

The Roofers Playbook

Twenty AI workflows for roofing contractors — built for owners, sales reps, and office staff.

What's inside

Storm-lead triage, missed-call text-backs, and hail-map prospecting letters that keep the pipeline full after every storm

Insurance-claim packets, supplement documentation, and pre-adjuster briefs built from your real field notes and photos

Estimate follow-ups, kitchen-table financing talk-tracks, and aging-estimate reactivation that win more retail jobs

Aerial-to-scope notes, material order checklists, crew-day summaries, and HOA approval packets that keep production moving

Warranty registration, post-install handoffs, review and referral engines, plus a monthly numbers review that shows which jobs actually made money

12 months of free updates — every improvement ships to your inbox

WORKFLOW 01 OF 20

The Missed-Call Text-Back — Never Lose a Storm Lead to Voicemail

Storm season means missed calls — you're on a roof, the office is juggling adjusters, and every missed call might be a full replacement walking to a competitor. This prompt writes a missed-call text-back sequence that sounds like a person, not a robot: the instant reply, the one-hour nudge, and the next-morning check-in.

Estimated time-to-run: 10 minutes to set up

01

ChatGPT or Claude, plus texting from your business phone or CRM (AccuLynx, Jobber, or your phone system's auto-text)

HOW TO INPUT

Step 1: **Set the trigger.** Arrange for your phone system or CRM to send the first text automatically on every missed call from an unknown number — the AI writes the words, your system sends them.

Step 2: **Replace the placeholders** — your business name, the services you lead with (roof replacement, storm repair, inspections), and your real callback promise (for example, "we call back the same business day").

Step 3: **Assign the follow-up owner.** Texts two and three go out by hand from the office; log every reply back in the lead record so nothing falls through.

PROMPT

You are the office manager at a roofing company writing a missed-call text-back sequence. Write three texts: (1) the instant auto-reply — under 40 words, thanks them for calling, names the business, states exactly when a real person will call back ([CALLBACK PROMISE]), and asks one question — "is this about storm damage or something else?"; (2) the one-hour nudge if they do not reply — under 30 words, friendly, offers a free roof inspection by name; (3) the next-morning check-in — under 30 words, assumes they got busy, gives the office number once. Rules: no fake urgency, no discounts invented out of thin air, no claims about how fast a crew can start unless we know it is true. Business: [BUSINESS NAME]. Lead services: [ROOF REPLACEMENT, STORM REPAIR, INSPECTIONS]. Callback promise: [e.g. SAME BUSINESS DAY].

EXPECTED OUTPUT

Three ready-to-use texts: instant auto-reply, one-hour nudge, and next-morning check-in.

Step time estimate: 10 minutes to set up

WORKFLOW 02 OF 20

Storm-Call Triage — Sorting Active Leaks From "Just Curious"

After a storm the phones don't stop, and every lead feels urgent. This prompt turns your intake notes into a priority tier — active leak, visible damage, or just checking — with the qualifying questions to ask each caller, so inspections go to the real damage first and the office stops guessing.

Estimated time-to-run: 3 minutes per lead

02

ChatGPT or Claude, plus your CRM's lead or job record (AccuLynx, Jobber, or a shared intake sheet)

HOW TO INPUT

Step 1: Take the intake basics. For each storm caller, note: first name, neighborhood or cross-streets (never paste a full address into the AI), the storm date they mention, and what they see — water inside, missing shingles, granules in the gutters, or just "my neighbor got a new roof."

Step 2: Paste the intake notes and replace the placeholders — describe what the caller reported in their own words, as briefly as you can.

Step 3: Tier and schedule. Mark the lead tier in your CRM and book inspections tier-first: active leaks today, visible damage this week, just-curious callers get the inspection offer by text.

PROMPT

You are a roofing office manager triaging storm leads. For each caller below, do three things: (1) assign a tier — TIER 1 active water intrusion (water inside the home, sagging ceiling, active drip), TIER 2 visible exterior damage (missing or creased shingles, dented vents or gutters, heavy granule loss), TIER 3 just checking (no damage described, heard about the storm, neighbor referral); (2) write three qualifying questions tailored to what they reported — things like when they first noticed it, whether water is coming in right now, and whether they have filed an insurance claim; (3) write a one-line scheduling note: how fast we should get eyes on it and one reason. Keep every note plain and honest — never promise a claim will be approved. Callers: [FIRST NAME — NEIGHBORHOOD — STORM DATE MENTIONED — WHAT THEY REPORTED — one per line].

EXPECTED OUTPUT

A tiered lead list with tailored qualifying questions and a scheduling note per caller.

Step time estimate: 3 minutes per lead

WORKFLOW 03 OF 20

The Hail-Map Letter — Knock the Right Streets First

Canvassing every street after a storm wastes days. This prompt writes a door-hanger letter or mailer draft for the streets that actually got hit: the storm date, what was reported, and a plain-English offer of a free damage inspection — built only from storm details you can verify.

Estimated time-to-run: 20 minutes per storm event

03

ChatGPT or Claude, plus your storm data source (NOAA's public storm events database, a hail-report service you subscribe to, or verified local news coverage)

HOW TO INPUT

Step 1: **Verify the storm details.** Pull the storm date, the reported hail size or wind event, and the affected neighborhoods or zip codes — from a source you can stand behind. Never invent a hail size or date you cannot verify.

