

The Veterinarians Playbook

Twenty AI workflows for veterinary practices — built for owners, veterinarians, and clinic staff.

What's inside

Visit documentation and discharge paperwork: SOAP-note drafting, plain-language discharge instructions, and pre-surgical instruction sheets

Revenue recovery: estimate conversations, payment-plan explanations, missed-appointment win-back, and review generation

Proactive care outreach: vaccine recalls, senior-pet wellness, refill reminders, and post-op check-ins

Clinic operations: inventory reorders, staff meeting agendas, and a monthly numbers review

Client education and marketing: dental education, care handouts, lab-result letters, and social content from real clinic stories

12 months of free updates — every improvement ships to your inbox

WORKFLOW 01 OF 20

The SOAP-Note Draft — Dictate Messy, File Clean

A prompt that turns your shorthand visit notes into a draft SOAP note (Subjective, Objective, Assessment, Plan) in your practice's format — so you stop charting at 8 PM. AI drafts; a veterinarian reviews and approves every note before it enters the medical record.

Estimated time-to-run: 3 minutes per visit

01

ChatGPT or Claude, plus your practice management software's medical record entry (ezyVet, DaySmart Vet, or similar)

HOW TO INPUT

Step 1: Jot your raw notes. After the exam, write or dictate a few lines: presenting complaint, exam findings, diagnostics, your assessment, and the plan — shorthand is fine.

Step 2: Paste the notes and replace the placeholders — use the pet's name and species only; never paste full client contact details.

Step 3: Review and approve. Read the draft against your findings, correct anything the AI inferred wrong, and only then file it — this is your legal record.

PROMPT

You are a veterinary scribe drafting a SOAP note — you are NOT diagnosing or treating. Organize my notes below into Subjective (owner-reported history), Objective (exam findings and vitals, verbatim), Assessment (my stated diagnosis/differential only — do not add diagnoses I did not state), and Plan (my stated next steps only). Use concise clinical language, list vitals as given, and leave any field I did not cover blank rather than inventing it. End with "REVIEW REQUIRED: verify all findings before filing." Pet name and species: [NAME, SPECIES/BREED]. My raw notes: [PASTE NOTES].

EXPECTED OUTPUT

A structured draft SOAP note with blank fields where you left gaps, flagged for veterinarian review.

Step time estimate: 3 minutes per visit

WORKFLOW 02 OF 20

Discharge Instructions Clients Actually Follow

A prompt that rewrites your after-visit instructions into plain, warm language at a sixth-grade reading level — dosing schedules, recheck dates, and red-flag symptoms in bold — so clients follow through instead of calling confused at 9 PM.

Estimated time-to-run: 5 minutes per discharge

02

ChatGPT or Claude, plus your practice management software's discharge template (ezyVet, DaySmart Vet, or similar)

HOW TO INPUT

Step 1: **Note the essentials.** After the exam, list: diagnosis in your words, each medication with dose and frequency, activity restrictions, recheck date, and what would warrant an urgent call.

Step 2: **Paste the essentials and replace the placeholders** — pet name and client first name only.

Step 3: **Review and approve.** A veterinarian reads the draft for accuracy — doses, dates, and red flags — before it goes home with the client.

PROMPT

You are a veterinary nurse writing take-home instructions for a worried pet owner. Rewrite the clinical notes below as: (1) a 2-sentence plain-English summary of what is going on; (2) a medication table – medication name, how much, how often, with food or not, and for how many days; (3) what to do and not do over the next [DAYS] (activity, feeding, wound care); (4) three "call us right away" red flags specific to this condition. Plain words only – no medical jargon without a definition. End with the recheck date and our phone number. You are drafting only; the attending veterinarian verifies all medical content before this goes to a client. Clinical notes: [DIAGNOSIS, MEDICATIONS, RESTRICTIONS, RED FLAGS, RECHECK]. Pet name: [NAME]. Clinic phone: [PHONE].

EXPECTED OUTPUT

A one-page discharge sheet ready for veterinarian review, then the client's hands.

Step time estimate: 5 minutes per discharge

WORKFLOW 03 OF 20

The Recall Engine — Vaccines Due and Annual Exams

A prompt that turns your vaccine-due and overdue-exam list into a segmented recall campaign — text, email, and call scripts matched to how overdue each pet is — so wellness visits fill themselves.

