

Real Estate AI Playbook

Trade-specific AI prompts, workflows, and templates

SkillForge AI | Edition 1.0 | 2026

1. Who this playbook is for

Solo agents, small teams, and independent brokerages -- the people whose day splits between the car, the kitchen table, and the inbox. Whether you run a sphere of past clients, list 20 homes a year, or manage a team of 10 agents, this playbook adds AI to the tool belt you already carry without making anyone a "tech person" to benefit.

You already use a phone, a CRM (kvCORE, Follow Up Boss, Lofty, Real Geeks, HubSpot, etc.), the MLS, DocuSign or Dotloop, and probably a Canva or social scheduler. This playbook drops AI next to those tools so the prompts get used, not bookmarked.

Not a coding guide. Not a generic prompt dump. Every prompt in this playbook was written for the exact moment an agent hits it -- a Zillow lead at 8am, a listing appointment at noon, a contract contingency with a 48-hour clock, a past client whose neighbor is thinking about selling.

2. The three-step workflow

1. Pick the workflow below that matches what is in front of you today.
2. Open the matching prompt block. Replace the brackets [LIKE_THIS] with the buyer, listing, transaction, or neighborhood you actually have.
3. Paste into your AI tool (ChatGPT, Claude, Gemini -- any of them work) and use the output as a starting draft. Edit for tone, your local market, your brokerage voice. AI gives you a draft, you sign the message.

3. Workflow: Inbound lead response (first 60 seconds)

The data is consistent across Zillow, Realtor.com, and Facebook lead programs: response speed is the single biggest predictor of whether a fresh lead converts. Aim to send a personalised reply inside one minute. Two prompts that keep you honest about that standard.

Prompt -- Zillow / Realtor.com / website lead triage

You're a real estate assistant. A new lead just submitted an inquiry about [PROPERTY ADDRESS or AREA]. Their message reads: [PASTE INQUIRY MESSAGE HERE] Reply class: pick one of HOT / WARM / NURTURE based on budget signal, timeline, and pre-approval status. Draft a 4-sentence reply that: -

Acknowledges the specific property or area they asked about (not generic "thanks for reaching out") - Asks ONE qualifying question (pre-approval status, timeline, or current living situation) - Offers a specific next step (a 15-minute call OR a curated list of 3 similar listings OR a request for pre-approval) - Confirms the best channel to reach them (call, text, or email) - Signs off with my name, brokerage, and direct phone
Tone: warm-professional, not salesy. Plain ASCII only -- no emojis, no exclamation points.

Prompt -- Cold Facebook / Google ad lead reactivation

A lead came in from a Facebook or Google ad in the last 24 hours but never replied to my initial outreach. They were tagged [AD_SOURCE -- buyer-seller-listing / open-house / home-valuation / market-report]. Original inquiry: [PASTE ORIGINAL INQUIRY OR FORM FIELDS] Draft a 3-touch reactivation sequence: - Touch 1 (Day 1): one sentence of value, no pitch -- a local insight or a check-in - Touch 2 (Day 4): a soft "is this still on your radar?" with one open-ended question - Touch 3 (Day 10): a graceful close -- "if the timing is not right, no pressure -- reply with one word and I'll close the file" Each touch under 120 words. No emojis. Sign off the same way each time.

4. Workflow: Listing prep

Three high-leverage drafts you write for every listing. Keep these prompts in a notes file so you fire them in seconds, not minutes -- the time-to-MLS is what wins the photos-to-showings race.