Step 2: **Replace the placeholders** — your business name, the verified storm facts, and the neighborhoods you will target.

Step 3: **Print or mail, then knock.** Use the letter as a door hanger or mailer, and send canvassers to the same streets within days, not weeks.

PROMPT

You are a marketer for a local roofing company writing a door-hanger letter after a verified storm. Write a one-page letter with: (1) a headline naming the storm date and what was reported — hail size or wind, exactly as verified, no exaggeration; (2) three short paragraphs — what that kind of storm typically does to a roof (bruised shingles, creased tabs, dented vents — described honestly, never as a scare tactic), what a free inspection covers, and how the insurance process works in plain terms without promising approval; (3) a clear call to action — call or text the number, inspections this week. Keep the whole letter under 200 words, neighborly tone, no fake deadlines. Storm facts: [DATE, REPORTED HAIL SIZE OR WIND EVENT, AFFECTED NEIGHBORHOODS OR ZIPS, SOURCE OF THE REPORT]. Business: [BUSINESS NAME]. Phone: [NUMBER].

EXPECTED OUTPUT

A one-page door-hanger letter draft naming the verified storm and offering a free inspection.

Step time estimate: 20 minutes per storm event

WORKFLOW 04 OF 20

From Aerial to Scope — Turning Roof Photos Into Real Scope Notes

Drone shots and aerial measurements are only useful if someone turns them into a scope. This prompt converts your roof photos (described in plain words) and measurements into clean scope notes — tear-off layers, decking call-outs, flashing, and ventilation — that a sales rep can paste straight into an estimate.

Estimated time-to-run: 15 minutes per roof

04

ChatGPT or Claude, plus your drone or aerial photos and measurements (EagleView, your drone app, or a tape-and-ladder takeoff)

HOW TO INPUT

Step 1: **Gather the field record.** Pull your measurements (squares, stories, pitch if known) and your photos. Describe each photo in one line for the AI — date taken, slope or area shown, what it shows. Keep homeowner names and full addresses out of the paste; describe the roof, not the customer.

Step 2: **Paste the descriptions and replace the placeholders** — measurements first, then the photo descriptions.

Step 3: **Paste the scope notes into your estimate** and have the rep verify every line against the actual photos before it goes to the homeowner.

PROMPT

You are a roofing estimator writing scope notes from field documentation. Given the measurements and photo descriptions below, write clean scope notes with: (1) tear-off — number of existing layers observed and the plan (full tear-off to deck); (2) decking — any soft spots, delamination, or damage noted, described as observed, never assumed; (3) flashing and penetrations — chimneys, walls, skylights, pipe boots: what needs new flashing versus what can be reused, based only on what the photos show; (4) ventilation — existing vents observed and whether the attic ventilation looks adequate or needs attention; (5) accessories — drip edge, ice and water shield, underlayment, starter, ridge cap. End with a "verify on site" list of anything the photos could not confirm. Plain trade English, no marketing language. Measurements: [SQUARES, STORIES, PITCH IF KNOWN]. Photo descriptions: [DATE — AREA OR SLOPE — WHAT IT SHOWS — one per line]. Current shingle type if known: [e.g. 3-TAB, ARCHITECTURAL, UNKNOWN].

EXPECTED OUTPUT

Structured scope notes — tear-off, decking, flashing, ventilation, accessories — plus a verify-on-site list.

Step time estimate: 15 minutes per roof

WORKFLOW 05 OF 20

The Retail Estimate Follow-Up — Day 2, Day 7, Day 14

Retail roof estimates go quiet for one reason: the homeowner is deciding, and nobody stays in front of them. This prompt writes a three-touch follow-up sequence matched to the estimate's age — a day-2 check-in, a day-7 value add, a day-14 direct ask — so no five-figure decision dies of silence.

Estimated time-to-run: 5 minutes per estimate

05

ChatGPT or Claude, plus your CRM's estimate or quote record (AccuLynx, Jobber, or your proposal file)

HOW TO INPUT

Step 1: **Pull the open estimates.** Note the homeowner's first name, the scope (full replacement versus repair), the shingle line quoted, the total, and how many days since the estimate was presented.

Step 2: **Paste the details and replace the placeholders** — first names only, never full addresses in the AI.

Step 3: **Send the touches on schedule** — text on day 2, email on day 7, direct ask on day 14 — and log every reply.

PROMPT

You are a roofing sales rep following up on an undecided estimate. Write three messages: (1) a day-2 text under 40 words – thanks them by first name, references the specific roof work quoted, one yes-or-no question about any questions on the shingle choice; (2) a day-7 email under 120 words – adds one genuinely useful detail (what install day looks like, how the crew protects landscaping, or the warranty summary – only real details about your process), ends with a soft ask; (3) a day-14 direct ask – polite and plain, asks whether they want to move forward or put it on hold, gives an easy out, no fake urgency and no invented discounts. Client first name: [FIRST NAME]. Scope: [FULL REPLACEMENT OR REPAIR + SHINGLE LINE]. Estimate total: [AMOUNT]. Days since presented: [NUMBER].

EXPECTED OUTPUT

Three ready-to-send follow-up messages matched to the estimate's age.

Step time estimate: 5 minutes per estimate

WORKFLOW 06 OF 20

The Kitchen-Table Financing Talk — Plain-English Payment Options

Nobody buys a roof with pocket change, and the financing conversation is where deals stall or close. This prompt writes a one-page financing explainer and a spoken script for the sales rep — honest, plain-English, and limited strictly to the payment options your company actually offers.