Estimated time-to-run: 30 minutes per month

03

ChatGPT or Claude, plus your practice management software's reminder or recall list

HOW TO INPUT

Step 1: **Pull the due list.** Export or filter patients due or overdue for vaccines, annual exams, or parasite testing. Group into three tiers: due this month, 1-3 months overdue, 3+ months overdue.

Step 2: **Copy the tier summaries and replace the placeholders** — pet first names, service due, and months overdue; no client-level data in the AI.

Step 3: **Send in tiers** — text the "due this month" tier, email the middle tier, and personally call the long-overdue tier.

PROMPT

You are the front desk manager at a veterinary clinic running a recall campaign. Write: (1) a text under 40 words for the DUE THIS MONTH tier — names the pet, names what is due, one booking ask; (2) an email under 100 words for the 1-3 MONTHS OVERDUE tier — warm, names what lapsed, one health reason not to skip it; (3) a call script under 60 words for the 3+ MONTHS OVERDUE tier — caring, no guilt, offers to book on the spot. No scare tactics, no invented health claims — state only the actual service due. Examples: [PET NAME — SERVICE DUE — MONTHS OVERDUE, 2-3 examples per tier]. Clinic name and booking number: [NAME, PHONE].

EXPECTED OUTPUT

A tiered recall script set: text, email, and call script, ready to run monthly.

Step time estimate: 30 minutes per month

WORKFLOW 04 OF 20

The Estimate Conversation — Say the Big Number Without the Sticker Shock

A prompt that turns a treatment estimate into a calm, options-based client conversation: what it costs, why each item is there, and what happens if they wait — so you present honestly and they decide with confidence.

Estimated time-to-run: 10 minutes per estimate

04

ChatGPT or Claude, plus your practice management software's estimate printout

HOW TO INPUT

Step 1: **List the real items.** From your estimate: procedure name, each line item with price, what is optional vs. required, and the total.

Step 2: **Paste the line items and replace the placeholders** — real prices only; never invent costs or financing terms.

Step 3: **Review before the conversation.** A veterinarian confirms the medical necessity framing is accurate, then you present it to the client.

PROMPT

You are a veterinarian helping me talk a client through a treatment estimate — you are drafting talking points, not diagnosing. Write: (1) a 60-word opening that states the total plainly and frames the conversation around options, not pressure; (2) a plain-English explanation of each line item — what it is and why it is needed, required vs. optional clearly labeled; (3) an honest "what if we wait" paragraph — only real medical consequences I have noted, no exaggeration; (4) a closing question that invites their decision without pushing. Total: [AMOUNT]. Line items: [ITEM — PRICE — REQUIRED/OPTIONAL]. Procedure: [PROCEDURE]. Pet name: [NAME].

EXPECTED OUTPUT

A structured estimate conversation script, reviewed by the veterinarian before use.

Step time estimate: 10 minutes per estimate

WORKFLOW 05 OF 20

The Review Engine — 5-Star Reviews After Every Visit

A prompt that writes your review-request copy and drafts replies to the reviews you get — timed for the visit's glow, not the lobby — so your online reputation grows visit by visit.

Estimated time-to-run: 20 minutes to set up, 5 minutes per review reply

05

ChatGPT or Claude, plus your practice management software's reminder system or email/text tool

HOW TO INPUT

Step 1: **Pick your timing.** Send the review ask 24-48 hours after a visit — after the pet is home and settled, not in the parking lot.

Step 2: **Replace the placeholders** — your review link, clinic name, and the services you want named.

Step 3: **Reply to every review** using the reply drafts — especially the negative ones, fast and human.

PROMPT

You are a marketing-minded practice manager setting up review collection. Write: (1) the review ask — a text under 160 characters, thanks them by first name, names the pet and the visit type, one link, no begging; (2) one follow-up text for 3 days later — shorter, assumes they meant to; (3) three reply templates — a 5-star reply (thanks them, names the pet), a 4-star reply (thanks them, invites feedback on the missing star), and a negative-review reply (acknowledge, take it offline, give a name and number — never argue or discuss the case publicly). Clinic: [CLINIC NAME]. Review link: [URL]. Visit types to name: [WELLNESS VISIT, DENTAL, SURGERY, etc.].

EXPECTED OUTPUT

Review ask + follow-up ready to load into your messaging tool, plus reply templates for 5-star, 4-star, and negative reviews.

