replace the placeholders** — real service details, real price, real fit criteria.

Step 3: **Send and mention** — email the fit list, and give techs the on-site script.

PROMPT

You are a service manager writing an add-on upsell for a pest control company. Write: (1) an email under 120 words pitching the add-on — names who it is for, states the price plainly, ties it to the current season, ends with a yes/no question; (2) a 60-word on-site script for the tech to mention it naturally while at the home, ending with an easy yes/no; (3) a one-line note for techs on who NOT to pitch (homes that do not fit). Rules: pitch only to fitting homes; never invent coverage or guarantees; if the add-on can honestly wait until next season, say so. Add-on: [SERVICE NAME, SEASON/SCHEDULE, PRICE]. Fit criteria: [WHO IT SUITS]. Customer first name: [FIRST NAME].

EXPECTED OUTPUT

An add-on email, a tech on-site script, and a do-not-pitch note.

Step time estimate: 15 minutes per add-on

WORKFLOW 10 OF 20

The Missed-Visit Rescue — Rescheduling That Holds Revenue

A prompt that turns a missed or locked-out service visit into a booked return trip within days: the AI writes the same-day "we missed you" message, the 3-day follow-up, and the office's rescheduling options — so a locked gate does not become a canceled account.

Estimated time-to-run: 10 minutes per missed visit

10 ChatGPT or Claude, plus your schedule and two-way texting or email

HOW TO INPUT

Step 1: **Log the miss.** Note the customer's first name, the service missed, the reason (locked gate, no answer, dog in yard, customer asked to skip), and your next available days in their area.

Step 2: **Replace the placeholders** — first name, reason, and your real next-available dates.

Step 3: **Send the sequence** — same-day text, 3-day follow-up if no reply, then a call.

PROMPT

You are an office coordinator rescuing a missed pest control visit. Write: (1) a same-day text under 40 words – friendly, names the tech who came by, states plainly we could not complete the visit and why, offers two specific return dates; (2) a 3-day follow-up text under 40 words – shorter, assumes they meant to reply, repeats the two dates; (3) a one-line internal note on how to prevent this miss next time (gate code on file, dog note, reminder setting). Rules: never blame the customer; no fees mentioned unless your policy truly charges them – and only then, plainly. Details: [FIRST NAME, SERVICE, REASON FOR MISS, NEXT AVAILABLE DATES]. Prevention options: [WHAT YOU CAN PUT ON FILE].

EXPECTED OUTPUT

A same-day text, a 3-day follow-up text, and a prevention note.

Step time estimate: 10 minutes per missed visit

WORKFLOW 11 OF 20

The Pest-ID Helper — "What Am I Seeing?" Customer Education

A prompt that turns a customer's bug photo description or sighting report into a calm, plain-English identification message — what it likely is, what to do next, and when it needs a visit — kept strictly to general identification and business guidance, never pest treatment advice.

Estimated time-to-run: 5 minutes per inquiry

11 ChatGPT or Claude, plus the customer's description (photos described in words)

HOW TO INPUT

Step 1: **Get the description.** Ask the customer: where they saw it (kitchen, basement, yard), what it looked like (size, color, wings, count), and when. Describe any photo in words — do not upload customer property photos.

Step 2: **Replace the placeholders** — their description, your service options, your price if they need a visit.

Step 3: **Send the ID message** — text for simple cases, email if it needs more explanation.

PROMPT

You are an office coordinator at a pest control company answering a "what is this bug?" inquiry. Based on the description below, write a customer message under 120 words: (1) what it most likely is, stated as a likely identification, not a certainty; (2) two or three simple, non-chemical things the homeowner can check or do right now (sanitation, sealing an obvious entry point, reducing moisture); (3) when it is worth booking a visit — and when it is not. Rules: never give pesticide or application advice; if the description is unclear, say so and ask for a clearer description instead of guessing; keep the tone calm and helpful. Customer description: [WHERE SEEN, WHAT IT LOOKED LIKE, WHEN]. Our services for this: [SERVICE + PRICE IF RELEVANT].

EXPECTED OUTPUT

A plain-English identification message with next steps and an honest book-or-not verdict.