Estimated time-to-run: 20 minutes to build, 5 minutes per use

06

ChatGPT or Claude, plus your real financing or payment options (lender programs you offer, in-house payment plans, deposit and progress-payment terms)

HOW TO INPUT

Step 1: **Write down your real options.** List exactly what you offer — lender programs with their real terms, in-house plans, deposit amounts, and when final payment is due. If you do not offer financing, say so; the AI will write the deposit-and-payments version instead.

Step 2: **Replace the placeholders** — real program names, real terms, nothing invented. You are not the lender, and the copy must say so plainly.

Step 3: **Leave the one-pager with every estimate** and have the rep practice the 60-second script until it sounds natural.

PROMPT

You are a roofing sales manager writing a financing explainer for homeowners. Create: (1) a one-page explainer – a short intro stating plainly that [BUSINESS NAME] is not a lender, then each payment option as its own section: what it is, who it fits, the real terms ([PROGRAM NAME, TERM LENGTH, HOW TO APPLY]), in plain English with no jargon; (2) a 60-second spoken script for the rep – how to bring up payment options without pressure, ending with "which of these feels most comfortable to look into?"; (3) three honest answers to common questions – "will this affect my credit?", "what is due today?", "what if insurance covers part of it?" – answered only from the facts given. Rules: every term must come from the list below; never invent rates, approvals, or "everyone qualifies" language. Real options: [LIST EACH REAL OPTION WITH REAL TERMS]. Deposit policy: [DEPOSIT AMOUNT OR PERCENT + WHEN FINAL PAYMENT IS DUE].

EXPECTED OUTPUT

A one-page financing explainer, a 60-second rep script, and three honest Q and A answers.

Step time estimate: 20 minutes to build, 5 minutes per use

WORKFLOW 07 OF 20

The Aging-Estimate Wake-Up — Old Quotes, New Storm Season

Every roofer has a drawer of estimates that never signed — and every new storm season makes half of them relevant again. This prompt scores your aging estimates by likelihood to close and writes the reactivation message for each tier, so the old quotes get worked instead of forgotten.

Estimated time-to-run: 20 minutes per month

07

ChatGPT or Claude, plus your CRM's estimate or quote list (AccuLynx, Jobber, or your spreadsheet), sorted by date

HOW TO INPUT

Step 1: **Pull the aging estimates.** Filter for estimates presented 60 or more days ago with no decision. Note first name, scope, total, days since presented, and anything you remember — price objection, "waiting on insurance," timing.

Step 2: **Paste the list and replace the placeholders** — first names and the real reason each one stalled, as best you recall.

Step 3: **Work the list top-down** — text the warm ones, email the cold ones, close out the dead ones.

PROMPT

You are a roofing sales rep reactivating old estimates. For each estimate below, do three things: (1) score it — WARM (stalled on timing or insurance, recent contact), COOL (price objection, 6-plus months old), or DEAD (told us no, sold the house, 18-plus months silent); (2) for WARM and COOL estimates, write a reactivation text under 40 words that gives one genuine reason to talk now — the current season, a real schedule opening, or a real note about material lead times — only if it is true, and never a fake deadline; (3) for DEAD estimates, write a one-line goodbye that leaves the door open. Every message references the specific roof work quoted. Estimates: [FIRST NAME — SCOPE — TOTAL — DAYS SINCE PRESENTED — WHY IT STALLED — one per line].

EXPECTED OUTPUT

A scored reactivation list with a ready-to-send text per estimate and a clear work-or-close action.

Step time estimate: 20 minutes per month

WORKFLOW 08 OF 20

The Adjuster-Ready Claim Packet — Photos, Dates, Scope in One File

Adjusters approve what they can understand in five minutes. This prompt turns your field documentation — photo descriptions, measurements, storm date, and damage notes — into a clean one-page claim summary plus an organized photo log, so the file you hand over reads like a professional scope, not a shoebox of pictures.

Estimated time-to-run: 20 minutes per claim

08

ChatGPT or Claude, plus your job file photos and measurements (AccuLynx job file, your drone app, or a shared folder)

HOW TO INPUT

Step 1: **Assemble the file.** Gather the storm date, the claim number if one exists, your measurements, and your photos. Describe each photo in one line — date taken, slope or area shown, damage visible. Keep homeowner full names and addresses out of the AI paste.

Step 2: **Paste the claim details and replace the placeholders** — stick to what you observed and measured, never what you assume the adjuster will approve.

Step 3: **Attach the summary to your real photos** and include it in the packet you send or hand to the adjuster.

PROMPT

You are a roofing project manager assembling an insurance claim documentation packet. Using the details below, write: (1) a one-page claim summary – property type, roof age if known, storm date, claim number, a plain-English damage narrative (what was found, where, on which slopes), and the measured scope (squares, stories, pitch); (2) an organized photo log – a numbered table in text form: photo number, date taken, area or slope, what it shows; (3) a scope checklist of items for the adjuster to verify on site – tear-off layers, decking condition, flashing, ventilation, and accessories – each phrased as an observation to confirm, never as a demand. Rules: describe only what was observed; never state that damage is covered or that the claim will be approved; keep it factual and professional. Claim details: [STORM DATE, CLAIM NUMBER IF ANY, ROOF AGE IF KNOWN, SQUARES, STORIES, PITCH]. Damage narrative: [WHAT WAS FOUND, WHERE, IN PLAIN WORDS]. Photo descriptions: [NUMBER – DATE – AREA OR SLOPE – WHAT IT SHOWS – one per line].