Step time estimate: 20 minutes to set up, 5 minutes per review reply

WORKFLOW 06 OF 20

The Reorder Draft — Inventory From Your Usage Notes

A prompt that turns your week's usage notes into a clean reorder list: what's low, what to order, and the quantities that make sense — so ordering takes minutes, not an afternoon of counting.

Estimated time-to-run: 15 minutes per week

06

ChatGPT or Claude, plus your practice management software's inventory or your paper count sheet

HOW TO INPUT

Step 1: **Jot the week's usage.** Note what ran low or ran out: medications, consumables, lab supplies — product name, rough on-hand count, and typical weekly use.

Step 2: **Paste the list and replace the placeholders** — product names and counts only; no supplier account numbers.

Step 3: **Check it against the shelf** before ordering — the AI organizes, you verify.

PROMPT

You are a veterinary practice manager organizing a weekly supply order. Given the usage notes below, produce: (1) a reorder table — product, suggested order quantity based on the usage stated (add a two-week buffer), grouped by supplier if noted; (2) flag anything that ran out entirely as URGENT; (3) flag any product where usage is climbing and suggest a one-line question to ask the team about it (more patients on this medication? wasting somewhere?). Do not invent products or prices — work only from what I list. Usage notes: [PRODUCT — ON-HAND — WEEKLY USE — one per line]. Suppliers used: [SUPPLIER NAMES].

EXPECTED OUTPUT

An organized reorder list with quantities, urgent flags, and one question per climbing product.

Step time estimate: 15 minutes per week

WORKFLOW 07 OF 20

The New-Client Welcome Sequence — First Visit to Loyal Client

A prompt that writes a three-touch welcome sequence for new clients: the day-after check-in, the two-week "settled in" note, and the annual-reminder setup — so new clients feel known from visit one.

Estimated time-to-run: 25 minutes to set up

07

ChatGPT or Claude, plus your practice management software's new-client list or email/text tool

HOW TO INPUT

Step 1: **Decide the touches.** Touch 1 goes the day after the first visit, touch 2 at two weeks, touch 3 sets up the annual reminder.

Step 2: **Replace the placeholders** — clinic name, phone, and the reminder-system opt-in wording you use.

Step 3: **Load the sequence** into your messaging tool and trigger it off each new client's first visit.

PROMPT

You are the front desk manager at a veterinary clinic welcoming new clients. Write a three-touch sequence: (1) DAY-AFTER CHECK-IN — a text under 40 words, thanks them by first name, names the pet, asks one question (how is [PET] doing after yesterday's visit?); (2) TWO-WEEK NOTE — an email under 100 words, warm, reminds them of one thing from the visit (a vaccine due, a recheck, or the pet's welcome kit), invites questions; (3) ANNUAL REMINDER SETUP — a one-paragraph email explaining how annual reminders work and when they will hear from you. Tone: neighborly, never corporate. Clinic: [CLINIC NAME]. Phone: [PHONE]. One visit detail to reference in touch 2: [e.g. NEXT VACCINE DUE, RECHECK DATE, WELCOME KIT].

EXPECTED OUTPUT

A three-touch welcome sequence ready to load into your messaging tool.

Step time estimate: 25 minutes to set up

WORKFLOW 08 OF 20

The Pre-Surgical Sheet — NPO Times and Drop-Off, No Confusion

A prompt that builds a clear pre-surgical instruction sheet — fasting times, medication holds, drop-off window, and pickup expectations — so owners arrive prepared and surgeries start on time.

Estimated time-to-run: 10 minutes per procedure

08

ChatGPT or Claude, plus your practice management software's surgery template (ezyVet, DaySmart Vet, or similar)

HOW TO INPUT

Step 1: **Note the specifics.** Procedure name, fasting cutoff (e.g., no food after 10 PM, water okay until morning), medications to give or hold, drop-off time window, and estimated pickup.

Step 2: **Paste the specifics and replace the placeholders** — pet name and client first name.

Step 3: **Review and approve.** A veterinarian checks fasting times and medication instructions for accuracy before the sheet goes out.

PROMPT

You are a veterinary surgery nurse writing pre-operative instructions for a pet owner. Draft a one-page sheet: (1) the procedure name and date in plain English; (2) FASTING — exact cutoff time for food and for water, stated twice; (3) MEDICATIONS — which morning medications to give or skip, with exact instructions; (4) DROP-OFF — the time window and where to bring the pet; (5) WHAT TO BRING (leash/carrier, any current medications); (6) PICKUP — the estimated time window and that we will call with the exact time. Plain words, numbered steps, no jargon. You are drafting only; the attending veterinarian verifies all fasting and medication instructions before this goes to a client. Procedure and date: [PROCEDURE, DATE]. Fasting rules: [CUTOFF DETAILS]. Medication holds: [LIST]. Drop-off window: [TIME]. Pickup estimate: [TIME].