Step time estimate: 5 minutes per inquiry

WORKFLOW 12 OF 20

The Commercial Bid — Restaurants and Property Managers

A prompt that builds a professional commercial pest proposal for restaurants, property managers, and small commercial accounts: scope, frequency, documentation promises, and plain-English pricing — positioned for the audit and compliance concerns these buyers actually have.

Estimated time-to-run: 30 minutes per proposal

12 ChatGPT or Claude, plus your commercial service details and pricing

HOW TO INPUT

Step 1: **Scope the account.** Note the business type (restaurant, apartment complex, office), the pest pressure points you observed, the service frequency you recommend, and your quoted price.

Step 2: **Replace the placeholders** — real scope, real frequency, real price, real documentation you provide.

Step 3: **Send the proposal** — PDF or email, with a follow-up date set.

PROMPT

You are a commercial sales rep at a pest control company writing a proposal for a business account. Build a one-page proposal with four sections: (1) THEIR SITUATION — 2-3 sentences showing we understand their business and its pest pressure points; (2) OUR PROGRAM — service frequency, what each visit covers, and the documentation we provide (service reports, trend notes — only what we truly deliver); (3) PRICING — stated plainly, per-visit and annual; (4) NEXT STEP — one clear action and a date to decide. Rules: never claim certifications, audit-readiness, or documentation we do not actually provide; keep compliance language to what we truly do. Account: [BUSINESS TYPE, PRESSURE POINTS OBSERVED]. Program: [FREQUENCY, COVERAGE, DOCUMENTATION]. Price: [PER-VISIT AND ANNUAL].

EXPECTED OUTPUT

A one-page commercial proposal ready to send as PDF or email.

Step time estimate: 30 minutes per proposal

WORKFLOW 13 OF 20

The Slow-Route Sprint — Fill Thin Days Fast

A prompt that turns a thin route day into a full one: the AI ranks which past customers and quoted prospects near that day's stops are most likely to book, and writes the exact fill text for each — you work the list top-down until the day fills.

Estimated time-to-run: 20 minutes per thin day

13

ChatGPT or Claude, plus your customer list, quote history, and the thin day's existing stops

HOW TO INPUT

Step 1: **Find candidates.** Look for lapsed customers due for service, one-time buyers from the same season last year, and open quotes — all in or near the thin day's area. Note first names and why each is a fit.

Step 2: **Replace the placeholders** — the date, the area, and the candidate list (first names only).

Step 3: **Text top-down** — send the AI's messages in order and book the first yeses directly into the day.

PROMPT

You are a dispatcher with a thin route day to fill. Rank the candidates below by likelihood to book (recent quote > lapsed customer due for service > last year's one-time buyer), and write a text for each under 40 words: name them, name the specific opening (day + window + that we are already in their area), give one real reason it suits them, and end with a yes/no question. No exclamation points, no fake scarcity. Thin day: [DATE, AREA, EXISTING STOPS]. Candidates: [FIRST NAME — WHY THEY ARE A FIT — one per line].

EXPECTED OUTPUT

A ranked fill list with a ready-to-send text per candidate.

Step time estimate: 20 minutes per thin day

WORKFLOW 14 OF 20

The Pre-Service Prep — What Customers Do Before We Arrive

A prompt that writes the pre-service prep message for each service type — what the customer should do before the tech arrives, stated as simple household tasks — so visits start on time and techs are not waiting on a cluttered garage.

Estimated time-to-run: 15 minutes per service type

14

ChatGPT or Claude, plus your per-service prep requirements (written by you, from your own process)

HOW TO INPUT

Step 1: **List your real prep needs.** For each service type, write what you actually ask customers to do: clear under sinks, move items from walls, secure pets, unlock gates, mow before a mosquito visit.

Step 2: **Replace the placeholders** — your real prep list per service; keep it to household tasks, never product or application instructions.

Step 3: **Send with the confirmation** — attach the prep message to the day-before confirmation for that service type.