Prompt -- MLS listing description

Write an MLS listing description for [PROPERTY ADDRESS]. Facts: - [BEDS] beds / [BATHS] baths / [SQUARE FEET] sq ft - Built [YEAR] - Lot size: [LOT SIZE] - Notable features: [BULLET LIST OF 3-5 FEATURES -- kitchen, primary suite, outdoor, light, layout] - Neighborhood: [NEIGHBORHOOD NAME] -- known for [2-3 DESCRIPTORS] - HOA: [YES / NO -- AMOUNT IF YES] - School district: [DISTRICT NAME] - Recent updates: [LIST -- roof 2022, HVAC 2021, etc.] Target buyer: [FIRST-TIME / MOVE-UP / DOWNSIZER / INVESTOR] Constraints: - 250-400 words - No superlatives without proof (don't say "stunning" unless you can say why) - Lead with the single most marketable fact - End with one emotional close that ties to how the buyer will live there - Avoid industry cliches: "must-see," "won't last," "hurry" - Plain ASCII only

Prompt -- Social media post (Instagram / Facebook / LinkedIn)

Turn the following MLS description into a 3-paragraph social caption for [PLATFORM]: [PASTE MLS DESCRIPTION] Hook (first line): a question, surprising fact, or neighborhood reveal -- NOT the address. Middle: the 3 most photogenic features, ordered for a scroll-stopper. Close: one clear call to action (DM / link in bio / save this post / comment for a comp). Add 5-7 relevant hashtags at the end, including 1 hyperlocal tag for [NEIGHBORHOOD/CITY] and 1 that names the local broker / school district. Plain ASCII only.

Prompt -- Email blast to sphere

Write a short email (under 180 words) to my past-client sphere announcing my new listing at [ADDRESS]. Include: - The single best feature that will resonate with past buyers - The list price and one stat that

frames the value (price per sq ft, days-on-market comp, year-over-year appreciation in this zip) - A clear ask: "If you know anyone thinking about buying or selling in [AREA], I'd love an introduction" Subject line: write 3 options, leading with curiosity over the address. Tone: warm, conversational, no marketing language. Sign off as a human, not a broker brand.

Prompt -- Just-listed / just-sold social proof card

Write a 3-sentence just-listed or just-sold social card for my latest transaction. Type: [JUST LISTED / JUST SOLD / PENDING / PRICE IMPROVEMENT] Address: [PROPERTY ADDRESS] -- neighborhood: [NAME] Key stat: [PRICE / PRICE-PER-SQFT / DAYS-ON-MARKET / SALE-TO-LIST RATIO] Card structure: - Line 1: lead with the stat, not the address - Line 2: name the buyer type or the standout feature (one phrase) - Line 3: a soft CTA -- "DM me if [CONDITION THAT TRIGGERS A REPLY]" Tone: confident-professional. No emojis. No exclamation points. Sign off my name + brokerage.

5. Workflow: Buyer & seller consultation prep

The listing appointment is the highest-leverage meeting of the year for that seller. These prompts turn a phone-call "are you interviewing agents?" into a structured consultation that closes at a higher rate.

Prompt -- Listing consultation prep brief

I'm meeting a seller at [ADDRESS] for a listing consultation. Create a one-page pre-meeting brief I can review in 5 minutes. Property: [PROPERTY ADDRESS] Seller names: [NAMES] Source of inquiry: [REFERRAL / ZILLOW / SPHERE / REPEAT CLIENT / FARM] Their stated motivation (from the inquiry notes): [PASTE 1-3 SENTENCES FROM THEIR INITIAL MESSAGE] Produce: - 3 questions they will likely ask in the first 5 minutes -- and my one-sentence response to each - 2 features of this home they may not realize are marketable - The single stat that anchors the price conversation (price-per-sqft vs. last 3 sold comps) - One specific objection they will raise ("my neighbor got more," "I do not need to stage," etc.) and a response that acknowledges without conceding Plain ASCII only. Under 300 words.

Prompt -- Buyer consultation -> matching plan

I'm meeting a buyer for a search consultation. Convert their stated criteria into a structured matching plan I can share with them after the meeting. Buyer names: [NAMES] Stated criteria from intake call: [PASTE: budget / areas / beds / baths / school district / commute / style preferences / timeline] Refinements I uncovered on the call: [PASTE NOTES] Produce: - 4 search buckets ranked by fit (best match / likely match / stretch / long-shot) - For each bucket: 2-3 specific neighborhoods / complexes that match - 2 open-ended questions I did not get to on the call but should answer before we tour - The first 3 recommended showing slots for the next 14 days Plain ASCII only. Under 350 words.