EXPECTED OUTPUT

A one-page pre-surgical sheet, reviewed by the veterinarian, ready to send the day before surgery.

Step time estimate: 10 minutes per procedure

WORKFLOW 09 OF 20

The Post-Op Check-In — Day-After Texts That Prevent Panic Calls

A prompt that writes your post-surgical check-in messages — timed for the first 48 hours — so owners feel looked after and small worries get answered before they become late-night emergencies.

Estimated time-to-run: 5 minutes per surgery patient

09

ChatGPT or Claude, plus your practice management software's surgery list or texting tool

HOW TO INPUT

Step 1: **Note the surgery.** Procedure, date performed, and the one thing to watch for that is specific to this procedure.

Step 2: **Paste the details and replace the placeholders** — pet name and client first name.

Step 3: **Review and approve.** A veterinarian confirms the specific warning signs in each message before the sequence sends.

PROMPT

You are a veterinary nurse following up after surgery – you are drafting client messages, not giving medical advice beyond what the veterinarian has specified. Write: (1) the NIGHT-OF text – under 40 words, thanks them by first name, names the pet, says what normal recovery looks like tonight (groggy, not interested in food) and the clinic's after-hours number if they are worried; (2) the DAY-AFTER text – under 40 words, asks one specific question about the procedure-specific thing to watch ([WATCH ITEM]), gives the clear "call us if" line the veterinarian specified; (3) the DAY-3 text – under 40 words, checks appetite and energy, reminds them of the recheck date. Every message ends with the clinic phone number. Watch item and "call us if" line: [SPECIFIC SIGNS AS STATED BY THE VETERINARIAN]. Clinic phone: [PHONE].

EXPECTED OUTPUT

Three timed post-op texts per surgery patient, reviewed by the veterinarian before sending.

Step time estimate: 5 minutes per surgery patient

WORKFLOW 10 OF 20

The Dental Conversation — Why the Cleaning Can't Wait

A prompt that turns a dental finding into honest client education: what you saw, what dental disease means for the pet, and what the procedure involves — so owners say yes to dentals based on understanding, not fear.

Estimated time-to-run: 10 minutes per dental estimate

10 ChatGPT or Claude, plus your dental grade chart or dental estimate template

HOW TO INPUT

Step 1: **Note the finding.** Dental grade or description, what you saw (tartar, red gums, a fractured tooth), and the recommended dental procedure with price.

Step 2: **Paste the finding and replace the placeholders** — real findings only, never exaggerate the grade.

Step 3: **Review and approve.** A veterinarian confirms the explanation matches the actual diagnosis before it goes to the client.

PROMPT

You are a veterinarian explaining dental disease to a pet owner — you are drafting education, not diagnosing. Write: (1) a plain-English description of what dental disease is and what the dental grade means, in 60 words, no horror stories; (2) what I saw in YOUR pet's mouth — 2 sentences based only on the findings below; (3) what the dental procedure involves — anesthesia, cleaning, X-rays if we do them, extractions only if needed and explained; (4) an honest "what happens if we wait" — only real consequences, no exaggeration; (5) one paragraph on home dental care they can start after recovery. End with a question inviting their decision. Findings: [DENTAL GRADE, WHAT WAS SEEN]. Procedure and price: [PROCEDURE, PRICE]. Pet name: [NAME].

EXPECTED OUTPUT

A dental-education script or handout section, reviewed by the veterinarian before use.

Step time estimate: 10 minutes per dental estimate

WORKFLOW 11 OF 20

The Senior-Pet Campaign — Twice-Yearly Wellness for Golden Oldies

A prompt that builds a senior-pet wellness campaign — targeting patients 7+ (dogs) or 10+ (cats) with no visit in 6+ months — with the email, text, and in-room handout that bring them back for senior bloodwork and exams.

Estimated time-to-run: 35 minutes per campaign

11

ChatGPT or Claude, plus your practice management software's patient list (filter by age and last visit date)

HOW TO INPUT

Step 1: **Pull the senior list.** Filter patients by age (dogs 7+, cats 10+ — adjust to your practice's standard) with no visit in 6+ months.