PROMPT

You are an office coordinator writing pre-service prep instructions for a pest control customer. Turn the prep list below into a customer message under 120 words: a short intro line, then the prep tasks as a simple checklist, then one line on what happens if the prep is not done (we work around it, reschedule, or a return-visit note — state your real policy). Keep every task a plain household action — never include product names, chemical guidance, or application instructions. Tone: helpful, not bossy. Service: [SERVICE TYPE]. Prep list: [YOUR REAL PREP TASKS, e.g. CLEAR UNDER SINKS, SECURE PETS, UNLOCK GATE]. If-not-done policy: [YOUR REAL POLICY].

EXPECTED OUTPUT

A checklist-style prep message ready to attach to confirmations.

Step time estimate: 15 minutes per service type

WORKFLOW 15 OF 20

The 48-Hour Check-In — Post-Treatment Follow-Up

A prompt that writes the post-treatment follow-up message: what to expect after the visit, the honest timeline for results, and the simple reply path if activity continues — so customers are not left wondering and callbacks land in your inbox instead of a bad review.

Estimated time-to-run: 5 minutes per follow-up batch

15 ChatGPT or Claude, plus your completed-visit list and two-way texting or email

HOW TO INPUT

Step 1: **Pull the completed visits.** Two days after service, list the customers: first name, service performed, and the realistic result timeline you set for that pest.

Step 2: **Replace the placeholders** — service, timeline, and your callback policy (free re-treat terms you actually honor).

Step 3: **Send the check-ins** — text or email, and log any replies that need a callback.

PROMPT

You are an office coordinator following up after a pest control treatment. Write a check-in message under 80 words: thanks them by first name, states in one honest sentence what to expect by now for [PEST] (activity dropping, not necessarily zero – keep it truthful), gives the realistic full-result timeline, and asks them to reply if they are still seeing activity – with one line on our re-treatment policy stated exactly as we honor it. No guarantees invented, no fear language. Details: [FIRST NAME, SERVICE, PEST, REALISTIC TIMELINE]. Re-treatment policy: [YOUR REAL TERMS].

EXPECTED OUTPUT

A post-treatment check-in message ready to send two days after each visit.

Step time estimate: 5 minutes per follow-up batch

WORKFLOW 16 OF 20

The Referral Ask — Happy Customers Bring Neighbors

A prompt that writes the referral ask for your best customers — timed to a good outcome (a completed season, a solved problem, a 5-star review) — with a simple reward you actually offer, so your happiest accounts recruit the street.

Estimated time-to-run: 15 minutes to build, 5 minutes per send

16 ChatGPT or Claude, plus your list of happy, long-tenured customers

HOW TO INPUT

Step 1: **Pick the right customers.** Choose accounts with a clean history — long-tenured, paid up, no open complaints. Note first names and one genuine detail (their plan, their neighborhood).

Step 2: **Replace the placeholders** — your real referral reward (service credit, discount — only what you truly give).

Step 3: **Send after good news** — a completed season, a solved issue, or a fresh 5-star review.

PROMPT

You are an office manager asking a happy pest control customer for referrals. Write: (1) a referral text under 60 words — thanks them by first name, references the genuine detail (their plan or how long they have been with us), names the referral reward plainly, asks if they know a neighbor or friend who could use us; (2) a follow-up text for 7 days later — shorter, no pressure; (3) a one-line script for techs to use in person after a smooth visit. Rules: only promise the reward you truly give; never ask customers with open complaints or billing disputes. Details: [FIRST NAME, PLAN/TENURE DETAIL]. Referral reward: [YOUR REAL REWARD].

EXPECTED OUTPUT

A referral text, a 7-day follow-up, and a tech in-person script.

Step time estimate: 15 minutes to build, 5 minutes per send

WORKFLOW 17 OF 20

The Tech End-of-Day Summary — Field Day Into Office Brief

A prompt that turns a tech's rough end-of-day notes into a clean office brief: stops completed, callbacks needed, supplies running low, and anything the office should tell customers tomorrow — so the day's loose ends get handled before the next route rolls.

Estimated time-to-run: 10 minutes per tech per day

17

ChatGPT or Claude, plus the tech's end-of-day notes (voice memo transcript, app notes, or paper)

HOW TO INPUT

Step 1: **Collect the raw notes.** Have each tech jot or dictate: stops completed, anything unusual, callbacks requested, supplies low, and customer messages to relay.