EXPECTED OUTPUT

A one-page claim summary, a numbered photo log, and a site-verification checklist for the adjuster.

Step time estimate: 20 minutes per claim

WORKFLOW 09 OF 20

The Supplement Builder — Turn Denied Line Items Into Paid Ones

The first scope the carrier writes is rarely the last word — line items get missed, underpaid, or denied outright. This prompt turns each disputed line item into a documented supplement request: what was omitted, why it is required, and the evidence to attach — so your supplement reads like documentation, not an argument.

Estimated time-to-run: 15 minutes per line item

09

ChatGPT or Claude, plus the carrier's scope or estimate (Xactimate line items or the adjuster's summary) and your field photos and notes

HOW TO INPUT

Step 1: **List the disputed items.** For each denied, missing, or underpaid line item, note: the line item name, what the carrier allowed, and what the job actually requires.

Step 2: **Gather the evidence.** For each item, pull the photo descriptions, the code or manufacturer requirement it rests on, and any field measurement that proves the quantity.

Step 3: **Send the supplement** with the AI's documentation attached to your real photos — and log the outcome per line item so you learn what wins.

PROMPT

You are a roofing supplement specialist documenting disputed line items. For each item below, write a supplement entry with: (1) the line item and the gap — what the carrier's scope shows versus what the roof requires, stated as measured fact; (2) why it is required — the building code section, the shingle manufacturer's installation requirement, or the field condition (rotted decking, code-required ice and water shield, flashing that cannot be reused) — cite the real requirement by name, never invent a code section; (3) the evidence to attach — which photos, measurements, or documents prove it, referenced by your photo log numbers. Keep each entry factual and professional: document, do not argue. If a requirement cannot be verified, say so instead of guessing. Disputed items: [LINE ITEM — WHAT CARRIER ALLOWED — WHAT THE JOB REQUIRES — EVIDENCE AVAILABLE — one per line]. Code or manufacturer requirements you are citing: [LIST THE REAL ONES].

EXPECTED OUTPUT

A documented supplement entry per line item: the gap, the requirement, and the evidence to attach.

Step time estimate: 15 minutes per line item

WORKFLOW 10 OF 20

The Pre-Adjuster Brief — Walk In Prepared

The adjuster meeting decides the claim, and the contractor who shows up organized gets taken seriously. This prompt builds a one-page pre-adjuster brief: the claim facts, the damage story, the line items to walk, and the questions to ask — so your rep walks the roof with a plan instead of winging it.

Estimated time-to-run: 15 minutes per meeting

10

ChatGPT or Claude, plus your claim file — the claim packet from Workflow 08 and your supplement notes from Workflow 09

HOW TO INPUT

Step 1: **Pull the claim file.** Claim number, storm date, adjuster's name and appointment time, plus your damage narrative and the line items you expect to discuss.

Step 2: **Paste the details and replace the placeholders** — facts only, no speculation about what the adjuster will decide.

Step 3: **Print the brief** and hand it to whoever is meeting the adjuster — owner, sales rep, or project manager.

PROMPT

You are a roofing project manager preparing a rep for an adjuster meeting. Write a one-page brief with: (1) the claim facts — claim number, storm date, policyholder first name, adjuster name, meeting date and time; (2) the damage story in five bullets — what happened, where the damage is, which slopes are affected, in plain factual language; (3) the walk plan — the order to walk the roof, which photos to show first, and the three line items most likely to need discussion (from the supplement notes); (4) five questions to ask the adjuster — about the scope process, the timeline for the written estimate, and how supplements get submitted — professional, never adversarial. Rules: never coach the rep to argue, pressure, or misrepresent anything; the goal is a complete and accurate scope. Claim facts: [CLAIM NUMBER, STORM DATE, ADJUSTER NAME, MEETING DATE AND TIME]. Damage narrative: [PLAIN-ENGLISH SUMMARY]. Line items to discuss: [FROM YOUR SUPPLEMENT NOTES].

EXPECTED OUTPUT

A one-page adjuster-meeting brief: facts, damage story, walk plan, and five professional questions.

Step time estimate: 15 minutes per meeting

WORKFLOW 11 OF 20

The Material Order Checklist — Right Shingles, Right Accessories, One Delivery

A shorted delivery stalls a crew and burns a day. This prompt converts your measurements and scope into a complete supplier order checklist — shingles, starter, ridge cap, underlayment, ice and water shield, flashing, vents, and fasteners — with a waste-factor line and a count-verification pass, so the order goes in once and right.

Estimated time-to-run: 15 minutes per job

11

ChatGPT or Claude, plus your measurements and your supplier's cut sheet or coverage figures (ABC Supply, SRS Distribution, or your local yard)

HOW TO INPUT

Step 1: **Write down the job facts.** Squares, stories, pitch, shingle line and color, tear-off layers, and anything special — skylights, chimneys, valleys, low-slope sections.

Step 2: **Paste the facts and replace the placeholders** — use your supplier's real coverage figures for bundles per square and accessory coverage; the AI does the arithmetic, you supply the math it runs on.