6. Workflow: Lead & client nurture cadence

The biggest leak in most agent workflows is the gap between activities. Once a lead is qualified, the next touchpoint should be on a calendar -- not in your head. This 6-touch and 90-day cadence keep

Prompt -- 6-touch 30-day lead nurture sequence

Design a 6-touch email nurture sequence for a [LEAD STAGE -- new-lead / open-house-attendee / referral / past-client] I met at [SOURCE]. Each email should be personal to a real estate journey, NOT a generic sales blast. Sequence: - Day 0: thank-you for meeting, recap their stated goal in their own words - Day 2: useful resource -- one local stat, one neighborhood tip, one rate/market insight - Day 7: light check-in -- "still on your timeline?" - Day 14: share a relevant listing or sold example anchored to their criteria - Day 21: ask for a 15-minute call with a specific time offer - Day 30: graceful break-up -- give them permission to pause without pressure Constraints: - Each email: 120-180 words - Subject line variations per email (3 options each) - One CTA per email, no more - Sign off as a human, not a brand - Plain ASCII only

Prompt -- 90-day past-client check-in cadence

Build a 90-day check-in cadence for a past client who closed on [ADDRESS] in [MONTH/YEAR]. Touch plan: - Day 7: thank-you + ask how move-in is going - Day 30: small housewarming nudge (one neighborhood restaurant recommendation, one local tip) - Day 60: light value-add -- one seasonal homeowner tip + one local market stat - Day 90: ask-for-intro moment -- "if you know anyone considering a move in [AREA], I'd love an intro" For each touch: - Under 130 words - Subject line (one option) - Tone: warm-professional, no push, no newsletter links - Sign off as a human, my name, direct phone - Plain ASCII only

7. Workflow: Transaction coordination

Vendor and client updates eat hours during a transaction -- and a single missed update is how a deal loses momentum. Three templates that pay for the playbook by week two.

Prompt -- Weekly transaction update (buyer)

Write a weekly update email for my buyer client on a transaction at [ADDRESS]. Today is [DATE]. Days to close: [N]. Pull from this checklist and only include items with a status update THIS week: - Inspection: [scheduled / completed / waived] - Appraisal: [scheduled / completed / waived] - Loan commitment: [date / pending / received] - Title work: [in progress / complete] - Closing disclosure: [sent / received / pending] - Walkthrough date: [DATE] Tone: confident and brief. Three short paragraphs + a bullet checklist of "next 7 days." End with the next step I should be doing. Sign off with my name and direct phone.

Prompt -- Weekly transaction update (seller)

Write a weekly update email for my seller client on a transaction at [ADDRESS]. Today is [DATE]. Days to close: [N]. Pull from this checklist and only include items with a status update THIS week: - Offer status: [active / pending / backup] - Inspection contingency: [open / cleared -- with summary] - Appraisal contingency: [open / cleared -- with summary] - Loan commitment: [date / pending / received] - Buyer walkthrough: [DATE] - Closing date: [DATE] Tone: confident-reassuring. The seller wants to know nothing is slipping. Three short paragraphs + a bullet checklist of next 7 days. End with the next step I should be doing. Sign off with my name and direct phone.

Prompt -- Vendor follow-up nudge

Draft a 2-sentence email to [VENDOR TYPE -- lender / inspector / title officer / escrow / listing photographer] nudging them on a transaction at [ADDRESS]. Reason for the nudge: [MISSED DEADLINE / NEED UPDATED DOCS / NEED CONFIRMATION / NEED SIGNED REVISION]. Tone: respectful, professional, specific. Include the new deadline I want. End with one line asking them to confirm receipt. Plain ASCII only.

Prompt -- Inspection response to seller with repair list

The inspection report on [ADDRESS] returned [N] items. Help me draft a buyer response that is firm on safety items, reasonable on cosmetic items, and clear about what we are conceding. Inspection items by category: - SAFETY: [LIST -- electrical, gas, structural, mold, etc.] - MAJOR SYSTEMS: [LIST -- HVAC, roof, water heater, plumbing] - COSMETIC: [LIST -- paint, scuffs, landscaping] Seller posture: [LIKELY TO REPAIR / LIKELY TO OFFER CREDIT / LIKELY TO DECLINE -- from listing conversation history] Produce: - The exact "we accept / we request / we decline" line per category - A redaction note: never copy the raw report verbatim -- reference paragraph numbers only - A signature line requesting a written response by [DATE] - Length: under 250 words. Plain ASCII only.