Step 2: **Copy the counts and replace the placeholders** — species and counts, not full client records.

Step 3: **Send and track.** Text or email the list, and log responses for the follow-up call round.

PROMPT

You are a practice manager promoting senior-pet wellness. Write: (1) an email under 120 words — warm, names the pet, explains in plain English why older pets benefit from twice-yearly visits (catching small changes early), one booking ask; (2) a text under 40 words with the same message, shorter; (3) a one-paragraph in-room handout intro titled "Caring for Your Senior Pet" — plain language, mentions the senior bloodwork panel we offer by name, ends with "ask us at your next visit." No invented health statistics, no scare tactics — state only services we actually provide. Pets: [PET NAME — SPECIES — AGE, 2-3 examples]. Senior panel name and price (if quoted): [PANEL NAME, PRICE]. Clinic phone: [PHONE].

EXPECTED OUTPUT

A campaign email, a text, and a handout intro — ready to send and print.

Step time estimate: 35 minutes per campaign

WORKFLOW 12 OF 20

The Refill Reminder — Never Let a Med Run Out

A prompt that turns your chronic-medication list into a proactive refill reminder sequence — so thyroid meds, allergy shots, and heartworm preventives get refilled on time and patients never miss a dose.

Estimated time-to-run: 20 minutes per month

12

ChatGPT or Claude, plus your practice management software's prescription or refill-due report

HOW TO INPUT

Step 1: **Pull the refill list.** Filter chronic prescriptions due for refill in the next 30 days: pet name, medication, and client first name.

Step 2: **Copy the list summary and replace the placeholders** — medication names and pet first names; no client-level detail in the AI.

Step 3: **Send two touches** — a text one week before the refill runs out, and a reminder text the day it's due.

PROMPT

You are the front desk at a veterinary clinic running prescription refill reminders. Write: (1) the ONE-WEEK-OUT text — under 40 words, names the pet and the medication, says refills are ready to order with one reply, includes the clinic number; (2) the DAY-IT'S-DUE text — under 40 words, gentle, notes that a gap in [MEDICATION TYPE] can mean [the real consequence, e.g. missed heartworm prevention — only state what the veterinarian has confirmed is true for this medication]; (3) a reply template for "yes, refill it" confirmations. Never state dosage or medical advice — that stays with the veterinarian and the prescription label. Medications: [PET NAME — MEDICATION — CLIENT FIRST NAME, one per line]. Clinic phone: [PHONE].

EXPECTED OUTPUT

A two-touch refill reminder sequence plus a confirmation reply template.

Step time estimate: 20 minutes per month

WORKFLOW 13 OF 20

The Staff Meeting Agenda — The Week's Notes, Organized

A prompt that turns your week's scattered notes — schedule issues, supply hiccups, client feedback, staff shout-outs — into a tight meeting agenda with time boxes, so the meeting runs 20 minutes instead of an hour.

Estimated time-to-run: 10 minutes per week

13 ChatGPT or Claude, plus your note-taking app or the week's notes in one doc

HOW TO INPUT

Step 1: **Collect the week's notes.** As things come up, jot them in one place: what broke, what a client said, what a tech flagged, who deserves credit.

Step 2: **Paste the raw notes** — short bullet shorthand is fine.

Step 3: **Run the meeting** from the agenda; end by assigning each action item an owner and a date.

PROMPT

You are an office manager organizing a weekly veterinary staff meeting. Turn the notes below into an agenda: (1) WINS — any shout-outs or good news, one line each; (2) ISSUES — problems raised, each with one discussion question; (3) DECISIONS NEEDED — items requiring a call, each framed as a yes/no question; (4) ACTION ITEMS — carryovers plus new ones, each with an owner placeholder and a due-date placeholder. Time-box the whole thing to 20 minutes and order it wins first, decisions last. Keep it to one page. Notes: [PASTE THE WEEK'S RAW NOTES].

EXPECTED OUTPUT

A one-page, time-boxed meeting agenda with owners and due dates assigned live.

Step time estimate: 10 minutes per week

WORKFLOW 14 OF 20

The Education Handout — Flea, Tick, Food, and Weight

A prompt that drafts one-page client handouts on the topics you explain a dozen times a day — flea/tick prevention, nutrition basics, weight management — so the message lands the same way every time.