Step 3: **Verify against the scope** — have the estimator or foreman sign off on the checklist before the order goes to the supplier.

PROMPT

You are a roofing production manager building a material order checklist. Given the job facts below, produce: (1) a line-by-line order list – field shingles (line, color, quantity in squares plus your waste factor), starter course, hip and ridge cap, synthetic underlayment, ice and water shield, drip edge, step and chimney flashing, pipe boots, vents, and nails – each with the quantity and the unit it is ordered in; (2) the arithmetic shown for each line – measurement times coverage figure, so anyone can check the math; (3) a verification pass – three questions that catch the usual misses (did we count the second layer of tear-off in the dumpster order, is the ridge vent length matched to the ridge cap, are pipe boot sizes matched to the actual pipe diameters). Rules: use only the coverage figures given below – never assume them; if a figure is missing, flag it instead of guessing. Job facts: [SQUARES, STORIES, PITCH, SHINGLE LINE AND COLOR, TEAR-OFF LAYERS, SPECIAL FEATURES]. Coverage figures from supplier: [BUNDLES PER SQUARE, STARTER COVERAGE, RIDGE CAP COVERAGE, UNDERLAYMENT ROLL COVERAGE, WASTE FACTOR PERCENT YOU USE]. Dumpster and delivery notes: [SIZE, DELIVERY DATE, DROP LOCATION].

EXPECTED OUTPUT

A verified line-by-line material order checklist with the arithmetic shown and a miss-catching verification pass.

Step time estimate: 15 minutes per job

WORKFLOW 12 OF 20

The Crew-Day Summary — The Office Knows Without Calling the Foreman

The foreman texts "done most of it, need more felt tomorrow" and the office has to decode it. This prompt turns the foreman's end-of-day shorthand into a clean daily log — progress, materials used, issues found, and what tomorrow needs — so the office, the homeowner, and the next day's crew all read the same page.

Estimated time-to-run: 5 minutes per day

12

ChatGPT or Claude, plus the foreman's end-of-day notes (text message, voice memo transcribed, or your crew app)

HOW TO INPUT

Step 1: **Get the foreman's raw notes.** Have the crew lead send a quick end-of-day update: what got done, what didn't, materials used, anything found (decking rot, extra layers, weather delay), and what's needed tomorrow.

Step 2: **Paste the notes and replace the placeholders** — the foreman's words verbatim, first names only.

Step 3: **File the summary in the job record** and forward tomorrow's needs to whoever orders materials.

PROMPT

You are a roofing production coordinator writing the daily job log. Turn the foreman's notes below into a clean crew-day summary with: (1) progress today — what was completed, stated plainly (e.g., "tear-off complete on the south slope, underlayment down"); (2) materials used — what went on the roof today; (3) issues found — decking damage, unexpected layers, weather, homeowner concerns — each with whether it changes the plan or the price, flagged honestly; (4) tomorrow's plan and needs — what the crew will do and what must be on site for them. Keep it under 150 words, plain trade English, no spin — if the day went badly, say so plainly so the office can respond. Foreman's notes: [PASTE VERBATIM]. Job: [CLIENT FIRST NAME — ADDRESS AREA OR JOB NUMBER — DAY NUMBER OF THE JOB].

EXPECTED OUTPUT

A clean daily log — progress, materials, issues, tomorrow's needs — ready to file in the job record.

Step time estimate: 5 minutes per day

WORKFLOW 13 OF 20

The HOA Approval Packet — Get the Yes Before You Order Shingles

Half of all suburban re-roofs touch an HOA, and a rejected application costs weeks. This prompt drafts the complete approval packet — the project description, the shingle specifications, the timeline, and the homeowner's cover letter — so the application goes in complete the first time.

Estimated time-to-run: 20 minutes per application

13

ChatGPT or Claude, plus the HOA's architectural guidelines or application form (get the real document — requirements vary by community)

HOW TO INPUT

Step 1: **Read the HOA's actual requirements.** Pull the architectural review guidelines or application form and note exactly what they ask for: color samples, contractor license, insurance certificate, project description, timeline.

Step 2: **Replace the placeholders** — the real shingle line, color name, and manufacturer, plus your real license and insurance details.

Step 3: **Submit the packet with the homeowner** — most HOAs require the homeowner's signature; give them the cover letter ready to sign.

PROMPT

You are an office coordinator preparing an HOA architectural review packet for a roof replacement. Draft: (1) the project description – one paragraph: full tear-off and replacement, the shingle manufacturer and line, the exact color name, and the install timeline ([START DATE] through [END DATE]); (2) a specifications list – shingle line, color, style (architectural or 3-tab), ridge cap, and a note that a physical color sample is enclosed; (3) the contractor credentials section – business name, license number, and insurance certificate enclosed, using the real details below; (4) the homeowner's cover letter – under 100 words, polite, states what is requested and that the color matches the community's approved palette (only if that is true – check the guidelines). Rules: never claim HOA pre-approval you do not have; if the guidelines restrict colors, say which requirement the chosen shingle satisfies. Project: [SHINGLE MANUFACTURER, LINE, COLOR NAME, STYLE]. Timeline: [START DATE – END DATE]. Contractor: [BUSINESS NAME, LICENSE NUMBER]. HOA requirements noted: [WHAT THE GUIDELINES ASK FOR].