8. Workflow: Post-close nurture

Past clients are the highest-ROI source of future business. Most agents drop the ball here because there is no crisis to react to. The prompts below keep the relationship warm through year one and beyond.

Prompt -- Quarterly past-client check-in

Write a quarterly check-in email to a past buyer in [CITY / NEIGHBORHOOD]. They closed on [ADDRESS] in [MONTH / YEAR]. Include: - One local market insight that would matter to a homeowner (inventory, rates, a new amenity, a school note) - One homeowner-specific tip (seasonal maintenance, refinance window, equity update, hurricane prep, etc -- choose one for [CURRENT SEASON]) - A soft offer to help anyone they know who is considering a move Length: under 150 words. Plain ASCII only. No push. No newsletter links. Sign off with my name and direct phone.

Prompt -- Home-anniversary email (year-over-year)

Write a 1-year home-anniversary email for a past buyer who closed on [ADDRESS] on [MM/DD/YYYY]. Include: - A one-line reflection on their first year in the home - One small homeowner tip tied to the season - A soft ask: "If you know anyone considering a move in [AREA], I'd love an intro" Length: under 120 words. Plain ASCII only. Sign off personally.

9. Workflow: Objection handling

Top five objections you will hear this quarter -- each with a prompt that handles the real concern, not the surface one. After the script, a meta-prompt you can run for any objection that surprises you.

1. "I want to think about it" -- Run a "decision unblocker" prompt that drafts a 3-question reply to surface what is unresolved (timeline, partner, price expectation, competing priorities).
2. "Your commission is too high" -- Run a "value justification" prompt anchored to one concrete recent result AND one specific thing a discount broker is likely to miss.
3. "I will sell it myself" -- Run a "no-pressure response" prompt that gives them one free tip, acknowledges the decision, and leaves the door open (do not argue).
4. "I want to interview other agents" -- Run a "graceful compare" prompt that gives them the 4 questions to ask every agent, so a lower number still has to clear the same scope.
5. "I am not ready yet" -- Run a "long-lead nurture" prompt that drafts a 6-month low-touch check-in cadence with no pitch, to be the agent they remember when they ARE ready.

Prompt -- Draft a response to any real estate objection

A [BUYER / SELLER] just pushed back with this objection on a [TRANSACTION TYPE] conversation: "[PASTE OBJECTION -- in their words, as close to verbatim as possible]" Draft a 150-word response that:

- Acknowledges the objection without conceding the position
- Asks ONE clarifying question that surfaces the real concern
- Restates one specific anchor (a recent result, a market stat, or a brokerage process) that re-grounds the value
- Offers ONE next step (a 15-minute call, a 2nd opinion, a revised plan)

Tone: confident, not defensive. No marketing language. No emojis. Plain ASCII only. Sign off with my name and direct phone.

10. The 30/60/90 adoption plan

1. Week 1-2: Pick TWO prompts from sections 3 and 4. Use them daily. Time yourself -- aim for under 5 minutes per draft.
2. Week 3-4: Add sections 5 and 6 (consultation prep + nurture) for every new lead. Build each as a saved template in your CRM so the team can fire them without re-prompting.
3. Week 5-8: Layer in sections 7 and 8 (transaction and post-close). This is where 4-6 hours per week of admin time comes back. Track time saved vs. your previous workflow.
4. Week 9-12: Test section 9 prompts on your last 10 real objections. Quarantine any draft that feels off-brand; refine the prompt and re-test on the next 10.

11. House rules for AI in real estate

AI is a drafting tool, not a regulator. The rules below keep you compliant with brokerage, state, and federal frameworks while still letting you move faster.