Estimated time-to-run: 20 minutes per handout

14 ChatGPT or Claude, plus your printer or PDF handout template

HOW TO INPUT

Step 1: **Pick one topic.** Flea/tick prevention, nutrition basics, or weight management — one handout per topic.

Step 2: **Note your practice's real recommendations.** The specific products you carry, the feeding guidance you actually give, the weight-loss targets you use.

Step 3: **Review and approve.** A veterinarian reads every handout for medical accuracy before it goes in the exam rooms.

PROMPT

You are a veterinary nurse writing a one-page client handout on [TOPIC: FLEA/TICK PREVENTION, NUTRITION BASICS, OR WEIGHT MANAGEMENT]. Draft: (1) a 40-word plain-English intro — why this matters for the pet; (2) three practical do's the owner can start this week; (3) two common mistakes to avoid; (4) OUR PRACTICE'S RECOMMENDATIONS — only the products and guidance below, stated exactly as given, with no substitutions and no invented claims. Plain words, no jargon without a definition. You are drafting only; the attending veterinarian verifies all medical content before this is printed. Practice recommendations: [EXACT PRODUCTS/GUIDANCE WE USE]. Common client question to answer: [ONE QUESTION].

EXPECTED OUTPUT

A one-page handout draft, reviewed by the veterinarian, ready to print for exam rooms.

Step time estimate: 20 minutes per handout

WORKFLOW 15 OF 20

The Lost-Pet Follow-Up — When the News Is Bad

A prompt that helps you write the hardest messages a clinic sends: condolences after euthanasia or loss, and check-ins when a pet goes missing — so grieving clients feel your care, not your awkwardness.

Estimated time-to-run: 10 minutes per message

15 ChatGPT or Claude, plus your sympathy-card or follow-up process

HOW TO INPUT

Step 1: **Note what you know.** Pet name, client first name, what happened, and one true personal detail — the pet's favorite treat, a funny habit you remember.

Step 2: **Paste the details and replace the placeholders** — the personal detail is what makes it real; never invent one you don't have.

Step 3: **Send it personally.** These never go through automation — sign it with the team member's name.

PROMPT

You are the practice manager at a veterinary clinic writing a personal condolence message. Given the details below, write: (1) a sympathy card note under 80 words — names the pet, names the client by first name, includes the true personal detail exactly as given, says plainly that you are sorry, invites them to reach out if they need anything; (2) if the pet is MISSING rather than lost: a separate check-in text under 40 words — asks if there is any news, offers to keep the clinic's eyes open and to call if anyone brings the pet in. Rules: warm and human, no religious language unless the client has expressed it, no euphemisms that obscure what happened, no marketing, no "let us know if you get another pet." Details: [PET NAME, CLIENT FIRST NAME, WHAT HAPPENED, ONE TRUE PERSONAL DETAIL]. Sender name: [NAME].

EXPECTED OUTPUT

A personal condolence note (or missing-pet check-in), signed and sent by hand.

Step time estimate: 10 minutes per message

WORKFLOW 16 OF 20

The Payment-Plan Explanation — Options Before Embarrassment

A prompt that builds a clear, dignified explanation of your payment options — deposit policy, third-party financing, in-house plans if you offer them — so clients hear the options before money gets awkward.

Estimated time-to-run: 20 minutes to build the script

16

ChatGPT or Claude, plus your practice's real payment and financing policies

HOW TO INPUT

Step 1: **Write down the real policies.** Deposit required before surgery? Which third-party financing do you accept? Any in-house plans, and their exact terms?

Step 2: **Paste the policies and replace the placeholders** — real terms only; never invent financing options you don't offer.

Step 3: **Train the team.** Everyone who discusses money uses the same script, so the message never varies by who is at the desk.

PROMPT

You are a practice manager writing a payment-options script for front-desk staff. Using only the policies below, write: (1) a 60-word script for introducing payment options when presenting an estimate over [\$THRESHOLD] — matter-of-fact, dignified, no pity; (2) a plain-English breakdown of each option — what it is, how it works in 2 sentences, and any real costs or terms; (3) a one-line answer for "can I pay in installments?" that states the policy exactly; (4) a closing line that separates the money talk from the medical decision. Never invent financing terms. Policies: [DEPOSIT POLICY, FINANCING OPTIONS WITH REAL TERMS, IN-HOUSE PLAN TERMS IF ANY]. Estimate threshold: [AMOUNT].

EXPECTED OUTPUT

A payment-options script the whole team can use, built only on your real policies.