EXPECTED OUTPUT

A complete HOA packet draft: project description, specifications, credentials, and homeowner cover letter.

Step time estimate: 20 minutes per application

WORKFLOW 14 OF 20

Warranty Registration Without the Paperwork Pile

Manufacturer warranties only protect the homeowner if someone actually registers them — and the paperwork dies in the truck. This prompt turns your job closeout details into a complete warranty-registration packet: everything the manufacturer's portal asks for, organized and ready to submit, plus the plain-English warranty summary the homeowner keeps.

Estimated time-to-run: 10 minutes per job

14

ChatGPT or Claude, plus the shingle manufacturer's warranty registration portal (GAF, Owens Corning, CertainTeed, and others each run their own contractor registration — use the one for the shingle you installed)

HOW TO INPUT

Step 1: **Collect the closeout facts.** Homeowner name, install address, install completion date, shingle manufacturer, line, and color, plus your contractor certification status and number if you hold one.

Step 2: **Replace the placeholders** — real product names, real dates, real warranty terms. Enter only the warranty level you are actually certified to offer; enhanced warranties require certified-contractor status, so never claim a tier you have not earned.

Step 3: **Submit through the manufacturer's portal** and file the confirmation with the job record; hand the homeowner summary to the customer.

PROMPT

You are an office coordinator registering a shingle warranty. Using the closeout facts below, produce: (1) a registration checklist — every field the manufacturer's portal will ask for, filled in from the facts: homeowner name, install address, completion date, shingle manufacturer, line, color, contractor name and certification number; (2) a plain-English homeowner warranty summary — what the manufacturer's warranty covers and for how long ([MANUFACTURER WARRANTY TERM]), what our workmanship warranty covers and for how long ([YOUR WORKMANSHIP TERM]), and what voids coverage (in the manufacturer's own terms, summarized honestly); (3) a filing note — where the confirmation gets stored and when to follow up if it has not arrived. Rules: use only the real terms below; never upgrade the warranty tier in writing; if the homeowner asks what "limited lifetime" means, the summary must explain it plainly. Closeout facts: [HOMEOWNER NAME, INSTALL ADDRESS, COMPLETION DATE, SHINGLE MANUFACTURER, LINE, COLOR, YOUR CERTIFICATION STATUS AND NUMBER]. Real warranty terms: [MANUFACTURER TERM — e.g. AS PRINTED ON THE WARRANTY; YOUR WORKMANSHIP TERM].

EXPECTED OUTPUT

A filled registration checklist, a plain-English homeowner warranty summary, and a filing note.

Step time estimate: 10 minutes per job

WORKFLOW 15 OF 20

The Post-Install Handoff — Thank-You, Warranty, and What Happens Next

The crew leaves, the dumpster rolls away, and the homeowner is left staring at a new roof with questions. This prompt writes the post-install handoff package: a genuine thank-you letter, the warranty summary in plain English, and simple maintenance guidance — the last impression that turns into reviews and referrals.

Estimated time-to-run: 10 minutes per job

15

ChatGPT or Claude, plus the job closeout facts (shingle line and color installed, warranty terms, completion date)

HOW TO INPUT

Step 1: **Pull the closeout facts.** What was installed, the warranty terms from Workflow 14, the completion date, and the homeowner's first name.

Step 2: **Replace the placeholders** — real product names, real warranty terms, nothing embellished.

Step 3: **Deliver the package** — email it the day after completion and leave a printed copy if you do a final walkthrough.

PROMPT

You are the owner of a roofing company writing to a homeowner the day after their new roof is complete. Write a handoff package with: (1) a thank-you letter under 120 words — genuine, names the crew lead, thanks them for trusting you with their home; (2) the warranty recap in plain English — the manufacturer's coverage ([MANUFACTURER TERM]) and our workmanship coverage ([YOUR WORKMANSHIP TERM]), what each covers, and who to call first if something looks wrong (us — always us first); (3) simple maintenance guidance — keep gutters clear, watch attic ventilation, call us (not a handyman) if a shingle ever looks out of place, and when to expect us to check in. Warm tone, no sales pitch, no asking for a review here (that comes separately). Job facts: [HOMEOWNER FIRST NAME, SHINGLE LINE AND COLOR, COMPLETION DATE, CREW LEAD FIRST NAME]. Warranty terms: [MANUFACTURER TERM, YOUR WORKMANSHIP TERM].

EXPECTED OUTPUT

A thank-you letter, a plain-English warranty recap, and simple maintenance guidance — ready to send.

Step time estimate: 10 minutes per job

WORKFLOW 16 OF 20

The Install-Day Review Engine — Ask While the Dumpster Is Still There

Nobody writes a review three months later. This prompt writes the review request sequence timed for maximum honesty — the day the crew wraps, while the homeowner is still admiring the new roof — plus the follow-ups and your replies to the reviews that land.

Estimated time-to-run: 20 minutes to set up, 5 minutes per review reply

16

ChatGPT or Claude, plus your review link (Google Business Profile) and texting or email from your CRM

HOW TO INPUT

Step 1: **Set the timing.** Trigger the first ask the afternoon the job completes — text beats email, and same-day beats next-week.

Step 2: **Replace the placeholders** — your business name, your review link, and the crew lead's first name so the ask feels personal.

Step 3: **Reply to every review** using the reply templates — especially the unhappy ones, fast and by name.