Step 2: **Paste the notes and replace the placeholders** — first names only; keep it to the day's facts.

Step 3: **File the brief** — send to the office and flag the action items for tomorrow.

PROMPT

You are an office manager turning a pest control tech's end-of-day notes into a brief. Organize the notes below into four sections: (1) STOPS COMPLETED — the list, one line each; (2) CALLBACKS NEEDED — customer first name, issue, and how urgent it honestly is; (3) SUPPLIES LOW — what is running low (product categories only, no safety or mixing notes); (4) MESSAGES FOR THE OFFICE — anything customers said that the office should know or act on. End with the three most important items for tomorrow, numbered. Keep it factual and scannable. Raw notes: [TECH'S END-OF-DAY NOTES].

EXPECTED OUTPUT

A four-section daily brief with tomorrow's top three priorities.

Step time estimate: 10 minutes per tech per day

WORKFLOW 18 OF 20

The Inventory Notes Reader — Supply Notes Into Orders

A prompt that turns rough chemical and supply notes from the truck and the shelf into a clean order list: what is running low, what is on hand, and what to order — kept strictly to stock levels and ordering, never mixing, storage, or application guidance.

Estimated time-to-run: 15 minutes per inventory check

18 ChatGPT or Claude, plus your shelf and truck stock counts

HOW TO INPUT

Step 1: **Count and note.** Walk the shelf and the truck: product name, size on hand, and your reorder point for each. Note it plainly — counts only.

Step 2: **Replace the placeholders** — your real product list, counts, reorder points, and supplier.

Step 3: **Place the order** from the AI's list and file it with your records.

PROMPT

You are an office manager turning pest control inventory notes into an order list. Given the stock counts below, produce: (1) an ORDER NOW list — products at or below their reorder point, with quantity to order to reach a full stock level; (2) a WATCH list — products within one service cycle of their reorder point; (3) an OK list — everything else, one line each. Rules: counts and ordering only — never include mixing, storage, handling, or application notes; do not suggest substituting products. Stock: [PRODUCT NAME — ON HAND — REORDER POINT — FULL STOCK LEVEL — one per line]. Supplier: [SUPPLIER NAME].

EXPECTED OUTPUT

An order-now list, a watch list, and an OK list — ready to place the order.

Step time estimate: 15 minutes per inventory check

WORKFLOW 19 OF 20

The Annual Price Letter — Raising Plan Prices Without Losing Accounts

A prompt that writes the annual price-increase letter for your recurring plans: honest about the reason, plain about the new price and the effective date, and appreciative of the customer — so the increase lands as expected news, not a surprise on the invoice.

Estimated time-to-run: 20 minutes to build, 10 minutes per send batch

19 ChatGPT or Claude, plus your plan list with current and new prices and the effective date

HOW TO INPUT

Step 1: **Set the facts.** Your plan names, current prices, new prices, and the effective date. Decide the notice window you will honor (at least 30 days is standard practice).

Step 2: **Replace the placeholders** — real numbers, real dates, your real reason (costs, wages, fuel — whatever is true).

Step 3: **Send with notice** — email 30+ days before the effective date, and have the office ready for questions.

PROMPT

You are an office manager writing an annual price-increase letter for a pest control company's recurring plans. Write a letter under 150 words with four parts: (1) the thank-you — one genuine sentence of appreciation for their business; (2) the news — the old price, the new price, and the effective date, stated plainly; (3) the reason — one honest sentence (rising costs, wages, fuel — use only the true reason); (4) the close — what they need to do (nothing, if billing is automatic) and who to call with questions. Tone: direct and respectful, no groveling, no over-explaining. Plan: [PLAN NAME, OLD PRICE, NEW PRICE, EFFECTIVE DATE]. Reason: [YOUR TRUE REASON]. Contact: [NAME AND NUMBER].

EXPECTED OUTPUT

A price-increase letter ready to personalize per plan tier.

Step time estimate: 20 minutes to build, 10 minutes per send batch

WORKFLOW 20 OF 20

The Monthly Numbers Review — Recurring Revenue, Retention, Route Efficiency

A prompt that turns your own monthly reports into a plain-English business review: recurring revenue trend, account retention, and route efficiency — with three moves for next month, built only from numbers you actually have.