- Never let AI send a client message under your name without reading it once. Drafts, not deliveries.
- Never paste client financial details (credit scores, full account numbers, full SSN, full bank statements, full loan documents) into a general-purpose AI tool. Use your CRM, lender portal, or a vaulted document system that has its own data-protection agreement.

- Always verify AI-generated market statistics against the local MLS, your brokerage data, or a named source before sending. AI is good at "this sounds plausible" -- it is NOT good at "this is the actual number for THIS zip as of THIS date."
- Fair Housing compliance: explicitly review every AI-drafted ad, listing, or social post against the Fair Housing Act (race, color, national origin, religion, sex, familial status, disability are protected classes). Ask your AI for a Fair Housing pass before posting.
- RESPA / lead-routing: never feed AI a lead that arrived through a co-marketing or lead-generation program whose contract restricts how the lead message is drafted. If a third-party vendor contract specifies templates, use their tooling instead.
- State real estate board rules vary on AI-generated advertising and client communications. Confirm with your brokerage compliance lead before letting AI send messages that include claims about properties, market performance, or your own credentials.
- Keep a manual log of every AI-assisted client touch for the first 90 days. Record: prompt version used, the input (with client PII redacted), the output as-sent, and the outcome. It is your audit trail and your prompt-tuning dataset.

12. FAQ / edge-case callouts

1. Q: We are a brokerage with multiple agents. Can each agent have their own prompt library? A: Yes -- and we recommend it. Build a per-agent library of saved prompts that match their voice and the client population they tend to serve. Review the library quarterly with the team lead.
2. Q: Our CRM / lead-program vendor offers an AI feature (auto-drafted replies, AI-scored leads) that overlaps with one of these prompts. A: Use the vendor feature for the steady-state drop-off task they already solved. Use the prompts in this playbook for the irregular tasks the vendor does not cover -- or for cases where you need to redact before the vendor tool will accept the input.
3. Q: We work in multiple MLS markets (different cities, different states). A: Run the same playbook structure in each market, but tune the inputs: comp source, school district reference, neighborhood descriptors, and local compliance rules. The shape is identical; the inputs differ.
4. Q: Some of our transactions are luxury (\$2M+) and the buyer pool is small. A: Adjust prompts 4 (listing prep) and 7 (transaction update) to lean into discretion, off-market positioning, and shorter copy. Luxury buyers do not want a 400-word MLS description -- they want one confident paragraph and a private showing window.

13. Tools

Four AI tools, ordered by the workflow stage you will hit them in: lead capture first, then the listing appointment, then transaction coordination, then post-close nurture. Pick the tool you already pay for; swap if it fails a tone test. Always verify AI output against your brokerage voice and Fair Housing

rules before it leaves your account.

Tool: ChatGPT

What it does.

Triages inbound Zillow, Realtor.com, Facebook, and website leads into a reply class (HOT / WARM / NURTURE) and drafts a personalised reply you can send in under 60 seconds, so a fresh lead never sits unanswered while you chase a tire-kicker.

Setup.

Open ChatGPT, turn on Custom GPTs in your account settings, and create a new GPT. Paste your typical buyer criteria summary (price band, areas you cover, minimum pre-approval standard), your last 5 sold comps, and your brokerage voice notes into the GPT instructions.

Ready-to-paste prompt

You're a real estate lead triage assistant. A new lead just submitted an inquiry about [PROPERTY ADDRESS OR AREA]. The source is [ZILLOW / REALTOR.COM / FACEBOOK / WEBSITE / OPEN-HOUSE-SIGN]. Lead notes (paste from the form or call): [PASTE LEAD NOTE: name, contact, what they asked, how they found you] Reply class: pick one of HOT / WARM / NURTURE based on: - Stated budget vs. any price signal in the message (HOT if budgeted and timing near-term) - Pre-approval status (HOT if pre-approved; WARM if "working on it"; NURTURE if not stated) - Timeline (HOT if 0-90 days; WARM if 3-6 months; NURTURE if exploratory) Draft the first reply text (under 120 words) appropriate to the class: - HOT: acknowledge immediately, give the 3 qualifying questions, offer a 15-minute call with 2 specific time options - WARM: confirm the criteria, propose a curated list of 3 listings, give the next 2 available showing slots - NURTURE: short thank-you, one open-ended question, no listing pitch Tone: warm-professional, no emojis, no exclamation points. Sign off with my name, brokerage, and direct phone.