PROMPT

You are a marketing-minded office manager setting up review collection for a roofing company. Write: (1) the install-day review ask — a text under 160 characters, thanks them by first name, names the crew lead, one review link, no begging and no incentive offered (never pay for reviews); (2) a first follow-up for 3 days later — shorter, assumes they meant to; (3) a second follow-up for 7 days later — final, gracious, no guilt; (4) three review-reply templates — one for 5-star, one for 4-star, one for a negative review (acknowledge specifically, take it offline with a name and direct number, never argue in public). Business: [BUSINESS NAME]. Crew lead first name: [NAME]. Review link: [URL].

EXPECTED OUTPUT

An install-day review ask plus two follow-ups, and reply templates for 5-star, 4-star, and negative reviews.

Step time estimate: 20 minutes to set up, 5 minutes per review reply

WORKFLOW 17 OF 20

The Referral Ask — Turn One Happy Roof Into Two

The best roofing leads come from the house next door — the neighbors watched your crew work for two days. This prompt writes a referral request timed for one week after install, plus a neighbor door-hanger note, so the happy customer does your canvassing for you.

Estimated time-to-run: 10 minutes per job

17 ChatGPT or Claude, plus your CRM's completed-job list and texting or email

HOW TO INPUT

Step 1: **Pick the moment.** One week after completion — the roof is done, the yard is clean, the homeowner has told at least one neighbor already.

Step 2: **Replace the placeholders** — homeowner first name, neighborhood, and your referral reward ONLY if you genuinely offer one (if you don't, the prompt writes the no-reward version — never invent an incentive).

Step 3: **Send the ask and drop the door hangers** on the five nearest houses the same week.

PROMPT

You are a roofing company owner asking a happy customer for referrals. Write: (1) a referral request text under 60 words — thanks them by first name, notes the new roof is a week old, asks if any neighbors mentioned needing roof work, makes it easy ("just reply with a name and I'll take it from there"); (2) a neighbor door-hanger note under 80 words — "we just finished the roof at [STREET OR NEIGHBORHOOD, no house number], free inspections this week," with the phone number; (3) IF a real referral reward exists, one honest sentence describing it ([REWARD DETAILS]) — if none exists, write the ask with no reward mentioned at all. Rules: never invent a reward, never pressure, keep it to one ask. Customer: [FIRST NAME]. Neighborhood: [NAME]. Real referral reward (or "NONE"): [REWARD OR NONE].

EXPECTED OUTPUT

A referral request text and a neighbor door-hanger note — with the reward mentioned only if it is real.

Step time estimate: 10 minutes per job

WORKFLOW 18 OF 20

The Gutter & Siding Upsell — The Second Quote Hiding on Every Roof

You're already on the ladder, already looking at the whole exterior — gutters, fascia, siding, and skylights are all in view. This prompt turns what the crew actually observed into a clean add-on quote: the finding, the plain-English fix, and the words to say at the door — capturing work that used to need a second trip.

Estimated time-to-run: 10 minutes on site

18

ChatGPT or Claude, plus your phone's camera and your estimate template (AccuLynx, Jobber, or your proposal file)

HOW TO INPUT

Step 1: **Note what you actually saw.** When the rep or crew spots legitimate additional work — failing gutters, rotted fascia, hail-dented siding, fogged skylights — jot the finding and a rough price range.

Step 2: **Paste the finding and replace the placeholders** — describe only what was observed, with a real price range.

Step 3: **Build the add-on quote** before leaving the property and send it the same day.

PROMPT

You are a roofing sales rep writing up additional exterior work found while on site. Write: (1) a quote line-item description — 2 to 3 sentences, plain English, names the problem and the fix, no scare tactics; (2) a short spoken script for the rep — under 60 words — to explain it to the homeowner at the door, ending with "want me to price that while I'm here?"; (3) a follow-up text in case they want to think about it. Rules: describe only what was actually observed; never invent urgency; if it can honestly wait until later, say so. Finding: [WHAT WAS OBSERVED — e.g. GUTTERS, FASCIA, SIDING, SKYLIGHTS]. Recommended fix: [FIX]. Price range: [REAL RANGE].

EXPECTED OUTPUT

An add-on quote description, a door-side script, and a think-it-over text.

Step time estimate: 10 minutes on site

WORKFLOW 19 OF 20

The Storm-Season Blitz — One Campaign, Full Calendar

Twice a year the calendar decides your revenue: spring storm season and pre-winter inspections. This prompt turns your past-customer and old-lead list into a targeted seasonal campaign — who to contact, what to say, and in what order — so one afternoon of work fills next month's schedule.

Estimated time-to-run: 45 minutes per campaign

19

ChatGPT or Claude, plus your customer list export (AccuLynx, Jobber, or your spreadsheet) and your email or texting tool

HOW TO INPUT

Step 1: **Export and segment.** Pull your customer and lead list: past roof replacements, past repairs, old estimates that never closed, and inspection-only contacts. Group them by what they last bought and when.

Step 2: **Paste the segment summary and replace the placeholders** — counts and last-service types, not full customer records; keep full addresses and personal details out of the AI.

Step 3: **Send in order** — past customers first (they already trust you), then old estimates, then cold leads.