Estimated time-to-run: 30 minutes per month

20

ChatGPT or Claude, plus your monthly reports: active recurring accounts, revenue by service type, canceled accounts, and stops per tech per day (any software or spreadsheet)

HOW TO INPUT

Step 1: **Pull the month's numbers.** Active recurring accounts at month start and end, recurring vs. one-time revenue, canceled accounts with reasons if known, and average stops per tech per day.

Step 2: **Replace the placeholders** — aggregate figures only, no customer-level data.

Step 3: **Act on the findings** — price moves, retention calls, route changes.

PROMPT

You are a no-nonsense business advisor reviewing a pest control company's month. Given the numbers below, write: (1) a recurring-revenue read — active accounts start vs. end, what changed, and the one-line verdict on retention; (2) a route-efficiency read — average stops per tech per day, and one concrete change that would tighten routes next month; (3) three specific moves for next month — concrete, e.g. "call the 12 canceled rodent accounts" not "improve retention". Base everything only on the numbers given — do not invent costs, margins, or industry benchmarks; if a number is missing, say so instead of guessing. Numbers: [ACTIVE RECURRING ACCOUNTS START/END, RECURRING REVENUE, ONE-TIME REVENUE, CANCELED ACCOUNTS + REASONS]. Stops per tech per day: [AVERAGE]. Month-over-month trend: [UP/FLAT/DOWN + NOTE].

EXPECTED OUTPUT

A recurring-revenue read, a route-efficiency read, and three concrete moves for next month.

Step time estimate: 30 minutes per month

Your AI stack

Every playbook ends with the stack — the minimal set of subscriptions this work actually requires, and the ones to skip. AI subscription confusion is a real adoption barrier: too many tools, overlapping jobs, money leaking every month to dashboards nobody opens. Here is the honest minimum for a pest control company.

What you need

One AI assistant subscription. This is the machine you author with: the one that drafts your service narratives, renewal letters, and follow-up messages, and does the “figuring out” before anything goes to the customer. ChatGPT or Claude — pick the one you actually open every day. One, not both. The test is usage: if you open it daily, it earns its place; if you open it monthly, it doesn’t.

Your scheduling software — the one you already pay for. FieldRoutes, PestPac, or similar. The workflows in this book are written for its routing, its recurring-service schedules, and the customer communications already inside it — not around them. This is not a new subscription; it is a job for a tool you own.

What to skip

A second, overlapping AI subscription. Two assistants doing the same authoring job is paying twice for one job. Pick one and commit.

A paid AI add-on layered on your scheduling software until it earns its keep. If the assistant plus the communications already in your system covers follow-up, renewals, and review asks, the add-on is redundant until your own numbers prove otherwise.

Anything sold as “AI” that you can’t assign a weekly job. The standing test for every subscription: name the job it does each week. If you can’t name it, cancel it. Check quarterly — stacks grow back like weeds.

The minimal stack

NEED: - ONE AI assistant subscription (ChatGPT or Claude) — pick the one you open daily; this is what you author with - Your existing scheduling software (FieldRoutes, PestPac, or similar) — routing, recurring schedules, and customer communications you already pay for

SKIP: - A second overlapping AI subscription — paying twice for one authoring job - Paid AI add-ons for your scheduling software until your numbers prove the need - Anything you can’t assign a weekly job — name its job each week, or cancel it

Review quarterly. Stacks grow back like weeds.

Thank you

Thank you for reading — and for doing the unglamorous part. Writing the service note the customer actually reads, following up on the renewal that lapsed, showing up when you said you would: none of it is exciting. All of it is the difference between a company customers keep and one they replace.

If this book has a single sentence, it is the one SkillForge AI was built on: we don't lie, we don't steal, we offer value. Describe only what was actually done on the visit. Send follow-ups worth receiving. Charge only fees your policy truly charges — and when you find a claim you can't prove, either prove it or remove it the same day. The AI will make you fast. The ethic is what makes you worth buying from.

Go run your next workflow like it matters. Because it does.