Step time estimate: 20 minutes to build the script

WORKFLOW 17 OF 20

The Story Post — Social Content From Real Clinic Days

A prompt that turns real clinic moments — a successful recovery, a funny patient, a staff milestone — into social-media captions that feel genuine, because they are.

Estimated time-to-run: 15 minutes per post

17 ChatGPT or Claude, plus your phone camera and your clinic's social accounts

HOW TO INPUT

Step 1: **Capture the moment.** With the client's permission, snap the photo or note the story: what happened, the pet's name, and the one detail that made it memorable.

Step 2: **Paste the story details and replace the placeholders** — use the pet's name only with the client's written or spoken permission.

Step 3: **Post and reply.** Publish the caption and answer every comment within the day.

PROMPT

You are the social voice of a veterinary clinic. Write: (1) a caption under 60 words based only on the story below — warm, specific, one emoji at most, ends with a question that invites comments; (2) an alt-text line describing the photo for accessibility; (3) two reply drafts — one for "how cute!" comments, one for "my pet needs this" comments that answers warmly and invites them to call. Rules: never invent details not in the story; never give medical advice in comments — the reply template redirects medical questions to a call; never post a client's pet without their permission. Story: [WHAT HAPPENED, PET NAME, THE MEMORABLE DETAIL]. Photo description: [DESCRIBE THE PHOTO]. Clinic phone: [PHONE].

EXPECTED OUTPUT

A caption, alt text, and comment-reply drafts — real stories, posted responsibly.

Step time estimate: 15 minutes per post

WORKFLOW 18 OF 20

The No-Show Win-Back — Second Chances, Not Scolding

A prompt that writes your missed-appointment follow-up — firm enough to protect the schedule, warm enough to bring them back — with a real no-show policy behind it.

Estimated time-to-run: 10 minutes per day

18

ChatGPT or Claude, plus your practice management software's missed-appointment report and your real no-show policy

HOW TO INPUT

Step 1: **Pull yesterday's no-shows.** From your appointment report: pet name, client first name, appointment type, and whether it was a first or repeat no-show.

Step 2: **Copy the list and replace the placeholders** — first names only.

Step 3: **Send same-day.** First no-show gets the warm text; repeat no-shows get the policy version.

PROMPT

You are the front desk manager at a veterinary clinic following up on missed appointments. Write: (1) the FIRST NO-SHOW text — under 40 words, assumes something came up, names the pet, offers to rebook with one question; (2) the REPEAT NO-SHOW text — under 60 words, still warm, states our real no-show policy exactly as written below (deposit required next time, or the stated consequence), gives them the booking link or number; (3) a one-line internal note template for logging the outcome. Never shame, never invent a policy we do not have. No-shows: [PET NAME — CLIENT FIRST NAME — APPOINTMENT TYPE — FIRST/REPEAT — one per line]. Our real no-show policy: [POLICY AS WRITTEN]. Clinic phone: [PHONE].

EXPECTED OUTPUT

A same-day no-show text per tier plus an outcome-logging template.

Step time estimate: 10 minutes per day

WORKFLOW 19 OF 20

The Lab-Result Letter — Plain English for "Everything Looks Fine"

A prompt that turns lab results into a client letter people understand — what was tested, what the results mean, and what happens next — with the abnormal ones flagged for the veterinarian's eyes first.

Estimated time-to-run: 5 minutes per result letter

19

ChatGPT or Claude, plus your lab integration or results report in your practice management software

HOW TO INPUT

Step 1: **Sort the results.** Normal results go through this workflow; anything abnormal or borderline goes straight to the veterinarian for a call, not a letter.

Step 2: **Paste the normal results and replace the placeholders** — pet name and client first name; test names and values as reported.

Step 3: **Review and approve.** A veterinarian checks the letter's interpretation of the results before it sends.

PROMPT

You are a veterinary nurse writing a lab-results letter to a pet owner — you are drafting only, not interpreting results beyond what the veterinarian has stated. Write: (1) a 2-sentence opener naming the pet and the tests run; (2) a plain-English line per test — what it checks and what the result means, using only the veterinarian's stated interpretation below, never inventing one; (3) the next step — recheck date, continue medication, or "nothing needed until the next visit"; (4) a line inviting questions with our phone number. If any result was marked abnormal or borderline, stop and write instead: "Results need the veterinarian's review before a letter can be sent." Tests and vet's interpretation: [TEST NAME — RESULT — VET'S INTERPRETATION, one per line]. Next step: [STATED NEXT STEP]. Clinic phone: [PHONE].