PROMPT

You are a marketer for a roofing company planning a seasonal campaign. Given the segments below, write: (1) one campaign message per segment — a text under 40 words or an email under 120 words, one clear offer tied to the season, one call to action; (2) a send order — which segment gets it first and why; (3) a subject line or opening line alternative for each. The two seasonal angles: SPRING STORM SEASON — free post-winter/storm damage inspections, timed to the storms your area actually gets; PRE-WINTER — roof and gutter checkups before freeze, ice-dam prevention framed honestly (an inspection finds vulnerabilities; it does not guarantee no ice dams). Rules: every offer must be real and bookable; no fake deadlines ("offer ends Friday" unless it truly does); neighborly tone, never salesy. Segments: [SEGMENT NAME — WHO THEY ARE — COUNT, e.g. "Past replacements, 3+ years ago — 210"]. Season: [SPRING STORM SEASON OR PRE-WINTER]. Real offer: [OFFER].

EXPECTED OUTPUT

One message per segment with alternates, plus a send order — ready to send.

Step time estimate: 45 minutes per campaign

WORKFLOW 20 OF 20

The Monthly Numbers Review — Which Jobs Actually Made Money

Revenue lies; the monthly review tells the truth. This prompt turns your month's raw numbers — estimates sent, close rate, average ticket, installs completed, supplement dollars recovered, lead sources — into a plain-English review: what earned, what bled, and the three moves for next month.

Estimated time-to-run: 30 minutes per month

20

ChatGPT or Claude, plus your CRM's reports or your own books (AccuLynx reporting, Jobber Insights, QuickBooks, or your spreadsheet) — aggregate numbers only

HOW TO INPUT

Step 1: **Pull the month's numbers.** Estimates sent, estimates closed, average job ticket, installs completed, supplement dollars approved, and leads by source — totals and counts, no customer-level data.

Step 2: **Paste the numbers and replace the placeholders** — your real figures; the AI works only from what you give it.

Step 3: **Act on the findings** — assign each of the three moves to a person and a date.

PROMPT

You are a no-nonsense business advisor reviewing a roofing contractor's month. Given the numbers below, write: (1) a plain-English read of the month in three sentences — what went right, what slipped, versus last month; (2) a ranking of lead sources by jobs closed with a one-line verdict each (double down, keep, or cut) — using only the numbers given, and saying so when a source has too few leads to judge; (3) three specific moves for next month — concrete, e.g. "call every aging estimate over 90 days" not "improve follow-up" — each with an owner (owner, sales rep, office) and a done-by date; (4) one red flag to watch. Base everything only on the numbers provided — do not invent costs, margins, or industry benchmarks. Numbers: [ESTIMATES SENT, ESTIMATES CLOSED, AVERAGE TICKET, INSTALLS COMPLETED, SUPPLEMENT DOLLARS APPROVED, MONTH-OVER-MONTH NOTE]. Leads by source: [SOURCE — LEADS — JOBS CLOSED — one per line].

EXPECTED OUTPUT

A three-sentence month read, a ranked lead-source verdict, three owned moves, and one red flag.

Step time estimate: 30 minutes per month

Your AI stack

Every playbook ends with the stack — the minimal set of subscriptions this work actually requires, and the ones to skip. AI subscription confusion is a real adoption barrier: too many tools, overlapping jobs, money leaking every month to dashboards nobody opens. Here is the honest minimum for a roofing contractor.

What you need

One AI assistant subscription. This is the machine you author with: the one that drafts your estimate narratives, adjuster documentation, and follow-up sequences, and does the “figuring out” before anything goes to the homeowner. ChatGPT or Claude — pick the one you actually open every day. One, not both. The test is usage: if you open it daily, it earns its place; if you open it monthly, it doesn’t.

Your roofing software — the one you already pay for. AccuLynx, Jobber, or similar. The workflows in this book are written for its estimates, its production tracking, and its photo documentation — not around them. This is not a new subscription; it is a job for a tool you own.

What to skip

A second, overlapping AI subscription. Two assistants doing the same authoring job is paying twice for one job. Pick one and commit.

A paid AI add-on that duplicates a job the assistant plus your existing software already covers. Estimate follow-up, review asks, and reminders are handled by this book’s workflows without it — until your own numbers prove otherwise.

Anything sold as “AI” that you can’t assign a weekly job. The standing test for every subscription: name the job it does each week. If you can’t name it, cancel it. Check quarterly — stacks grow back like weeds.

The minimal stack

NEED: - ONE AI assistant subscription (ChatGPT or Claude) — pick the one you open daily; this is what you author with - Your existing roofing software (AccuLynx, Jobber, or similar) — estimates, production tracking, and photo documentation you already pay for

SKIP: - A second overlapping AI subscription — paying twice for one authoring job - Paid AI add-ons that duplicate jobs this book’s workflows already cover - Anything you can’t assign a weekly job — name its job each week, or cancel it

Review quarterly. Stacks grow back like weeds.

Thank you

Thank you for reading — and for doing the unglamorous part. Documenting the roof honestly, following up on the estimate that went quiet, telling the homeowner what the adjuster actually said: none of it is exciting. All of it is the difference between a contractor homeowners trust and one they warn their neighbors about.

If this book has a single sentence, it is the one SkillForge AI was built on: we don't lie, we don't steal, we offer value. Document only what you actually observed. Send follow-ups worth receiving. Use only real program terms when financing comes up — and when you find a claim you can't prove, either prove it or remove it the same day. The AI will make you fast. The ethic is what makes you worth buying from.

Go run your next workflow like it matters. Because it does.