Tool: Claude

What it does.

Drafts the listing-prep narrative paragraph and the 90-second seller walkthrough script in your voice, grounded in your last 5 sold comparables so the CMA conversation sounds like you, not a generic template.

Setup.

Create a new Claude project on the Sonnet 4.6 model. Paste your last 5 sold comparables into the project knowledge (address, list price, sale price, days on market, standout feature), then paste 2-3 of your past MLS descriptions to anchor your voice.

Ready-to-paste prompt

Write for a real estate listing at [PROPERTY ADDRESS]. Comparables to anchor tone and price framing: [PASTE 5 SOLD COMPS HERE -- columns: address / list price / sale price / days on market / standout feature] Produce two pieces in my voice (warm-professional, no emojis, no exclamation points): 1.

MLS-style listing-prep narrative paragraph (under 180 words). Lead with the single most marketable fact, name the buyer this home is for, and end with one line about how the buyer will live there. 2. 90-second seller walkthrough script (about 200 words) for the listing appointment. Open with one observation they do not hear from other agents. Walk room-by-room -- one standout feature per room. Close with the single stat that frames the price vs. last 5 comps. Avoid industry cliches ("must-see," "hurry," "won't last"). Plain ASCII only.

Tool: Gemini**What it does.**

Rewrites the past 14 days of client email into a single weekly follow-up digest grouped by stage (active / under contract / closed) so a 10-minute Monday review replaces 80 emails, and no client silently slips through the cracks.

Setup.

Enable Gemini in Google Workspace and grant it access to your Gmail. Create a saved prompt named "Weekly follow-up digest." Restrict the scope to the last 14 days of inbound and outbound traffic to clients only -- exclude vendors and marketing senders.

Ready-to-paste prompt

Scan my Gmail for the last 14 days and pull every email from a client (not a vendor, not a marketing sender). Group them into three buckets: - ACTIVE: clients touring or considering a property this month - UNDER CONTRACT: clients between contract and close - CLOSED: clients who closed in the last 30 days. For ACTIVE, draft one follow-up per client including a status-relevant next step and one open-ended question. For UNDER CONTRACT, draft the weekly update email for each. For CLOSED, draft the quarterly check-in opener. For every draft: under 150 words, no push, no emojis, sign off with my name and direct phone. Output as three labeled Markdown lists I can paste into my CRM.

Tool: Perplexity**What it does.**

Builds a 12-month past-client reactivation calendar grouped by neighborhood and anniversary month, with footnoted local-market sources so the touchpoints look researched instead of templated -- the past client who never hears from you is the past client recommending someone else.

Setup.

Open Perplexity Pro. Connect it to your CRM contact export (CSV with columns: client_name, close_date, address, neighborhood, last_contact_date). Save this prompt as a saved search so it produces a fresh calendar each quarter.

Ready-to-paste prompt

Build a 12-month past-client reactivation calendar for my closed clients. Use the CRM contact export I just uploaded (columns: client_name, close_date, address, neighborhood, last_contact_date). For each month

(Jan through Dec) produce: - A table with one row per past client who is due for a touch (grouped by neighborhood for batching) - The recommended touch type (quarterly check-in / home-anniversary / seasonal tip / market update / referral ask) - The subject line of the email (under 60 characters) - The body opener that references either their close_date or a current local market fact about their neighborhood -- footnoted with a source URL Constraints: - One email per client per quarter maximum (no spam) - Body openers reference their original transaction ("It's been 6 months since we closed on [ADDRESS]...") - Sign off as a human, not a brand - Never reproduce copyrighted news verbatim -- paraphrase the stat, link the source Output as one Markdown table I can paste into my CRM campaign tool.

Thank you for buying the SkillForge AI Real Estate Playbook.