EXPECTED OUTPUT

A plain-English results letter for normal results, reviewed by the veterinarian — abnormal results route to a vet call.

Step time estimate: 5 minutes per result letter

WORKFLOW 20 OF 20

The Monthly Numbers Review — One Page, Real Decisions

A prompt that turns your month-end figures into a plain-English action plan: what's up, what's down, and the three moves for next month — no accounting degree required.

Estimated time-to-run: 30 minutes per month

20

ChatGPT or Claude, plus your practice management software's month-end report (revenue, visits, new clients) and your bookkeeping summary

HOW TO INPUT

Step 1: **Gather the numbers.** From your software and books: gross revenue, visit count, new clients, average invoice, and the previous month for comparison.

Step 2: **Paste the figures and replace the placeholders** — aggregate numbers only, no client-level data.

Step 3: **Run the plan.** Assign each action to a person and a date.

PROMPT

You are a no-nonsense business advisor reviewing a veterinary practice's month. Given the numbers below, write a one-page plan: (1) the headline – one sentence on how the month went versus last month; (2) three actions for next month, each with an owner (owner, practice manager, lead tech) and a done-by date – specific and small enough to actually finish; (3) one thing to stop doing. Base everything only on the numbers given – do not invent costs, margins, or industry benchmarks. Numbers: [GROSS REVENUE, VISIT COUNT, NEW CLIENTS, AVERAGE INVOICE, LAST MONTH'S SAME FIGURES]. Services by revenue (if tracked): [SERVICE – REVENUE – one per line].

EXPECTED OUTPUT

A one-page monthly action plan: headline, three owned actions, one thing to stop.

Step time estimate: 30 minutes per month

Your AI stack

Every playbook ends with the stack — the minimal set of subscriptions this work actually requires, and the ones to skip. AI subscription confusion is a real adoption barrier: too many tools, overlapping jobs, money leaking every month to dashboards nobody opens. Here is the honest minimum for a veterinary practice.

What you need

One AI assistant subscription. This is the machine you author with: the one that drafts your client communications, handouts, and reminder messages, and does the “figuring out” before anything goes to a client. ChatGPT or Claude — pick the one you actually open every day. One, not both. The test is usage: if you open it daily, it earns its place; if you open it monthly, it doesn’t.

Your practice management software — the one you already pay for. ezyVet, DaySmart Vet, or similar. The workflows in this book are written for its medical records, its appointment reminders, and the client communications already inside it — not around them. This is not a new subscription; it is a job for a tool you own. One non-negotiable that is not a subscription: a veterinarian reviews every AI draft before it reaches a client or a medical record. The stack is what the workflows stand on — this rule is part of the foundation.

What to skip

A second, overlapping AI subscription. Two assistants doing the same authoring job is paying twice for one job. Pick one and commit.

A paid AI add-on your software vendor upsells until it earns its keep — and anything that would put AI output in front of clients or into records without veterinarian review. The assistant plus the communications already in your system covers every workflow in this book.

Anything sold as “AI” that you can’t assign a weekly job. The standing test for every subscription: name the job it does each week. If you can’t name it, cancel it. Check quarterly — stacks grow back like weeds.

The minimal stack

NEED: - ONE AI assistant subscription (ChatGPT or Claude) — pick the one you open daily; this is what you author with - Your existing practice management software (ezyVet, DaySmart Vet, or similar) — records, reminders, and client communications you already pay for

SKIP: - A second overlapping AI subscription — paying twice for one authoring job - Paid AI add-ons until your numbers prove the need — and anything that skips veterinarian review - Anything you can’t assign a weekly job — name its job each week, or cancel it

Review quarterly. Stacks grow back like weeds.

Thank you

Thank you for reading — and for doing the unglamorous part. Writing the discharge instructions a worried client can actually follow, calling back on the lab result, sending the condolence note: none of it is exciting. All of it is the difference between a practice clients trust with their family and one they leave.

If this book has a single sentence, it is the one SkillForge AI was built on: we don't lie, we don't steal, we offer value. Let a veterinarian review every AI draft before it reaches a client or a record. Describe only what was observed. Send follow-ups worth receiving — and when you find a claim you can't prove, either prove it or remove it the same day. The AI will make you fast. The ethic is what makes you worth trusting.

Go run your next workflow like it matters. Because it does.
